For the sale and consumption of their provisions they rely on their merit. It is a fact worth knowing that all their goods are in original packages direct from their packing-houses, and any provisions with the stamp and trademark of Armour Packing Company are warranted to the trade and the consumer.

It has been rumored that if sufficient inducements were offered this house would erect a great plant on the Pacific Coast.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. Korbis—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,

DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

Dr. J. Korbis, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,

E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

2 & 4 Sutter St., cor. Market San Francisco

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 28, 1888.

Two days of strong, drying north winds the past week, caused some uneasiness, but as they died out and were followed by dews at night and a generally moist atmosphere, all fears are allayed. Crop prospects of all kinds were never better, the only trouble now being the high transcontinental freight rates. Trading in farm products was fairly active during the week. Eastern and European telegrams reported steady, strong wheat markets up to Monday, when an advance came through. The following is to-day's cable:

LIVERPOOL, March 28.—Wheat—Firm. California spot lots, 65 6d to 6s 8d; off coast 33s@33s 3d; just shipped, 33s; nearly due, 33s; cargoes off coast and on passage, steady; French country markets, quiet and perhaps lower; wheat on passage to Continent, 211.000 qrs.; wheat and flour on passage to U. K., 2,061 000 qrs.; wheat and flour in Paris, quiet.

Foreign Review.

LONDON, March 26.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says that the values of English wheat continue against sellers, quotations ruling 7d and lower. The sales of English wheat during the week were 59,824 quarters at 30s 6d, against 43,969 quarters at 33s 2d during the corresponding period last year. The reports from the country show that the wheat growth is excellent, and that no harm has been done by frosts. There has been labored selling of foreign wheat at a reduction of 6d. Flour is dull, but the receipts continue to increase. Corn is steady and barley maintains its recent advance of 3d.

California Products in Chicago.

CHICAGO, March 24.—Oranges rule steady and firm for choice fruit. The arrivals and offerings of such are very moderate, while a fair demand exists. Off grades of stock are rather slow.

Quotations are: California Riverside oranges, \$3.25@3.05; do, other kinds, \$2.75@3; do, No. 2, other kinds, Windfalls, \$1.75; do, Riverside Navel, \$5.50@6; do, other kinds, \$3.50@4. California lemons, \$1.50@1.75 per box.

California dried fruits are about steady. The supply is fair, as dealers have no difficulty in obtaining what they require at about former prices.

We quote: Peaches, sun-dried, in sacks, 1/2 lb, 11@12; do, evaporated, unpeeled, in sacks, 1/2 lb, 13@15; do, boxes, 1/2 lb, 14@16 1/2; do, peeled, in sacks, 1/2 lb, 17@21; do, in boxes, 1/2 lb, 22@25; apricots, sun-dried, in sacks, 1/2 lb, 10@11; do, evaporated, in sacks, 1/2 lb, 12@16; plums, pitted, in sacks, 1/2 lb, 11 1/2@12 1/2; prunes, small, 1/2 lb, 8@10; do, fancy large, 1/2 lb, 13@14; nectarines, according to quality, in sacks, 1/2 lb, 5@12 1/2; raisins, loose Muscates, two-crown, 1/2 box, \$1.35@1.45; do, three-crown, 1/2 box, \$1.50@1.65; do, London layers, 1/2 box, \$2.25@2.35.

California strained honey, 7@8c.

The demand for beans showed no improvement. The jobbing trade is fairly supplied and this causes the demand on the open market to remain rather limited. Prices are about the same as quoted for a day or two past. At the present prices stocks on hand are steadily held, although holders would like to see a little more doing than there is being done. California, according to quality, \$2@2.60.

Hops are ruling rather dull and slow. The demand is limited and only choice grades are called for. Common stock is very dull. Pacific Coast, choice, 1/2 lb, 12 1/2@13; Pacific Coast, common to prime, 1/2 lb, 9@12c.

Eastern Wool Markets.

NEW YORK, March 26.—There has been no marked change of features in wool. Former prices have been well supported, but no one seems disposed to negotiate large loans outside of market report. There have been reduced transactions. The following sales have been made: 8000 lbs California scoured at 40¢@45¢, 15,000 Oregon at 20¢@22¢, 20,000 Territory at 16¢@22¢, 5000 fall Texas, 16¢, 10,000 quarter blood at 35¢, 4000 XXX at 35¢, 3000 XXX and above at 32¢, 5000 XX at 35¢, 15,000 coarse washed fleeces 34¢, 55,000 Montevideo at 26¢@27¢, 20,000 Cape at 26¢.

BOSTON, March 26.—The total wool sales for the week are: Foreign, 317,000 lbs; domestic, 1,627,000. There were sales of 60,000 lbs California spring and Oregon, and 5000 lbs California fall, all at private terms.

Eastern Grain Markets.

CHICAGO, March 28.—Wheat—Lower; cash, 72 1/2¢; April, 72 1/2¢; May, 72 1/2¢. Oats, steady; May, 31 1/2¢. Barley, nothing doing.

NEW YORK, March 28.—Wheat—91 1/2¢ for cash, 89 1/2¢ for March, 89 1/2¢ for April, 89 1/2¢@89 1/2¢ for May, 88 1/2¢@88 1/2¢ for June and 87 1/2¢ for July.

California Raisins.

NEW YORK, March 26.—California raisins are finding a ready and wider distribution, buyers offering little or no opposition to the new prices established for the best brands. This feature is confidently referred to. The control of the stock in this market is in the hands of three concerns, and a large holder does not hesitate to say that a further advance soon is among the strong probabilities, intimating that a \$2 market for the best three-crown loose is now contemplated.

Miscellaneous.

NEW YORK, March 26.—Hops from the Pacific quiet at 4@12c. There is some home call for States at 8@14c. Beans are firm. Mustard seed, 3 1/2¢@4c. California unpeeled evaporated peaches, 14@18c, and stocks running out.

Local Markets.

BAGS.—The pool apparently is keeping quiet. The demand is only fair, as farmers only contract for part of their expected wants, preferring to wait future developments before buying all. Calculus are quoted at 8c cash, 8 1/2¢@8 1/2¢ for June-July, with some holders asking slightly more.

BARLEY.—With continued hammering of the market on Call by the bears with about all sales re-

ported cross orders so as to break prices for actual barley, farmers having barley have a serious time. Large holders say that prices have gone so low that it will pay to hold. Choice brewing and Chevalier are firm. On Call sales reported were downward up to Saturday, when they began to gain strength. The following are the sales reported to have been made on Call to-day:

Morning Session: Buyer season—200 tons, 80 1/2¢; 200, 80 1/2¢. Buyer 1888—200 tons, 80 1/2¢. Afternoon Session: Buyer season—500 tons, 80 1/2¢; 300, 80 1/2¢; 300, 80 1/2¢. Buyer 1888—100 tons, 80 1/2¢; 100, 80c; 200, 88 1/2¢ per ctl.

BUTTER.—Messrs. Hegler, Johnson & Co. furnish the following: Receipts from January 1, 1888, to March 22, 20,070 boxes; stock on hand March 22, 670 boxes and 824 bbls. Receipts for the like time in 1887, 21,964 boxes; stock on hand March 24, 1887, 1171 boxes and 56 bbls. The market under liberal receipts and warmer weather has tended down, admitting of packing, which is being done. Pasturage in some places is getting scarce.

CHEESE.—Receipts from January 1, 1888, to March 22 were 16,078 cheese against 21,617 for the like time in 1887. The stock on hand on March 22, 1888, was 2077 cheese and on March 24, 1887, 2052. The market is tending down under freer receipts and increasing stocks. Considerable reductions on quotations are being made for round parcels.

EGGS.—Market strong and higher, but it is expected it will go off again after this week. The consumption this week is large.

FLOUR.—Market steady, with a strong tone. Millers report a scarcity of choice wheat.

WHEAT.—Buyers still bearing, but holders of choice will not sell, preferring to carry it over into another season. Stocks in the State are light. Trading the past week was light. On Call the bears by cross orders keep prices from advancing so as to buy actual wheat cheaper. To-day's reported sales are as follows:

Morning Session: Buyer season—600 tons, \$1.35; 100, \$1.34 1/2; 100, \$1.34 1/2; 1000, \$1.34 1/2. Buyer 1888—100 tons, \$1.41 1/2; 300, \$1.41 1/2. Afternoon Session: Buyer season—400 tons, \$1.34 1/2; 400, \$1.34 1/2. Buyer 1888—100 tons, \$1.41; 400, \$1.40 1/2; 500, \$1.40 1/2; 200, \$1.40 1/2; 300, \$1.40 1/2 per ctl.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Mar. 26, '87.	July 1 '87 to Mar. 24, '88.
Flour, qr. sks.....	3,471,803	2,824,479
Wheat, ctls.....	10,768,399	7,187,175
Barley, ctls.....	1,956,876	1,919,766
Oats, ctls.....	116,038	145,621
Potatoes, sks.....	712,259	916,956
Corn, sks.....	77,268	174,588
Rye, sks.....	20,522	15,262
Buckwheat, sks.....	5,547	2,979
Beans, sks.....	404,164	371,660
Bran, sks.....	367,583	383,262
Hay, tons.....	80,528	92,499
Salt, tons.....	17,768	12,710
Wool, bls.....	46,140	40,525

Rye, ctls.....	4,798	4,798
Potatoes, sks.....	102,083	62,463

Cereals.

Eastern telegraphic advices report considerable damage to the growing wheat by the thawing and freezing weather in several of the States. This is rather unfortunate, for the acreage seeded up to March 1 was below an average. The blizzards reported on Sunday and Monday last are calculated to injure crops still more, and necessitates a large area to be reseeded.

The Government Department of Agriculture report, March 1, makes 132,000,000 bushels of wheat remaining in the hands of farmers in the United States March 1, 1888, against 122,000,000 bushels March 1, 1887. The visible wheat, the flour stock and the quantities in elevators outside of those included in official Exchange report is, including the California, Oregon and Washington stocks, a very considerable quantity. The Cincinnati *Price Current* makes the quantity held by farmers 107,000,000 bushels; plus visible 38,000,000 bushels, is 145,000,000 bushels, against 179,000,000 bushels March 1, 1887; including interior supplies and the visible, and 159,000,000 bushels March 1, 1886, including interior supplies and the visible. That journal makes the quantity 25,000,000 bushels less than the Government estimate. The Department of Agriculture's short estimate of the wheat crop of 1886, as shown by the *Price Current*, may have had some bearing upon this difference of 25,000,000 bushels between these two authorities.

Oregon advices are, taken as a whole, not so favorable for the wheat crop as at this time last year. The market in Oregon is reported very strong for choice wheats, with holders indifferent sellers at last week's quotations.

In this State, crop advices continue of the most flattering character. The wheat plant in parts of Tulare and Fresno counties is said to be about two feet high. Strong north winds swept over several counties the past week, but so far as can be ascertained did not do any material damage.

The wheat crop of Europe ranges from 1,152,000,

000 bu. minimum to 1,288,000,000 bu. maximum. The wheat consumption of Europe is on the average about 1,333,000,000 bu. of wheat. Some of the countries of Europe are exporters of wheat, and others both importers and exporters of wheat. The average quantity to be obtained from countries without Europe is about 161,000,000 bu. The wheat crop of Europe was in 1887, 110,278,786 bu. above average, which quantity the exporting countries of Europe have available for export if they sell so as to command buyers. India will probably have at least 30,000,000 bu. of her new crop for export. It is claimed Australia will have 16,000,000 to 20,000,000 bu. for export. The United States and Canada still have available for exportation about 45,000,000 to 50,000,000 bu. of wheat. The new crop of Chili may give 4,000,000 bu. surplus for her wheat crop just harvested, and the Argentine Republic also may contribute 5,000,000 to 6,000,000 bu. from her crop just harvested. Austria-Hungary had in 1887 the largest wheat crop for 10 years, and but a small proportion of her surplus has so far been exported. Egypt, that in 1886-87 exported scarcely any wheat, has harvested an average crop, and will probably have a full average surplus. Roumania had a large wheat crop in 1887. It will be observed that after a careful analysis of all these sources of supply there is no probable demand in sight to create a deficiency in any country sufficient to cause an advance of much moment in values, unless war or damage to growing crops shall intervene as a moving power for a rise. The following table shows the average wheat production of European countries for 10 years, compared with the wheat crops of 1887, 1886 and 1885:

	Wheat crop, 1887.	Wheat crop, 1886.	Wheat crop, 1885.	Ten years' average wheat crop.
Russia.....	271,200,048	192,000,000	228,000,000	230,516,979
France.....	311,463,816	304,480,739	312,924,137	306,500,455
U. Kingdom.....	78,627,169	65,285,353	82,145,888	78,082,750
Germany.....	34,568,088	32,000,000	106,973,750	103,711,321
Denmark.....	4,732,590	4,731,531	4,897,947	4,766,222
Holland.....	5,050,416	4,937,250	4,965,625	5,594,323
Belgium.....	19,790,196	18,514,888	19,573,926	22,261,975

Total bu. 1,262,634,838 1,141,602,183 1,235,941,530 1,172,365,052

It will be seen that the yearly average of European wheat production for a period of about 10 years is about 1,172,365,052 bushels, the basis being chiefly from official figures, some of the unimportant countries being estimated or partly estimated. The production in 1886 was 63,585,478 bushels above the average, and that of 1887 was 110,278,786 bushels above average, and that of 1888 was 30,753,869 bushels under average. The Russian wheat production, according to the official estimate, including Poland and Finland, is 50,683,069 bushels above the average of 10 years. The population of Europe in 1886 was 347,000,000, and the annual increase in the population for 26 years has been less than 1 per cent. With all industries in their normal condition, the consumption of wheat should show an increase of less than 1 per cent annually. The rye crop of Europe averages rather more than 1,000,000,000 bushels annually. The rye crop of Russia was in 1887 about 96,000,000 bushels larger than in 1886, and is upward of 700,000,000 bushels. The population of Russia is about 90,000,000. The bread of the Russians is chiefly black bread made from rye. This increase in the Russian rye crop in 1887 increases Russia's ability to export wheat, which also showed an increase in 1887-86 of about 50,000,000 bushels.

Telegraphic advices the past week report in England and parts of the continent a real genuine blizzard, followed by heavy snowstorms and changeable weather. The unseasonable weather has no doubt done considerable damage to the young wheat plant, besides delaying outdoor work, which will put back this year's harvest. In France, wheat crop advices are far from satisfactory when compared with this month last year, and as the stock in that country is light and very much less on the way, it is claimed that higher values are liable to obtain before next harvest.

The wheat market the past week has been dull, with buyers reported indifferent, except for parcels favorably situated that can be used for either stiffening or topping off. The small number of vessels in port under charter restricts trading, and as crop advices are good, the disengaged tonnage are held for better prices. The high charters offered for nitrate loading for Europe has taken quite a number of vessels away in ballast so as to load that kind of cargo. Wheat has sold the past week in this city at quotations. Milling grades are very scarce and wanted. For a gilt-edged article, over \$1.40 would be paid, but there is none of this grade offering for sale.

Barley prospects in this State are favorable, but the acreage seeded less than last year, while the low price ruling for barley will cause many to cut their fields for hay. Take the price of bags, freight charges and other charges, and the outlook for farmers to come out even is rather discouraging, unless prices advance for the new crop. Every one appears to be bears, and the daily papers are aiding them all they can so as to keep prices down and against farmers. The consumption of feed barley was never so large as now, but then there is no speculative or bull movement calculated to advance prices, which are the lowest for many years. For choice brewing and choice Chevalier, there is a good demand, but buyers are slow to pay asking prices. Eastern advices report light supplies, and choice still tending upward.

Corn is very strong at quotations, under higher prices at the East, and a good demand here. Choice grades are scarce.

Oats, if choice, find ready sales, but poor grades are slow and hard to place; even concessions do not tempt buyers.

Eastern rye continues to be offered on the market at \$1.85@2, the latter for the more choice. The demand is only fair.

Fruits.

Crop advices continue favorable. The weather is all that can be reasonably desired. It is conceded that this year's crop of fruits will be, as a rule, superior to former seasons, owing to more attention given to pruning and cultivation of the trees. It now looks as if the changeable weather at the East has done considerable damage to the fruit in several

of the earlier fruit sections, and if so, it will materially assist our market. Horticulturists will confer a very great favor by informing the writer by letter or postal card of the crop prospects in their sections, and other items of interest. Address J. R. Farish, San Francisco, Cal.

Apples are slow and hard to sell, owing to their generally poor quality and the lateness of the season. Berries have not put in an appearance yet, and none are looked for until well into April. The crop will be large, but the consumption will also be large.

In citrus fruits the market is very strong, with a good shipping and local demand for choice oranges. Poor are hard to sell, even at the low prices. Lemons and limes are steadier, with a better call.

In dried fruits there is more doing, with several carloads sent to Eastern points the past week. Choice bright are in light stock, but dark-colored are in liberal supply. It is claimed that the spring demand will soon clean up the stock now here. Apples are gaining in strength.

In raisins, the market is very strong for standard packs, which are about out of market. Some concessions are made so as to clean up. In outside packs the market is quotable at from 5c to 10c per box higher. The stock of all kinds is light, while the demand is improving in a small way.

Live-Stock.

Bullocks and mutton sheep are fairly steady, although receipts of dressed, from distant points, have somewhat of a disturbing character, owing to the unknown quantity that can be thrown on the market. With warmer weather and more liberal supplies of vegetables, the consumption, it is thought, will not be free. Hard grain-fed hogs continue scarce, and are wanted at full quotations; block hogs are wanted in preference to the large heavy. Spring lambs and calves are wanted. Milch cows are in good request. Dairy cows about 5 or 6 years old, average milkers, sell at \$30 to \$40. For family use, good free milkers, kind disposition, sell as wanted at \$45 to \$60 here. The price of cows depends on the urgency of the buyer, quality and quantity of milk, and also disposition. In horses, there is nothing new to report. Last week's report covers this week's market.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is, animals running at large).

HOGS.—On foot, grain-fed, 6 1/2¢@6 3/4¢ per lb.; dressed 9¢@10¢ per lb.; soft, 5 1/2¢@6 1/4¢ per lb.; dressed, 7¢@10¢ per lb. Stock hogs, 3 1/2¢@5 1/2¢ per lb.

BEEF.—Stall-fed, 8 1/2¢ per lb.; grass-fed, extra, 7 1/2¢@8¢ per lb.; first quality, 7¢ — per lb.; second quality, 6 1/2¢ — per lb.; third quality, 5¢@6¢ per lb.

VEAL.—Choice, 12 1/2¢@15¢ per lb.; fair to good, 8¢@10¢ per lb.

MUTTON.—Wethers, 8 1/2¢@9¢ per lb.; ewes, 8¢@8 1/2¢ per lb.; lamb-spring, 12 1/2¢@15¢ per lb.

Feedstuff.

The call continues freer for bran and middlings, good for ground barley, and fair for feedmeal and cracked corn. The latter is very strongly held, while the others are barely steady.

Alfalfa hay continues in buyers' favor, but other kinds are strongly held at full prices. It looks as if farmers are selling closer than ever before, so as to take advantage of the present high prices. The consumptive demand is good.

Vegetables.

Continued favorable, except for two days, weather for garden truck has been experienced the past week, and in consequence vegetables begin to make a better showing.

Asparagus is coming in freely, causing prices to steadily shade off. Green peas are, as yet, in light receipt. Rhubarb continues to decline under liberal receipts. Cucumbers are still high, as are tomatoes. Mushrooms are in fair receipt, with the market firm.

Potatoes are slow and in buyers' favor. Dealers and consumers buy sparingly, owing to the advanced season, and also owing to the generally poor keeping qualities. New potatoes come in fairly well, but they are of small size and poor quality, which cause them to move slowly. When ripener and of better size, heavy shipments, it is expected, will be made to the East.

Onions are firm at full quotations for choice good keepers; poor are slow.

Miscellaneous.

Poultry ruled fairly steady throughout the past week.

Beans are firm, but not so active. Supplies are light.

In ham, bacon and lard there is a good trade, with the market firm and tending up.

Tallow is not quite so strong. Hides are weak.

In wool there is absolutely nothing doing. The East reports a strong growing market for the better grades, although buyers fight against an advance, using the "bugbear" tariff as the scarecrow, forgetting that the markets throughout the world are not only higher than a year ago but advancing.

Hops, if choice, find ready buyers, but poor and irregular are hard to sell. Choice hops at the East and in Europe are wanted, but poor move slow.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	382,275	209,617
In port, disengaged.....	49,146	111,594
In port, engaged.....	20,447	21,440

Totals..... 451,868 342,651
To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, March 28, 1888.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

COFFEE-CULTURE on a large scale is again talked of in the Hawaiian islands.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

WEDNESDAY, March 28, 1888.

Injurious Insects of the Orchard, Vineyard,
Field, Garden, Conservatory, etc.,

—WITH—
Remedies for their Extermination.
By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the interests of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

COMPANY, 725 Market St., Bancroft History Building, S. F., Cal.

Dewey & Co.'s Scientific Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

complete machines. We have agents all over the United
States who are making \$10 to \$30 per day selling these
pumps. We give their names and addresses in catalogue. To
introduce it we will send a Sample Pump, express paid, to
any express station in the U. S. for \$5.50. Made of brass,
will throw water from 60 to 60 feet, and retails for only \$6;
Indispensable for spraying fruit trees. The Potato Bug
Attachment is a wonderful invention. They sell rapidly.

AGENTS WANTED EVERYWHERE. Send at once for illustrated catalogue, price list and terms. Goods Guar-
anteed as Represented or Money Refunded. Address LEWIS & CO WLES, Catskill, N. Y.

HAY PRESSES!

THE HURRICANE—Size A.

A mounted, horizontal double-ender. Size of bale,
when in the press, 17x22-40 inches. Average weight of
bale, 220 pounds. Capacity, from 16 to 25 tons per day.
Uses 4 men and works with 2 horses. REQUIRES NO
TRAMPING. Puts 10 tons or over in a box car.

Price.....\$1000.

THE HURRICANE—Size B.

Size of bale in press, 22x24x46 inches. Average
weight of bale, 260 pounds. Capacity, from 20 to 35
tons per day. Uses 5 men and works with 1 or 2 horses,
at option of baler. REQUIRES NO TRAMPING. Uses rope
or wire. Puts from 7 to 8 tons in a box car.

Price.....\$1000.

The SELF-TRAMPING JUNIOR MONARCH

Size of bale in press, 22x24x46 inches. Average
weight of bales, 260 pounds. Capacity, from 15 to 25
tons per day. Uses 3 or 4 men, at option of baler.
Works with 1 or 2 horses. Uses rope or wire. DOES ITS
OWN TRAMPING. Puts from 7 to 8 tons in a box car.

Price.....\$500.

THE MONARCH.

Same principle as Junior Monarch, only smaller and
heavier. Size of bale, when in press, 17x20x40 inches.
Average weight of bale, 220 pounds. Capacity, from 12
to 20 tons per day. Requires 3 men and 2 horses.
Uses wire only—rope will not hold. DOES ITS OWN TRAMP-
ING. Puts 10 tons or over in a box car.

Price.....\$600

THE GENUINE PRICE PETALUMA.

Size of bale in press, 24x24x50 inches. Average
weight of bale, 230 pounds. Capacity, from 10 to 15
tons per day. Requires 4 men and 2 horses. Uses rope
or wire. Hay has to be tramped into the press. Puts
from 5 to 6 tons in a box car.

Price.....\$350.

THE IMPROVED EAGLE.

Size of bale in press, 26x26x50 inches. Average
weight of bale, 235 pounds. Capacity, from 10 to 15
tons per day. Requires 4 men and 2 horses. Uses rope
or wire. Hay must be tramped in the press. Puts from
4 1/2 to 5 1/2 tons in a box car.

Price.....\$250.

The above is the finest line of Baling Presses in the
United States. They are nearly double the capacity of
those of other makers.

One of these Stackers, with two Rakes, will
Stack 50 Tons a Day; with four
Rakes, 100 Tons a Day.

Jackson's Improved "Eclipse" Stacker and Loader. \$100.

With the rakes the hay is taken from the swath, when cured, just as left by the mower, or from the cock or windrow, if it is desired to rake it before it is cured sufficiently to stack; and when the Rake is loaded it is driven to the Stacker, the rake-teeth entering between the pitcher-teeth; the hay is pressed forward against the pitcher-head, the horses then back the Rake off, leaving the hay in a compact mass upon the pitcher, and return to the field for another load. As soon as the Rake is out of the way, the horse attached to the pitcher rope is started, elevating the load the desired height, when the latch-rope is pulled, and the hay is dropped in the center of the stack, the horse is backed up, the pitcher being brought back to the ground by its own weight, ready for another load.

I have adopted the "ECLIPSE" as my standard Stacker and Loader. I mount it on wheels, which are not shown in the picture. It builds stacks 30 feet high, and the load may be "tripped" at any point, after the horse is started, varying with height of stack, or of load on wagon. This feature is peculiar to the "ECLIPSE," and of great importance, enabling the farmer to stack hay in the windiest weather, as it does not carry all the hay up over itself, regardless of height of stack, but dumps it just where wanted, and the hay, while being elevated, is held so that the wind cannot scatter it.

It is light, yet strong enough to lift the heaviest rake load; easily and quickly moved; requires but one stake.

Weight, 1500 pounds. Price, \$100.

"ECLIPSE" HAY STACKERS AND LOADERS AND "ACME" RAKES,

MANUFACTURED UNDER THE "ACME" AND OLIVER PATENTS

—BY—

Byron
Jackson

SAN FRANCISCO,
CAL.

Jackson's Improved "No. 3" "Acme" Rake and Buck Combined. \$50.

Does the work of all other Hay or Horse Rakes, viz., wire rakes, sulky rakes, revolving rakes, buck rakes and "go-devils." It rakes from the swath, and leaves the hay in large bunches at once, requiring no hand-work. One man and two horses will keep up with two mowers, following the mower as soon as the hay is wilted enough to be raked clean with any rake. It rakes CLEANER. The hay will cure quicker without bleaching by dew or sun. Very large bunches can be made by pushing two or more rakes into one.

If raked and bunched by my Improved "Acme" Rake, the hay is in very much better shape to reload and deliver on the Stacker evenly and level (loading the rakes all they will carry to the stack), and spreads well over the stack, saving labor in stacking, because it has not been tangled, as it is when gathered with the sulky or revolving rake. It also saves waste of leaves and seeds, and gathers the hay clean of trash, such as old stubble, stalks and lumps of dirt. Bear in mind that wind-rowing hay with any rake is labor thrown away, and is detrimental to the heat and most economical working of the "ECLIPSE" Hay Harvesting Machinery.

These rakes, as offered for this season, are an improvement over all others. They have high wheels (34-inch), with wide tires (4-inch) (not shown in the cut), and the patented ratchet-lever device, which enables the driver to easily raise the heaviest load.

Weight, 650 pounds. Price, \$50.

Merinos Then and Now.

Solomon W. Jewett, who was a pioneer in the wool interest of California, was about 50 years of age when he brought pure-bred merinos to this State in 1859 as described in our issue of Oct. 1, 1887. Before that time he had done important work in aiding in the upbuilding of the merino interest of Vermont, and one of our engravings shows the portrait of the merino ram Fortune which Mr. Jewett owned in 1840 and which was counted one of the best sheep of his day.

Solomon W. Jewett traces his ancestry to their residence over 200 years ago in Lincolnshire, England, where they were wool-carders and weavers of dress goods. The members of the family who came to Massachusetts about 200 years ago pursued their vocation of carders and weavers. Afterward later generations of the family went into Vermont, and there the grandfather and father of Solomon W. Jewett were prominent flock-owners. Mr. Jewett himself began collecting a flock when he was seven years of age, and when he was ten years old he put out his sheep at an income of one pound each per annum. In 1830 the old homestead and a portion of the landed estate fell into his hands. By diligence in continued breeding and letting, at 26 years of age he was the largest owner of sheep in the State. He began to breed from thoroughbred Spanish stock in 1839, crossing up with Don Pedro, a two-year-old which produced, the next coming clips, 28 pounds in two brook-washed fleeces. In the meantime he procured Fortune, a still superior ram, a pure descendant on the side of the dam from the flock of Manuel Godoy, whose stock was considered by Consul Jarvis the most desirable in Spain. It was acknowledged in 1840 that Fortune at that date had never been excelled in the amount and evenness of wool. He was fairly covered with prizes and medals at the leading fairs of the time. The portrait of Fortune which we give on this page was engraved from a fine painting by Dr. Arthur W. Saxe, who did fine work in art in his old home in Vermont, and is now a leading physician in Santa Clara in this State. Mr. Jewett assures us that the engraving of Fortune which we present was the first illustration of a Spanish merino ram that ever appeared in American agricultural literature.

We use the portrait of Fortune for several reasons; first, the historic interest pertaining to it; second, the fact that the two gentlemen who were, one owner and the other artist, in Ver-

mont nearly 50 years ago are now well-known residents of California; and third, because by using Fortune in connection with engravings of two prominent merino rams of this day, our

g. g. dam bred by E. S. Stowell, Monroe No. 319 was sired by F. D. Barton's Wrinkley 273, dam by Reliable 285, g. dam by Torrent 71, g. g. dam by F. H. Dean's Wrinkley 58.

MERINO RAM FORTUNE, OWNED IN 1840 BY SOLOMON W. JEWETT.

wool-growing readers may have a chance to compare the past with the present in merino development.

The larger illustration represents two merino

They clipped last spring respectively 33 and 30 pounds, 345 days' growth of fleece. His ewes averaged about 16 pounds. He also has a ram lamb, 7 months old, sired by Monroe 319, that

Selling Fruit at the East.

We have had the privilege of looking over a lot of letters received by the secretary of the California Fruit Union in answer to the circular we published recently, asking all stockholders to state their views on the question of selling fruit at the East by auction. A hurried calculation by Secretary Fairbank from the pile of letters seems to indicate that the replies, merely considered numerically, are about ten in favor of the auction method to one against it, but considering the opinions in connection with the amounts of fruit those who hold them usually ship, and the result is wholly reversed, for while about a hundred letters in favor of the auction plan are from those who ship in the aggregate perhaps 100 carloads of fruit, the 10 letters against the auction are from those who ship several hundred carloads. This calculation is not put forth as accurate, but merely to indicate that while the prevailing sentiment of the stockholders is in favor of the auction, the sentiment of those who ship the most fruit is against it.

There is another consideration apparently involved. The stockholders in Vaca and Pleasant valleys are united in opposing the plan. Their argument is that as their fruit goes to market first they would have to stand all the risk of the experiment, which they do not propose to do. The census of opinion on the

matter results about as we expected—in fact we did not see that the auction method had much show of enactment under the new management of the Fruit Union. It is, of course, plain that the Union now has the shippers' interest predominant, and the shippers generally have not favored the auction method. The disposition of most growers so far as we have heard it is to continue with the organization this year and give the new management a chance to demonstrate its faith by its works. It is a fact that growers generally have not participated in the organization as was expected, but have left it to a few. Though the matter is of the utmost importance in its possible bearing upon fruit values this year, it is impossible for an outsider to predict the course which

will ultimately be pursued, and we can only await further developments.

It is thought that the population of California has doubled within the past 10 years. The census of 1880 gave the State 864,694, and that was before the great tide of Eastern immigration had commenced.

MERINO RAMS BATAVIA AND MONROE, PROPERTY OF L. C. WALDBRIDGE, KANSAS.

rams owned by L. C. Walbridge, Russell, Kansas. The pedigrees of the rams Batavia 209 and Monroe 319, which stand at the head of his flock, are as follows: Batavia No. 209 was sired by L. P. Clark's noted ram, No. 128, generally known as Money Maker, dam sired by Longfellow No. 85, and g. dam by Addison 100, g. g. dam by R. T. Sampson's stock ram, and

weighs 70 pounds. Mr. Walbridge is one of the most progressive breeders of the West, and his establishment is widely known.

California flock-owners have not had much to say of their affairs in the RURAL of late. When the free-wool issue is buried next fall they will no doubt be heard from again.

THE STABLE.

Breeding Trotters from Thoroughbred Sires.

EDITORS PRESS:—I desire to enter a mild protest against your "hoss" editor for republishing that contribution of Mr. De Groat's to the *Hollister Free Lance*. Mr. De Groat is evidently a breeder of thoroughbreds, and as such is entitled to hold them in high esteem and crack them up as much as he pleases, but when in so doing he finds it necessary to run down the trotting-bred stallions, it seems to me about time to call upon him to "hold his horses."

Almost the first words of his article constitute the golden axiom in breeding, "like begets like," but where does he get the next which he quotes, viz.: "The sire must be the superior animal; therefore if you would breed the highest type * * of either the racer, the trotter, or horse for all purposes, recourse must be had to the thoroughbred * * ?" I wonder what my friends in the cattle line would think of me should I proclaim in print "that if they would breed the highest type of either Holsteins, Jerseys or Polled Angus recourse must be had to the Short-horns, and claim infallibility in the verification of my assertion on the grounds that "like begets like!"

Mr. De Groat naively asks "Why will breeders seek this peculiar strain (of Messenger blood) if so desirable, adulterated as it is by the common horse of the country, when it can be found so pure and rich in the thoroughbred?" Now, I have no objection to the gentleman asking himself all sorts of conundrums if it please him and suit the *Free Lance* to publish them, but if he purpose answering them I should advise him to "give himself an easier one." Behold his solution: "Because old Messenger was a racer and a thoroughbred." This is wrong. It was not because old Messenger was a racer! The breeders of 30, 40, or 50 years ago were no greater fools than are the breeders of to-day, and we do not find the breeders of to-day purchasing thoroughbred stallions that have proved their worth at the blood-horse meetings to improve their trotters. If the gentleman himself were undecided which of two horses he should use to cross on his mares for the purpose of raising trotting colts, would he select that one which, in repeated trotting contests, bolted with his driver and raced from wire to wire, or would he prefer the competitor that trotted fairly and squarely around the circuit without hitch or break? Would he deduce from the "racing" proclivities of the first that he must be a better and faster trotter than the second, and be more likely to beget trotters, i. e., to transmit trotting instincts which every evidence tended to prove that he did not possess? If so, why quote the principle that like begets like?

And again I say wrong, Mr. De Groat, to the second assertion contained in the reply to his own question, for old Messenger was not a thoroughbred, as Mr. John H. Wallace has very satisfactorily demonstrated. In other words, Messenger himself was "adulterated by the common horse of (not this) country" (but of England), and hence it does not follow that the "peculiar strain," which breeders of trotters consider "so desirable" in him and his descendants, "is to be found so pure and rich in the thoroughbred." In fact, it might not be found there at all, as the peculiarity and desirability of the strain did not consist in his racing properties, which he doubtless inherited from the thoroughbred portion of his ancestors, but were based on the trotting proclivities of himself and his descendants, and it is more than probable that he inherited these from what Mr. De Groat designates as the "adulterated" or "common-horse" crosses in his breeding. But whether they were or were not is a matter of slight moment at the present day; suffice it that no thoroughbred or quasi-thoroughbred has produced such a strain of trotters as did Messenger, and that the trotters of to-day are vastly superior to those sired by old Messenger himself or by any of his sons or grandsons. Then why go back to the point even where we started to improve? Does Mr. De Groat to-day use a pole and a cross-stick to plow his fields? Does he cut his hay with a scythe? Does he thrash his grain with a flail? These questions seem and are absurd, but are they such in any greater degree than Mr. De Groat's appeal in behalf of the "thoroughbred's" trotting instincts?

We need not go very far from home to refute the claim that even an inbred Messenger must necessarily be the best trotter and producer of trotters. Gov. Stanford has a remarkably inbred Messenger in Gen. Benton. There is not a single "common horse" out-cross in his breeding, and yet where does he stand as a sire of trotters when compared to Electioneer, to Geo. Wilkes, or to dozens of other trotting stallions?

I would not wish to be understood as belittling Messenger, even though he were a thoroughbred. Messenger was undoubtedly the fountain-head of the "trotting gait," and the judicious inbreeding of his immediate descendants caused that gait to become an "instinct" so intensified that the later members of the family have been enabled to transmit it to their descendants in an ever-increasing ratio, until, in some instances, even when the progeny was

from mares which for 20 generations or more was "running bred," the issue has shown extraordinary trotting powers, and has entirely overcome the racing instinct it should have inherited from the dam.

I think I hazard but little in predicting that this reversion to the Messenger strain through Gen. Benton at Palo Alto will ere long be admitted immeasurably more valuable than all the infusions of Planet, Glencoe, Lexington, Don Victor and all other thoroughbred blood, rich, pure, sound, worthy and (as regards racing) proven though it be that has been used at that great breeding establishment.

To "return to our muttons," as our Gallic friends would say, San Benito county must be poorly off indeed if the trotting stallions there are all, or nearly all, "without beauty and finish, with big ugly heads, coarse limbs, curby hocks, upright pasterns, sponge-boned, flat-footed and faint-hearted." There can certainly be no excuse for this state of affairs at this late day, with the innumerable trotting stallions of a higher type bred and for sale at reasonable figures in other parts of this State. If Mr. De Groat counts as a "trotting" stallion every cross roadster "in the country" which is said to be by Bill Jones out of Tom Brown's "Messenger mare" (who died last spring), I will readily admit that his "picture of trotting stallions" may be more or less true, but in fair play, if nothing else, he might have extended it so as to include the "cross-roads" thoroughbred stallion as well. His omission to do so, and his attempt on these "false" premises to usurp for the thoroughbred the uses and purposes of all trotting stallions, are, to say the least, in bad taste.

Not every trotting stallion, it is admitted, can be expected to prove himself the equal of Electioneer, of Guy Wilkes, or of Sultan; but neither is every thoroughbred a Norfolk, a Joe Hooker or a Grimsdale; and the fact of any trotting stallion being inferior to the three first named does not place either or all of the thoroughbreds mentioned superior to him as a begetter of trotters.

To use some of the gentleman's words, "it is highly amusing to one at all familiar with the stock of the country" and the breeding of trotters to read the claims set up by some breeders of thoroughbreds that to breed the highest type of trotters recourse must be had to thoroughbred sires.

W. P.

FORESTRY.

Report of Head Forester for March.

At the last meeting of the State Board of Forestry, H. Rowland Lee, head forester, presented the following report:

Hon. Abbot Kinney, Chairman State Board of Forestry—DEAR SIR: I respectfully submit my third monthly report of the work done and supplies furnished at the Santa Monica Forest Station.

The month ending March 20, 1888, has proved remarkably favorable in the locality for tree-planting and for vegetation generally. The work that has mainly received our attention during the month has been the final preparation of the grounds, the establishment of a water system by hydraulic power and the planting out of a large variety of trees, the young seedlings receiving unremitting attention. We have now received a staff of help which qualifies us for the important duty of transplanting our stock, and whose experience in this respect will render their service and ability more efficient in the future. Seeds which have been sown this season proved highly successful, with one exception (*Catalpa speciosa*), which seed must have been very bad, as the variety is easily grown, and seeds of the same variety procured from another source proved successful.

During the past month we secured a hydraulic ram with piping, which raises water from the creek to a height of 125 feet, a small stream, however, but the same power will fill a 2-inch pipe and discharge at 110 feet elevation. Eventually, when a better water system is established, the whole machinery will continue of service, and in the meantime will cost nothing to keep. The lumber procured was used in building a shed for wagons, tools, etc. The surveyor's map has just been finished, and the bill for the same submitted.

We have planted in the vicinity during the month over 3000 trees for experiment, which comprise those suitable for timber, sea-coast protection and other valuable properties. This number is large, when it is considered that the trees have to be purchased and shipped long distances. In future, when we have our own stock on hand, four times that number will be a moderate calculation and many left for distribution. Answers to queries respecting the planting and cultivation of forest trees have continued during this month as in the past, by mail, notes of which are made in a book kept for that especial purpose.

A donation of forest tree seeds has been thankfully received from R. Douglas & Sons, nursery and seedsmen of Illinois, which will receive due attention. Within the last week a quantity of trees have arrived at the station in a very poor condition for our work, being in all instances improperly labeled, consequently much of their interest will be lost to us until the trees reach maturity, when the trees can be properly named.

Matters at Santa Monica Station are now well under control. In a few weeks we will

require more room for the quantity of trees we have to handle, and from the general aspect of affairs we are fully prepared to commence operations in another field. As evidence of the rapid progress of our work, I may state that what appeared twelve months ago in the shape of blossom is to-day being manipulated as young forest trees, and in the course of another couple of months may be planted in their respective forest positions.

H. ROWLAND LEE, Head Forester.
Santa Monica, Cal., March 20, 1888.

POULTRY YARD.

Chicken-Raising in Southern California.

Whether erroneous or otherwise, it has become an accepted fact that chickens cannot be successfully raised in Southern California. If this is the case, then the climate must be more or less enervating, for nowhere in the colder sections of the States, or even in the South, is the mortality of the feathered tribes brought into question—at least I have never heard so. I have always been interested in chickens, because I believe that, like babies, their care belongs more to women than to men, and because, too, their growth presents an entertaining study; but since I have resided in Los Angeles I have given them more attention than ever before. The result of my investigation is the conviction that chickens can just as well be raised here as anywhere else. To me it seems that the whole trouble originates in palpable indifference, and that the "swell-head," which is affirmed to be climatic, is due to bad accommodations. The days are warm and the nights are cold, therefore through the day the chickens should have shade, and through the night snug shelter. But they have neither; they are simply turned loose to provide comfort for themselves, and to forage as best they may; while cleanliness—which in the care of chickens certainly is next to godliness—is utterly ignored. Chickens in Southern California may not be a bonanza, I do not think they are anywhere; but looking at the matter in a purely common-sense point, there seems to be no good reason why they should not be made to yield a fair profit. To begin with, though, they ought to have good houses, not low, open sheds made of lath, or, worse still, dirty old barrels rolled upon their sides; but substantial houses such as we find on every farm in the East; and these houses should be kept clean and dry, and at night warm. The roosts should be cleaned every day, the nests very often, while lime should be abundantly used every week. Then too, carbolic acid and coal oil should be faithfully resorted to, as preventives of lice, while a little coal oil mixed with soft food ought to be administered once a week as a tonic for the stomach and bowels. Besides, fresh water and plenty of it should always be within reach of the fowl. Much that is written for the direction of the inexperienced in the growth of poultry serves only to confuse the mind and to make the investment an exorbitant loss instead of a moderate gain. But there is no doubt but that a varied diet upon which all such guides insist is desirable. In the absence of worms, too, meat should once a week be provided; and in the case of laying hens milk is a highly productive beverage. But the young chickens are perhaps the most delicate members of the family, and therefore should most carefully be looked after. Like babies, they should be fed regularly, and also should be kept warm and dry. During the day their coops ought to be cleaned and aired; while before the little ones retire to them at evening-tide, they should be closely covered with some weighty fabric which will entirely shut out the heavy dews. In all climates, and with the most skillful handling, chickens will at times become the subject of epidemics. Against such calamities even the most careful cannot provide; but it is my belief that if in Southern California chickens were attended to instead of neglected, the demand would not, as it now is, be greater than the supply. — *Belle Smith Meade, in Los Angeles Times.*

The Coyote.

The author of the following essay on the coyote, which appears in the *Fresno Examiner*, is clearly no admirer of that nocturnal prowler and howler:

The animal is sometimes confounded with the American wolf, but while the latter has no noble elements in him, it would be injustice to the *canis occidentalis* to ally him in kinship with the wolf except through Noah's Great Aggregation of Zoological Wonders and Congress of World-beaters—ten allied shows in one—organized for a memorable rainy season. The coyote, like the late Senator Nesmith's mule, has no pride of ancestry, but, unlike the mule, he has no fears of a paucity of posterity. There is, probably, nothing meaner looking in the animal kingdom than the coyote, and he travels under no false colors, for he is as mean as he looks. Unlike the jack-rabbit, the coyote's depredations are confined to the "witching hour of night," and his favorite point of attack is the hen-roost. How he revels in the bloodshed of the Coshin, the Plymouth Rock and the

dunghill! The younger the poultry the better suited is the coyote. There is no case on record of his ever having attacked a game chicken, for that would involve a certain degree of courage, and of this he is as destitute as he is of fat in his unjuicy body. There is no nutriment in him; and a green fly or a gnat would as soon think of stealing a meal out of a broken-down wagon as getting a mouthful out of the coyote. He is a sneaking, curriish wretch, hiding as best he can in the daytime, after the manner of the Chinese highbinder, many of whose worst characteristics are similar to his own, and generally confining his attacks to moonless and starless nights. He will not drive, or rather he cannot be driven, for one can never get near enough to him for such a purpose, and a coyote drive is, therefore, among the impossibilities. The coyote is a pioneer in this country, claiming a sort of prior residence, and, doubtless, relies on the argonautic plea of immunity from attack through the rifle or strychnine. Fortunately for Fresno county the coyote family is not as numerous as formerly, and when the Logan of the tribe disappears there will be cause for rejoicing.

Keeping a Watch-Goose.

The following dialogue, which we find in the *Oakland Tribune*, may be of interest to poultry-keepers in some places:

"They got a couple of Inghram's pet quail the other night," remarked Captain Thomas, referring to the fact that thieves had stolen two of the dozen quail which Prison-Keeper Inghram recently brought down from the country.

"Have they scooped yours yet?" inquired Special Officer Scoville.

"Not much! Inghram gave me a pair, and they are so tame that I let them run about the kitchen during the day. At night they roost in a cage made by putting wire over the open end of a dry-goods box. But they won't get those quail as long as that goose is on deck."

"So you've got the goose yet, eh?" commented Scoville, sitting back entirely satisfied.

"What's the goose got to do with it?" asked the police reporter.

"A goose!" snorted Scoville. "What's a goose got to do with it? Well, a goose is just the best thing made yet when it comes to watching a chicken roost. There isn't a chicken-thief in this State so fly that a goose won't squawk on him every time. Why, any of these professional chicken-thieves will not go near a roost where they know a goose is kept with the chickens. It is a game they can't beat. The only thing that can get away with a goose is a fox. He'll play dead, and the bird, which has more curiosity than any other thing that walks, will come up to see what's the matter. Then it loses a life in the pursuit of knowledge. But the chicken-thief ain't foxy enough by a long shot. Those quail will be there as long as the goose stays."

THE DAIRY.

Means and Methods on Jersey Farm.

We gave last week a portion of an article written by R. G. Sneath for the April *Overland* on the subject of "Dairying in California." The following paragraphs are selected from the closing portion of Mr. Sneath's article, and we illustrate them with engravings made by the Dewey Engraving Co., showing the arrangement of buildings, etc., on the two portions of Jersey Farm. Mr. Sneath's remarks on the plan and construction of these buildings and his deductions from his experience in feeding and handling dairy cattle will be interesting to all dairymen, whether they furnish milk for city sale or use it in the manufacture of butter or cheese. We quote from Mr. Sneath as follows:

Within a radius of 20 miles from San Francisco are situated numerous dairies that supply the city with fresh milk and cream. Most of these are south of San Francisco, on the peninsula, and in San Mateo county. They supply the better class of trade, which desires good, wholesome country milk, and is willing to pay higher prices than city-made milk sells for. A description of the "Jersey Farm Dairy," the largest and best-appointed dairy in the State without doubt, will serve as an illustration of what can be done.

This dairy was established in 1875 and is situated near San Bruno Station, on the line of the Southern Pacific railroad, some 10 miles south of the city, in San Mateo county. It contains some 3000 acres of rolling land, most of which, having been seeded to rye and orchard grass, produces a large quantity of excellent pasture and supports over 1000 animals.

Between 600 and 600 cows are milked, producing about 1200 gallons of milk daily, the average to the cow being from 2 to 2½ gallons each daily during the year.

There are two main dairy barns, 50x250 feet each, two stories high, and located about 1½ miles apart.

There are four rows of cows the length of the barns, each two rows facing each other, and secured by stanchions. A double line of feed-boxes extends through the length of the barns between them, excepting in the middle of the

barn, where an open space about 30 feet square is left, in which to cool and handle the milk.

The floor is of concrete, shaped to facilitate drainage to traps that lead to sewer pipes under the floor, which carry the liquids out to the fields. The floors are washed clean twice daily with a hose.

The barns are located on elevated ground, so that the liquid manure may be conveyed by gravitation—after being reduced by water—to any portion of the field.

An iron-rail track extends through the center of the barns lengthwise, on which a canvas box-car containing the hay is moved, and a tight wooden box-car for the slop feed. All of this is dealt out by several men as the cars are moved along, the double row of feed-boxes being filled from the center aisle, through the stanchion openings.

The cows are then let in by their respective milkers, each cow taking her usual place and the stanchions closed on them. Over each string of 36 cows is a blackboard with the number of each cow's stall, the horn number of the cow, and the date of her calving, marked with white chalk, and the stall number permanently painted. There being just eight strings of cows, numbered one to eight, it is only necessary to mention, in speaking of a particular cow, the number of her string and stall, by which even a stranger can find her without difficulty. Each cow has her record number branded with small figures in the rear side of her off horn, so that the milker can readily see it when at her side.

One barn record book contains all the numbers of the cows, and every fortnight each cow's milk is weighed and entered opposite her record number, by which means a fair estimate may be made of the quantity of milk given between calving or by the year, and those not giving 3500 pounds between calves are now being marked for beef. This standard can be raised to 4000 pounds by condemning about 100 cows out of say 900 milkers, and this will be done during the next year in the ordinary course, by killing from 75 to 100 head as beef cattle for use on the place. The record will then show the range to be from 4000 to 10,000 pounds of milk per cow for the period between calving. Another record shows the daily operations of the dairy in a line for each day of the month, ruled in columns, to cover the following facts: The day of the month, the number of cows milked, the number of fresh cows taken in, the number of dry cows going out, the number of three-gallon cans of milk in the morning, number at evening, quantity and quality of hay or green feed, quantity and kind of ground feed, condition of pasture, state of weather, number of calves on milk, and any other matter that might have an influence on the quantity or quality of the milk. Numerous experiments have for many years been made with various kinds of feed. Cooking food on a large scale has been thoroughly tried and abandoned, as it produced no more milk than soaking the same in water.

Sugar beets, mangel-wurzels, carrots, potatoes and squash, both cooked and raw, have been tried, but none of them would take the place of good hay and ground feed, or cultivated grain feed, such as corn, barley, wheat, oats, and the grasses. Molasses makes fat, but does not increase the milk.

Cornmeal should be ground fine, and soaked in water from 24 to 36 hours, to obtain the best results. Cornmeal and bran, or middlings, about half and half, have been found to make the most and best milk per pound of food; as compared with wheat, oats, barley, and rye—the food value ranging in the order stated.

Full feeding consists of 20 pounds of hay and 10 pounds of ground feed daily, besides a fair pasture-ground—and as the pasture improves, the dry feed is shortened.

Soiling commences with green barley about the middle of March, and ends with corn in November, taking both crops from the same land. Ensilage of green barley has been tried and abandoned, and this process of preserving green feed is not considered a success in this State. Green cornstalks will make an unpleasant sweet milk when fed largely. Beets and potatoes make milk flat and watery. Alfalfa, turnips and cabbage

UPPER RANCH, JERSEY FARM, SAN BRUNO.

give an unpleasant flavor; squash is too fattening in feeding the large quantity required to keep up the flow of milk.

The farm is divided into numerous fields and pure cold spring water is obtained from the hillsides and conveyed to large troughs in every field by iron pipes. Two reservoirs for catchment water, holding 40,000 000 gallons each, have been constructed at an elevation of 225 and 425 feet above the building on the lower part of the ranch, for motive-power, irrigation and drinking purposes. Several miles of macadamized road and lanes have been built through the farm to keep the stock out of the mud during the winter season, as so many animals in going and returning from pasture twice daily would soon make roads of earth impassable.

The milk cans are washed with revolving brushes by water-power, and the hay is cut and the cream separator run by the same power. The first milk drawn is run through a De Laval separator, and the cream is then ready to be shipped with the milk. Such cream is much sweeter than that raised by setting, and entirely free from any foreign flavor.

About 150 calves from the best cows are raised each year. Thoroughbred Jersey bulls were used for ten years in crossing with common American-grade cows, while the last two years thoroughbred Holstein bulls have been used. The calves have a warm, well-lighted shed, with well-drained, concrete floors for cold, rough weather, and a well-irrigated ryegrass pasture with fresh grown grass the year through.

Calves are not allowed to suck except in spe-

cial cases. When a very choice calf is desired, it will be given to a cow that is sound, but either a moderate milker or one difficult to milk. Calves grow much faster and do better when raised by a cow.

Calves raised on skim-milk alone are generally of little value, even when the milk is fresh and warm from a cream separator. They run to paunch, are feeble, and will not withstand unfavorable food or weather after leaving their milk.

The method of raising calves on Jersey Farm is to give straight milk as it comes from the cow for the first month, half skim-milk the second month, and all skimmed, with hay, grass, and bran after that.

Many calves are lost among the butter dairies by their cows nearly all coming in with the new spring grass. Such calves, after they reach an age to take care of themselves, find the grass dry and parched up, and quite unsuitable for their delicate stomachs. They consequently become enfeebled, and the cold rains of fall and winter carry them off.

By starting calves in December and feeding them on milk and other food until February, they then have a full season on grass to prepare them for the dry grass of fall and early winter, and with this treatment grow strong and hardy.

The ration for a young calf is about two gallons of whole milk daily, or three to four gallons of skim-milk. The value of whole milk at a fresh milk dairy farm cannot be estimated at less than 15 cents per gallon, which is 30 cents daily or nine dollars monthly, and somewhat less when the skim-milk is considered.

In the spring of the year on good grass, cows give an increased quantity of milk, and at the same time there is a lessened demand for milk from the city, by reason of people going to the country for recreation and pleasure. This surplus milk is then used largely in raising calves, which are provided for later on with plenty of green grass by means of irrigation.

For this purpose about five acres of good land is enriched with barnyard fertilizers, plowed deeply, cultivated fairly, and seeded to English ryegrass. Iron pipes have first been laid about the place for the introduction of water. It is then sprinkled daily through large revolving sprinklers similar to those used on lawns. The grass

grows rapidly and it is eaten when fresh and tender, and greatly relished by the calves. Such grass, with a little hay, bran and skim-milk, and a warm shelter at night or in stormy weather, does not fail to raise strong, healthy calves that make excellent cows.

Orchard and rye-grass, being perennial, keep growing most of the year without irrigation, and are, no doubt, the best kind of grasses that can be used in the ranches along the coast.

They have stood the test now for 10 years without reseeding the fields, except on one occasion of a dry winter, when mice and gophers became so numerous as to destroy a large proportion of the grass roots. The pests were destroyed by securing about 250 cats and scattering them about the fields in small colonies, each colony being provided simply with a box-house placed near a spring of water. Afterward seed was scattered over the pasture, and harrowed in. Sometimes when the grass becomes thin or scattered it is allowed to go to seed for a season to thicken the growth.

Alfalfa does remarkably well in stock-raising, but does not answer for fresh-milk purposes in supplying cities, as it imparts an unpleasant flavor to milk and the milk will not keep sweet long.

The milkers receive \$25 to \$30 per month and found, and are generally Swiss. They commence milking at 8 A. M. and 8 P. M., and take 2½ hours to milk 30 cows each. They are mostly strong, healthy young men, and generally do not speak English. They are much more reliable than men of other countries, and do not drink and squander their time or money.

There is a workshop, well fitted with machinery run by water-power, and a blacksmith, tinman and woodworkman make the wagons and milk cans and do all the repairs on the farm. About 75 men are employed altogether, and about the same number of horses and mules. From 1500 to 2000 tons of hay and about the same quantity of mill feed are used annually. A good mill to grind the grain, and ample warehouse room to store it and the hay, are provided.

About 20 wagons are used for the business in the city and on the farm, and wagon-building and repairs constitute a large item of expense.

The horses used—and a great many are used up annually by being driven rapidly over rough stoned streets—come generally from the mountains, and are broken in on the farm at about four years of age to work both single and double. They are almost always perfectly sound and extremely hardy.

They come from good stock and bring from \$70 to \$125 each in the city, not even halter-broken, but when properly handled make kind and useful animals.

The milk and cream is conveyed to the city by large teams and thoroughbred wagons that can carry 200 cans at a load twice daily, going about five miles an hour. Most of it is delivered at a central depot to small delivery wagons belonging to the farm, and the remainder is placed in cool tanks for public sale.

About 1200 families are supplied by the delivery wagons, besides hotels and restaurants. The milk brings a higher price than that from any other dairy, and is much sought after on account of its superior quality.

What cream and milk is left over on a fresh arrival is taken to the butter room and churned by electrical-power in a large square churn. About 21 pounds of milk make a pound of butter, and the butter and buttermilk, being fresh daily, sell at good prices.

Many people visit the depot daily in search of health, as milk is growing rapidly in popular favor as a remedy for many diseases.

HOME RANCH, JERSEY FARM, SAN BRUNO.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Telegraph Legislation.

On the 28th Dr. Green, president of W. U. T. Co., again addressed the Senate committee on Spooner's Interstate Commerce bill. He said he did not appear to oppose a fair and reasonable enactment for the regulation of the telegraph business. If the telegraph were commerce in a constitutional sense, and the Supreme Court had decided that its business is commerce, then there could be no question of the power of Congress to enact a law such as that proposed. Ordinarily his company would desire to be let alone, but under the circumstances it was not averse to such an enactment as proposed, with certain objectionable features stricken out. He was led to this conclusion from the fact that his company owns and operates perhaps seven-eighths of all the telegraphs in the United States, and is therefore an apparent monopoly, while in point of fact it has no exclusive franchises, no legal privileges that anybody else cannot get. But the telegraph had drifted into a combination, not from the grasping efforts of any one man or set of men, but from the necessities of trade. Rates have been cheapened and business greatly improved in its facilities and promptness of service.

He said there were gross popular errors regarding the maintenance of telegraph property. The Government could not send messages for ten cents and make the lines self-supporting. He believed the Western Union property could not be duplicated for its cost.

He said, in answer to a question, that no higher tariff was charged between points on the lines from New York to Omaha than between the terminals. If the second section of the bill gave the Interstate Commerce Commission the right to say what charges were unreasonable, it would amount to a confiscation of the company's lines. He would substitute the word "exorbitant" for "unreasonable." The long and short line clauses should be modified by the insertion of the qualifying words, "under like circumstances."

In Section 5 the bill provides that all parties, excepting news service, should be charged like rates. In that respect it differed from the Interstate Railroad bill, which made a number of exceptions, relating to charities, employees, officers, etc. The Western Union had contracts with 600 railroads, for which free and half-price services were rendered in return for transportation services. The Western Union wanted a provision like that in the railroad bill to cover the railroad contracts. * * *

In conclusion Dr. Green addressed himself to the Anderson bill, requiring the Pacific railroads to maintain and operate their own telegraph lines, and criticised some of its features. The effect of the measure, he said, would be to decrease the revenues of the roads. By such legislation the railroad companies would be the losers, the Government would be the loser and nobody would be benefited.

Col. R. G. Ingersoll, representing the Postal and United Lines, said to the committee: These lines are now substantially under one management. They met the Northern Pacific road at St. Paul, the Union Pacific at Omaha and the Santa Fe at Kansas City. At these points the lines he represented had to stop. The lines over the Pacific railroads were all operated by the Western Union, consequently the only contention was whether the lines of the company which he represented should have equal facilities over roads built by the people under the various Pacific railroad Acts, or whether they must pay tribute to the Western Union from the terminal points he had named. There was still another question, whether his company could even be allowed to put their own lines along these roads. * * * He did not want the Western Union to stand in the bars at Omaha like a contrary steer and say: "We have all these rights. All this right of way belongs to us to use, and these railroads built for the people shall treat us in a certain way. It shall haul our poles and wires and perform other services for us, and if any other company tries to build a line it shall charge an exorbitant price for hauling the material."

The Western Union had a peculiar philanthropy of its own. It did not wish anybody to live if it could help it. It did not suppose that his company could make a contract with the Canadian Pacific or that it could raise the necessary funds to build a line from British Columbia to San Francisco. While the Western Union was in doubt as to the absolute health of competition it sat down to wait until it died, and if it did not die in a reasonable time it proceeded to do what it could to hasten its demise. The monopolies all declared that they are public benefactors; that they would cheapen products. The Standard Oil Company said: "We are a blessing. We give you oil cheaper than you can get it in any other way."

General Swayne said if Colonel Ingersoll wanted to build a line on the Pacific railroads he did not need the help of Congress. There was on the statute-books authority for any individual to compel the Pacific railroad companies by mandamus to do anything which they were required under the statute or common law.

The committee adjourned.

Grange Work and Progress.

[By Mortimer Whitehead, Lecturer National Grange.]

In as few words as possible the Grange is teaching the farmer to "mind his own business," as a producer, as a man and as a citizen. In a single sentence, the Grange means education. It teaches the farmer that he has mind as well as muscle, brains as well as land, and that it pays him to cultivate the one as well as the other, for "Knowledge is power."

It is teaching the farmer not only how to be a better farmer, how to get better returns for his labor, how to grow a crop, but how to sell it. Not only how to earn money, but how to spend it to the best advantage. By organized effort and on business principles he knows the cost of goods and the value of his products; and how to open up the channels of trade so as to reach the best markets. Grange banks, Grange fire and life insurance companies, Grange co-operative stores, creameries and schools organized and run by farmers as a part of their business, have been in successful operation for years. Grain warehouses, grain elevators, freight lines, fruit-growers and other "exchanges," and dozens of other organized business helps, are springing up more and more in all parts of the country. The Grange has and is making the farmer and his family more social.

It Makes Brighter and Happier Homes.

It benefits its members mentally, morally, socially and financially. Temperance is supported; charity is a prominent characteristic. It makes the farmer better to himself, better to his neighbor, better to his country and better to his God. It has by none of its teachings ever made a man or woman worse, but it has made hundreds of thousands better. Its lessons all develop the good, the beautiful, the true. The half has not been told of its good work, and it can and will do more in the future. Every farmer and his family should become members. It will return dollars for every cent that it costs if its advantages are improved.

The Necessity of Continuous Work

And discussion of public questions in the Grange is most forcibly shown in the following extract from a recent editorial in the New York Tribune: "Farmers should come into more frequent contact than now seems to be the custom. We have received many letters in which a remote date in the past is mentioned as that of the last meeting of the Grange, and an equally remote date in the future as that of the next meeting. This may answer certain purposes of the organization, but events move rapidly, and while Congress and many State Legislatures are in session constant watchfulness is necessary." This reminds farmers that the interests of other classes are constantly looked after in State and National legislation, and that organization and watchful care on the part of farmers is an absolute necessity for the protection of their best interests.

The Social Feature

Should receive special attention. Viewing the Grange from this standpoint, it is one of the most progressive of organizations. Within the gate woman is man's equal and eligible to any office. The Matron is seldom greeted with, "I'm going to the Lodge;" but often these words greet her: "This is Grange day; let's hurry and be on time."

Oh! that more of the tired mothers on farms might be greeted thus, and urged to a day of rest; for far from all belong to the Grange.

Brothers, if you only knew how tired, how soul-sick and weary wives are when kept at home week after week, sometimes month after month, housed with the little ones, the manifold and perplexing cares of which would cause you to quote "Old Grumble" most earnestly, surely you would try harder to get your loving, self-sacrificing heart-companions to mingle more in society, and not practice the schoolboy dream of "If I had a little wife I'd put her in a pumpkin shell and let no one come nigh her." It is rather a romantic dream; but the bliss is seldom such as the happy dreamer presumed.

THE MINNESOTA FARMERS' ALLIANCE created an odd political sensation on the 29th ult. The Democratic platform was adopted and President Cleveland was emphatically indorsed. Albert Schepper, a wealthy St. Paul Republican, was unanimously named for Governor. This indorsement possesses especial significance from the fact that it now places Schepper in the field as the candidate of the farmers and ahead of Merriam as the ring candidate. Unless the latter's money can accomplish more than the farmers' influence it places the fight between Schepper and McGill. A curious fact is presented of an organization indorsing the Democratic President, adopting the Democratic platform and placing on

its ticket the Republican candidate. The Alliance issued a ringing address to the people, in which it is asserted that it had in the past presented its grievances to the State authorities and State conventions, only to be rewarded with fair words and broken promises. To remove this state of things it advises the support of Albert Schepper for Governor. The Executive Committee of the Alliance, comprising members of both political parties, adopted resolutions indorsing President Cleveland's views on the tariff issue, denouncing the protective tariff and calling for its immediate repeal on all raw material and necessities of life.

Strangling the Trusts.

A "Trust" bill has been introduced in the New York Legislature that proposes to tax all the mischief out of this class of monopolies in the necessities of life. The experiment is a novel one, but there is no reason to doubt that a policy of taxation could be devised which, if rigorously enforced, would overthrow the system of trust monopolies. The effect of this policy would be not only to protect the public from extortion, but to relieve individual enterprises of a dangerous and remorseless enemy. A good round tax upon every "trust" certificate, while exempting from the tax all persons engaged in like business outside of the "trusts," would be a wholesome and righteous discrimination. It would be crushing a most odious form of despotism. It may be objected that such a policy of taxation would be a State recognition of a form of monopoly that should not be allowed to exist. This is the same kind of objection that radical temperance men use against the high-license system on the liquor traffic. But if we expect to do any good we must take the world as it is, and not sulk like Achilles in his tent because we cannot have everything our own way. It is a great deal better to recognize an evil and endeavor by surgical legislation to extirpate it than to hurl idle anathemas at it. If this hideous shape of monopoly can be taxed out of existence, by all means let it be done. It may save the people of this country from ultimately having to resort to harsher means. That the people of this country, conscious of their power, will long submit to this gigantic mode of public plunder cannot be expected.

Grange Meetings.

As we go to press on Wednesday the Executive Committee are gathering for the semi-annual meeting. We expect a good success of the Deputy Lecturers' meeting on Friday, and will report in our next issue. Business of importance is on hand. The times are auspicious for work in the California Grange field. Let all Patrons come forward with new zeal for the season, and with united hearts and hands we will make a good harvest for the year of 1888.

It is going to be a grand year for this State. We have great public responsibilities, which we must each and every one answer for.

A rousing Grange meeting is anticipated Saturday, April 7th, at San Jose, with several officers of the State Grange present.

Temescal Grange meets the same evening and hopes to have a good sprinkling of distinguished visitors also.

The weather is now likely to be fair, and we hope to receive reports of good meetings from all quarters.

Enterprise Grange.

EDITORS PRESS:—Enterprise Grange had quite an interesting meeting this afternoon. The Third Degree was conferred on a class of three young brothers. Several brothers and sisters occupied the time devoted to Good of the Order with music, recitations, essays and short impromptu speeches. The Worthy Lecturer appoints several members every meeting to be prepared with something for entertainment the following meeting, and in this way the meetings are made interesting. New names are being brought in nearly every session, showing that there is considerable interest taken in the welfare of our Order. Preparations are being made for our annual reunion, which will take place April 20. All Granges are cordially invited to attend.

Fraternaly, ETTA PLUMMER,
Perkins, March 17. Secretary.

FORFEITURE OF LAND GRANTS.—It is reported that the Public Lands Committee of the House has decided to report the bills forfeiting about 40,000,000 acres of Northern and Southern Pacific Railroad land grants and the Ontonagon grant.

BRO. AMOS ADAMS has been confined to his home in San Francisco for some time by sickness.

The Grange is What we Make it.

[Read before Enterprise Grange by Past Master W. A. Birch.]

I have oft heard the expression made, "The Grange is of not much benefit." Now the Grange is just what the members make it. The Order of Patrons of Husbandry has a splendid Constitution and By-laws and a compact, business-like organized basis, the very element of strength and perpetuity. But all of these essentials, while they are the foundation of success, are of no account unless the members take hold in active earnest, and make the meetings interesting and instructive, thus keeping up the interest of the Order; and the more thoroughly this is done the more direct the educational, social and financial benefits of the Grange. Every member of the Grange has an individual responsibility that they should feel and do all that lies in their power to make the organization a success in every way. Let each member select or have an original article to read or recite for the Good of the Order, or any subject that they may choose. Our range is wide. The State Grange has recitations which make a very interesting feature. Our school exhibitions draw a large crowd, which proves that the people like such entertainment. There are subjects that interest us daily, and could they be discussed at the proper time, so that the benefit could be practically applied, so much the better.

In Memory of Joel Russell.

WHEREAS, It is with great sorrow that Merced Grange has learned of the death of Brother Joel Russell of Eden Grange; therefore be it

Resolved, That as individuals and as a Grange we mourn his loss and extend our heartfelt sympathy to his sorrowing family who best knew his kind, generous, loving and true character. As a Granger, we knew him to be one of its staunchest supporters and true counselors, ever a friend of the weak and oppressed and a champion of the weak against the strong; every ready to do battle for the right without regard to the majority and strength opposed, only being satisfied that the cause was just and right; a supporter of the keystone of our republic, the public schools, which is attested by the Russell school-house built upon land donated by him, which is a monument more to his credit than one constructed of granite.

Resolved, That in the death of Bro. Russell the Grange has lost a firm friend, the cause of temperance an active and brave supporter, the country a statesman and true patriot, and the cause of virtue an active supporter. One the sum of whose character, whether a Patron, citizen, patriot, friend, husband or father, was such as all could revere, love and endeavor to imitate.

Resolved, That we express our heartfelt sympathy with the sorrowing wife and family in their great affliction and overshadowing misfortune.

Resolved, That a copy of these resolutions be sent to the bereaved family and to the PATRON and papers of Merced.—L. APPLE-GATE, E. KAHL, H. J. OSTRANDER, Com.

A SWINDLER SENTENCED.—Walter Neustadt was before Judge Toohy in S. E. March 31st, to receive sentence for obtaining money under false pretenses. In November last he entered into a conspiracy with Hamberg and Pilcher to fleece F. M. Parker, an Oregon farmer. So successful was the gang in their devices that before the old man was aware of their true nature he found himself penniless. The particular charge against Neustadt was selling to Parker for the sum of \$750 a half interest in a worthless real estate business, which, according to his representation, was worth \$150 per month. The Judge sentenced Neustadt to one year's imprisonment in the County Jail and a fine of \$2249. If the fine is not paid Neustadt will have to serve one day additional for each dollar, or six years and forty-nine days. This is the extreme penalty of the law, which allows a fine three times the amount secured by the fraud.

OVERTAKEN STOCKMEN.—The Inyo Independent says that the cattlemen of Mono county are moving for a repeal of the ordinance imposing a tax on the business of raising cattle. The cattlemen are taxed on their land and on their cattle. To impose another tax on the business of raising cattle is double taxation, manifestly unjust, and discrimination against that particular business.

FATAL CASE OF GLANDERS.—Constable Morris Ladd of San Jose died of glanders a few days since. He caught the disease from a sick horse which he was treating about three weeks before. He had a slight scratch on one finger, with which a portion of the matter from the horse's nose came in contact.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Palm Valley.

EDITORS PRESS:—Knowing that your paper and your readers are interested in the development of California and its agricultural and horticultural resources, I desire to give a few facts relative to the fruit possibilities of a new valley now being developed in Southern California.

It is a well-known fact that fruit and vegetables which get into the market a few weeks in advance of the regular season always command good prices and are a source of great profit to those who produce them. It is with this idea in view that work was commenced last season to develop the only tropical valley now known in the State of California. I refer to Palm valley, which is located in San Diego county, about 25 miles southeast of the San Geronimo Pass, and about five miles south of the Southern Pacific railroad, on the edge of the Colorado desert. To show the warm character of this valley at this season of the year, I will state that the maximum of the thermometer was 90 degrees, that the minimum was 40 degrees for the month of February; that the average maximum was 78, and the average minimum for the month was 48 degrees. Comparing the temperature of this valley with that of Riverside, we find that the maximum in Riverside during February was 78 and the minimum 33. These figures show that the average temperature of that valley at this season of the year is from 7 to 12 degrees warmer than the temperature of Riverside.

Heretofore this valley has not been developed so as to show just what it will do, but a few grapevines, half cultivated and half taken care of by the Indians last year, ripened grapes fully seven weeks in advance of the earliest sections of the State outside of that valley, while watermelons matured fully that much earlier than those of any other place. This year grapevines of various table varieties are being planted in the valley. They will be taken care of, and we shall soon know just what they will do under favorable conditions. The raising of watermelons is also being gone into on a large scale to test that matter fully.

If the owners of land in Palm valley can have seven weeks of the market for early grapes, early watermelons and other early fruits and vegetables, they can well afford to let the fruit-growers of other sections of the State have the balance of the year, and they will still have the cream of the market and will make fabulous profits on their investments.

A number of San Francisco and Riverside capitalists last fall, appreciating the future of this valley, went to work and purchased 2500 acres of land and bought the stock of the Palm Valley Water Company, a company which owned absolutely about 1000 inches of water and had a stone ditch constructed for eight miles to bring the water from the sources of supply in the White Water river to the lands to be irrigated, and have pushed the work of developing the valley as vigorously as they could during the winter months. The town of Palmdale has been laid off as a central business point for the valley, which will eventually consist of about 8000 acres of land. The Palmdale railroad is now being constructed from Seven Palms to the town of Palmdale, a distance of 6½ miles, and it is expected that this road will be in operation early in April. The Palm Valley Water Co. is extending its ditches to all portions of the valley. The Land Co. is preparing the land for the largest Navel-orange orchard in California, and probably in the world, and it is expected that the trees will nearly all be planted this spring.

The attention of fruit-growers throughout the State has been directed to this valley, and although the company were not ready to push the sale of lands, still the demand for them has been such that a large tract has already been sold at prices commencing at \$150 an acre and advancing to \$175 per acre, and shortly to again be advanced to \$200 per acre.

As a sanitarium and a fine climate for invalids, Palm valley, during the winter season, has no equal on the coast. Being at the foot and on the east side of the San Jacinto mountains, which extend nearly two miles very abruptly above the level of the valley, this place is entirely sheltered from the north winds which sweep over the greater portion of the State periodically during the winter months, and it is only on rare occasions, when a strong wind comes from the northeast, that any wind reaches this valley, except the summer trade-winds, which come in from the southwest, on the south side of the high mountain peak. Every one who visits this valley is charmed with the mild winter climate.

Another great attraction of this valley is the celebrated Agua Caliente Springs, which have been noted throughout Southern California as among the very best mineral springs ever discovered in this State. Hundreds have visited this valley for the express purpose of securing the beneficial effects of these waters, and the testimony of all has been very flattering to their curing qualities.

Just south of this valley is the celebrated Palm canyon, a canyon which, for over four miles in length, is full of fan-palm trees, ranging in height from 50 to 100 feet. As one of the natural wonders of California, this palm grove stands out as one of the most prominent,

and as soon as railroad and hotel facilities make it possible, this canyon will be one of the popular resorts of tourists visiting this coast, and it is safe to predict that in the near future on the completion of the Palmdale railroad, and the erection of a fine tourist hotel, Palm valley will become the popular winter resort of Southern California, as the conformation of the country is such that not only are the north winds kept out, but rainy days are very rare, and fogs are absolutely unknown. The damp, cold weather, which is to be found in so many localities, and so universally at times, over California, is here reduced to the minimum, and the thermometer rarely goes to a point where frost is formed at all. The lowest temperature of the past winter, on an extreme cold day, which was noted for being cold all over the coast, was only 31 degrees, one degree below freezing.

As further evidence that this valley will, in the near future, come to the front as a great winter resort of Southern California, I would state that 1000 acres of land adjoining the Palm Valley Land Co.'s tract has been purchased by the Garden of Eden Co., a corporation controlled by B. B. Barney of Riverside and the Coronado Beach capitalists of San Diego. This 1000 acres lies adjoining the town of Palmdale. It has been subdivided into villa lots. Water will be piped over the entire tract, and a magnificent hotel is to be built for tourist travel. The very fact that these capitalists believe that they have a market for 1000 villa lots of an acre each, for 1000 homes, shows that they have unlimited confidence in the climate of this heretofore unknown valley.

Sapsuckers and Trees Again.

EDITORS PRESS:—Little did I think to call forth such a humorous, amusing and sarcastic rejoinder from your Pajaro correspondent by incidentally referring to the sapsucker. But now really this sapsucker question is serious, as its decision renders the little speckled white and gray bird, sometimes with a little red top-knot, either a friend or relentless foe of the horticulturist. I am for giving him all the benefit of a fair trial, so will give a few unvarnished facts.

I have four old apple trees of one variety whose surface is almost one complete scar from the pit-holes made from year to year. I have a can of old tallow to rub in and fill the holes and thus keep them alive. Now about the poetical sap-tears weeping of your correspondent, they (the tears) of my trees may not be flush and

Like diamond dew so pure and clear
That rivals all but beauty's tear.

But before the late rains, marks of the rich amber juice that trickled down the tree to the ground could be seen.

Now why were the old peach and pear trees on every side left with seldom, if ever, a pit or mark? The only solution or answer I can give is they did not relish the sap as well.

When the bodies of these apple trees were wrapped or smeared with something offensive, the larger branches would be girdled.

I don't know as I understand the anatomical construction of the different varieties of birds and insects, or exactly how they get outside their fluid food; but in my innocence (or ignorance) I had not supposed it necessary for them to have the suction valve and pipe tube even of a common Douglas pump.

Now, Messrs. Editors, you just submit the decision to any intelligent jury if the humming-bird sucks the sweets from out the flowers and you can win that box of apples.

Lower Lake, Cal. C. P. SCRANTON.

The Sapsucker Sets a Trap.

EDITORS PRESS:—I have just been reading Dr. Gally's letter in the last PRESS, in which he refers to the sapsucker and asks: "Who ever saw the little woodpecker pits in a tree's bark weeping?" I have, lots of times, seen small sugar-maple trees girdled by these pits made by the woodpecker and the sapsucker, and the sap oozing out profusely therefrom. But I have also observed that these birds do not make these punctures for the sake of the sap (though I have seen the sapsucker sipping it in the same way every fowl drinks), but for the purpose of attracting bees, flies and insects, so that a meal may be made of them. Where the carrion is, there will be the buzzards gather; and where the sap issues from a tree, as it will where these punctures are made, there will bees, flies and other insects gather to be devoured.

Santa Rita. J. S. TIEBETS.

A HARVESTER SUIT.—A dispatch from Modesto to the *Chronicle*, March 31st, is as follows: For the past week the case of John Fox against the Shippee Harvester Works of Stockton has been on trial before the Superior Court of this county. The case has attracted widespread interest among the farming community, as it is the first case tried out of a large number of similar ones now pending in the court brought by farmers who, in 1884, purchased the Shippee harvester. Suits were brought against the company for damages claimed on the ground that the machines, after a few trials, did not come up to the proficiency promised. This suit was to recover the value of the machine and damages caused by its use in the grain-field. The jury at a late hour last evening rendered a verdict against the company for \$6000. The verdict causes great satisfaction among farmers.

Springtime Promises.

About the middle of March the S. F. *Chronicle* sent out circular letters asking information as to the agricultural condition and prospects of the different quarters of the State, and within a few days past has been publishing the answers of many correspondents scattered all along between Tehama and San Diego. From these reports, filling several columns of the journal aforesaid, we glean as follows:

In Tehama county the acreage of grain is considerably larger than it was in '87; the rainfall has been copious and well distributed, and crops have not promised better for 15 years. Fruit has suffered no injury from frost, and the general outlook is a fine one.

In Butte the wheat is estimated at somewhat over 180,000 acres—a trifle in advance of last year's sowing—while the yield is likely to prove 12 to 20 per cent heavier. Barley also is in excellent condition. Great activity in vine, deciduous and especially citrus planting is noted.

In Colusa the acreage of wheat is about 420,000, and of barley 50,000, and grain has seldom looked better. Some 50,000 vines and twice as many fruit trees have been set out this season.

Sutter being so thoroughly under cultivation already, there is no material increase in the acreage of wheat and barley, but the condition of the crops is very favorable, 20 bushels of the former and 30 of the latter being looked for. Orchards and vineyards have received large additions.

In Yuba, while there has been no falling off in the grain area and the outlook was never more promising, last year's 650 acres of vines and 1200 of fruit trees have been extended to 1500 and 3000—the latter increase being mostly peaches, apricots and Bartlett pears.

Sonoma wheat looks superbly and an average yield of 27 bushels is anticipated, while barley-growers expect 35 bushels. But prune, peach, pear, olive and nut trees are crowding into the old grain-fields by tens of thousands.

In Santa Clara the decreased acreage in cereals and hay, and the increase in vines and trees, is very marked. The outlook for crops of all sorts is of the brightest, and the yield of prunes, and indeed of every fruit except the Moorpark, promises to be very heavy.

In Contra Costa almost all available land is sown or planted, and the prospect is good for a generous yield of both grain and fruits.

From Sacramento and El Dorado orchards, all accounts are encouraging, and what grain there is, is in very good condition.

In San Joaquin the wheat acreage is 260,000 against less than 240,000 in 1887; the crops are doing finely, and 15 bushels is the predicted average. Barley shows first-class and promises 20 bushels. The vast increase in the fruit areas of this county was spoken of in our "Agricultural Notes" of March 24th.

In Stanislaus the grain is said to stand quite as well as it did in 1882—the most prosperous grain year ever known in San Joaquin valley. Merced wheat-growers look for an average to full crop, say 12 bushels for the whole county, while rye and barley are expected to give at least 25 bushels. But "this year will probably witness the last full grain crop in Merced county, for many fine grain farms are being cut up into small lots for fruit culture."

Tulare has, by close calculation, 600,000 acres sown to wheat this year, and the probable yield is placed at 8,400,000 bushels, while the corresponding figures for barley are 50,000 and 800,000. Great activity has prevailed in vine and tree planting, and the season has been propitious to all fruits except apricots and late peaches, upon which in blossom came a heavy frost.

San Luis Obispo has 110,000 acres or more planted in wheat, against 83,000 reported by the assessor last year, and the present condition is thought to warrant a hope of 20 to 25 bushels. East of the mountains the grain appears perfect, but on the coast side there are some signs of the wire-worm. About 42,000 acres of barley were sown, but the yield is not likely to exceed 200,000 centals. Here, as in so many other districts, vast additions have been made to vineyard and orchard.

In San Bernardino but little wheat is raised, but something like 200,000 acres is in barley. This crop at present is in most promising condition. Fully half of it will probably be cut for hay, and the rest is likely to run 35 bushels. Raisin grapes, deciduous fruits and oranges are extending their acreage, and the situation appears highly gratifying.

San Diego joins the chorus of cheerful voices with assurance of magnificent crops of cereals on largely augmented acreage—28 or 30 bushels of wheat and 35 of barley being talked of, and myriads of newly-planted fruit trees, citrus and deciduous.

Reports from other counties are of the same general tenor, and with the seasonable and welcome showers of the past week, every one save the incurable grumbler is hopeful and happy at the outlook.

SILKWORM EGGS.—The State Board of Silk Culture received from Italy, last week, 720,000 silkworm eggs in fine order, and are now distributing them. Another lot is soon to arrive, and the board will begin propagating the worms at their new quarters in the Flood building.

PINKYE.—This disease is reported as more or less prevalent in the city stables at present.

News in Brief.

ABOUT 200 new buildings are going up in Jose, and many substantial improvements are being made.

THE salmon season opened on the Columbia river on the 1st, though few fish have so far been caught.

THE surveys on the proposed Nicaragua canal are about completed, and the prospect is that the old Menocal route will be adopted.

THE large granary on Eppinger & Co.'s ranch, near Germantown, Colusa county, was destroyed by fire on the 29th ult. The loss is \$3000.

THE plans for the Lick Free Baths in this city are to be completed this month. The sum of \$150,000 was left by the late James Lick for these baths.

SENATOR STANFORD has presented to the Senate the petition of the citizens of Placer county asking for the preservation of the forests of the Pacific Coast.

OFFICERS have brought 150 of the convicts from the Folsom State prison to that at San Quentin, where they are to be put at work in the jute-mill making grain sacks.

THE report of the secretary of the North Pacific Coast Railway Co. shows that during 1887 the road sustained a loss of \$23,864, owing to the heavy expenditures for repairs.

THE public debt was decreased \$11,198,625 in March. The total cash in the United States treasury is \$586,454,000. The public debt less cash in the treasury is now \$1,202,454,714.

THE death of one of the newly-imported negroes at Fresno from pneumonia, the disease being caught on the route, has had a bad effect on the darkies, who are beginning to grow homesick.

THE Public Lands Committee of the House has decided to report bills forfeiting about 40,000,000 acres of the Northern and Southern Pacific railroad land grants and the Ontonagon grant.

A PATENT has been applied for by a Gilroy man for a process of manufacturing illuminating gas from the bitumen of which there is an inexhaustible supply on Sargent's station, on the Southern Pacific.

THE Oakland city wharf is to be shortened, a shipway dredged between it and the channel of the harbor and additional piers constructed. It is presumed that the work will cost between \$30,000 and \$40,000.

ON Monday of last week an excursion party went from Sacramento to Placerville to celebrate the opening of the railroad line to the latter city. The opening of this road is of the utmost importance to El Dorado county.

DURING the month of March 4000 Eastern tourists returned home by the way of Ogden over the Central Pacific, Union Pacific, Denver & Rio Grande and the Burlington. The number going East this week will be equally as large.

CLAUS SPRECKELS has decided to build a sugar refinery in Philadelphia with a capacity of 2,000,000 pounds daily. The cost of the plant will be \$3,000,000, and the annual output will be \$36,000,000. The capital to be invested, \$5,000,000, will all be supplied by Spreckels.

THE impressment into the French army of John Franchier, a naturalized citizen of the United States, will probably be the means of the United States and French Governments reaching a correct understanding of the rights of a naturalized citizen when revisiting his native country.

POSTMASTER-GENERAL DICKINSON, in his estimate, finds it necessary to increase the item for the hire of clerks in postoffices \$6,000,000. The estimate for rent, light and fuel for postoffices is increased to \$575,000. The estimate for the free-delivery service is increased to a total of \$6,000,000.

THE State Board of Trade has received from the Placer County Board of Trade the money necessary to arrange for an excursion to New-castle, to be held under the auspices of the latter organization on the 17th instant. A banquet and free carriages will be offered the excursionists who visit the home of the orange.

AN issue of \$500,000 bonds in San Jose is said to be invalid, owing to an error in the advertising. For the present the improvements which were going on have been stopped until the matter is investigated. The notification comes from Adolph Sutro, who purchased all the lands and had already paid \$202,500 of the money.

A BED of coal has been found on land belonging to the Pacific Improvement Company at Slack's canyon, near the boundary line between San Luis Obispo and Monterey counties. The coal is similar to Seattle. Several hundred tons have been taken out already for the railroad company, but the exact value of the mine is not yet known.

THE Merced *Express* denounces as untrue the statement telegraphed from Fresno that 1000 jack-rabbits were saved alive from a recent rabbit round-up there to be sent to Merced and used in coursing matches. The *Express* adds: There are no coursing matches at Merced. We have more than enough jack-rabbits for all sporting purposes. In fact, Merced is an exporter of jack-rabbits.

THE Central Pacific Railroad Co., in the U. S. District Court, asks an injunction be issued to prevent the heirs of those 30 persons killed by the Julia disaster from bringing suits for damages until the hull of the Julia is sold. The company contends that damages must be confined to amounts within the value of the remains of the steamer, and asks that the hull be sold to ascertain said value.

What Makes a Man.

Not numerous years, nor lengthened life,
Not pretty children and a wife;
Not pins, and chains, and fancy rings,
Not any such like trumpery things;
Not pipes, cigars, not bottled wine;
Nor liberty with kings to dine;
Nor coat, nor boot, nor yet a hat,
A dandy vest or trim cravat;
Nor master, reverend sir, nor squire,
With titles that the memory tire;
Nor ancestry traced back to Will
Who went from Normandy to kill;
Nor judge's robe, nor mayor's mace,
Nor crown that deck the royal race;
These, all united, never can
Enlarge the soul to make the man.

A truthful soul, a loving mind,
Full of affection for its kind;
A helper of the human race,
A soul of beauty and of grace.
A spirit firm, erect and free,
That never basely bends the knee;
That will not bear a leather's weight
Of slavery's chain for small or great;
That firmly speaks of God within,
And never makes a league with sin;
That snaps the fetters despots make,
And loves the truth for its own sake;
That worships God, and only God,
That trembles at no tyrant's nod—
And thus can smile in curse and ban—
That is the soul that makes the man.

—Exchange.

Mr. Mouser's Sawbuck.

Mr. Mouser and his merry little wife occupied a charming cottage in the suburbs of a large city in the "Fatherland." His business connections were of such a nature that he was usually at leisure after four o'clock in the afternoon.

Mr. Mouser prided himself on being a man of originality and brains. Mr. Mouser also liked a little joke—at other people's expense.

It was autumn. Mr. Mouser had just laid in a goodly supply of winter fuel. Wood was chiefly used for this purpose in the land of Mr. Mouser's birth.

Sitting by the window of his cosy living-room, enjoying a royal smoke from the long-stemmed porcelain pipe, Mr. Mouser watched the wood-sawyer plying his trade, made easy by long habit of handling wood and saw. As Mr. Mouser gazed and pondered, an idea crept into his head. It was grasped—as ideas quickly became captive there.

"Lizbeth," said he to his wife, "it is singular I never thought of it before—I generally think of such things—but it strikes me that I could saw that wood myself."

"Gracious! what an idea!"

"A bright one, isn't it? A big saving, too! Just see with what ease it is done—the man cuts through the sticks as if he were slicing bread and butter; besides, I require more exercise; my health is not what it has been."

"My dear, do you feel ill?"

"N-no, but a man needs to exert himself if he does not wish to run down in muscular power. My habits are too confining; a sense of this fact has been growing on me lately. But I have solved the mystery while watching that man play on his saw-jack."

A merry twinkle of the eyes and a laudable endeavor to maintain a serious expression would have convinced the beholder that Lizbeth also had ideas, but like a properly respectful wife she kept them to herself until called for.

"Do you think, Lizbeth, that a little gentle muscular activity is what I need to stimulate appetite?"

"You might paint the house, or do some less tiresome work than wood-sawing," replied Mrs. Mouser.

"Oh, you underestimate my capacities, my dear. And sawing wood is not such hard work. Come and see how simply it is done, yet how every muscle is brought into play. I am enchanted with my idea, and shall carry it out. The man can finish this job, but it shall be the last I ever pay for. What think you of it, wife?"

"Well," laughed the lady demurely, "I think we shall be obliged to live on cold victuals and wear blankets to keep from freezing. But seriously, dear, you had better consider what hard labor you are planning for yourself. If I were you I would experiment on a few cordsticks and assure myself that it is as easy as it looks."

"That's just like a woman!" retorted Mouser, disdainfully; "she never does anything heroically; she is totally incompetent in matters of physical calculation. Now, I can see just as well as if I had stood over that man's saw-jack for an hour, the amount of force required to drive a saw through a stick of cordwood. And I declare to you here and now that I am going

to do the next load myself. It is play; nothing but play!"

Lizbeth laughed so tantalizingly that Mr. Mouser turned upon her in a flurry of indignation, saying:

"You seem to have your doubts, madam!"

"Seeing is believing, sir!"

"Well, you shall see. You ought to know by this time that I am a man with a mind of my own, and when I say I am going to do a thing I do it. Please bear this in your shallow mentality, Mrs. Mouser, that I, your husband, am determined to never more pay one dollar for a wood-sawyer's hire."

"I am afraid I shall have to do a little of the wood-sawing myself, then," gravely murmured Mrs. Mouser.

Mr. Mouser meant business. He at once ordered the very best kind of a new saw-jack made. He purchased a splendid saw, with sharp teeth and a light frame. He pranced about, happy as a schoolboy, with dabs of yellow and green paint spattered all over his person, until finally the saw frame suited him in its bright yellow coat. The saw-jack he painted a lovely light green.

Daily he promenaded impatiently around the sheds where the wood was stored, and grumbled because the fuel lasted so unusually long. At intervals he added another coat of green paint to the highly decorated sawing-jack ("sawbuck" it is called sometimes), and bade all his acquaintances and friends come and inspect his patent calisthenic toys, until every one for miles around became familiar with Mr. Mouser's green sawing-jack.

At last the longed-for day arrived. A big load of fine hickory had been piled up in close proximity to the tools of decimation.

Mr. Mouser was all excitement. He passed by his amused wife with important disdain and scarcely gave himself time to devour his dinner, he was so eager to be at work.

"Nothing more, thanks," he replied, as his wife wished to replenish his cup. Rising, he hastened to handle his pots with an ardor that caused Lizbeth to smile knowingly as she watched him pick out the very smallest and most slender cordsticks.

This was a great mistake on Mr. Mouser's part. He should have tackled the difficult ones first, on the simple but fruitful theory that custom would have sweetened his toil with the balm of greater ease.

My! how the saw rent and the abbreviated sticks tumbled to the ground! Still Lizbeth, who was peeping with laughter-brimming eyes, noticed that at the third cordstick work seemed to slacken just a little, but seven were finished and Mr. Mouser came in, declaring he felt glorious.

The second day Mr. Mouser remained at table a trifle longer. Four cordsticks in broken lengths licked the dust, however.

Third day—Mr. Mouser took time to glance over the daily news after dinner. Record: Three cordsticks.

"Lizbeth," said he, "I think I've been cheated in the saw jack. It is not put together on as practical a plan as I was led to believe. It wriggles."

Fourth day—Mr. Mouser toyed over his dinner extensively. He smoked his pipe and read the paper. He glanced over his monthly magazine until dark, and then started up, exclaiming:

"Mercy! how short the days are!"

Mrs. Mouser enjoyed the situation intensely, but said never a word.

Fifth day—Mr. Mouser rose with a sense of injustice resting upon him. All day he was haunted by the outrageous fate that made him the owner of a sawing-jack.

"My dear, we require more wood than usual to-day and to-morrow, washing and ironing days, you know," said Mrs. Mouser as soon as he got home.

"I never saw anything like the way you women manage to consume fuel!" and Mr. Mouser grabbed his hat and strode angrily toward the woodpile. A few sticks fell before the savage manipulation of the saw, while Mr. Mouser's snarling kept excellent time to the wild motions of that sawyer.

With a crash he sent the saw flying over the woodpile. This was too much. His wife was a brute to expect him to work like a slave during the few moments he could call his own free from business drudgery. But if he gave up he would never hear the last of it. Oh, if he could only get rid of the saw-jack.

A long time he pondered; at last a smile of joy illuminated his face. That night, after his wife had retired, Mr. Mouser slipped out and carried that hated green object to the front gate. Presto, in the morning the *corpus delicti* would be gone. The highway was full of robbers, who would steal anything and everything.

He would make a big fuss about the loss, but take good care not to buy a second saw-jack.

He slept the sleep of the just until about 4 o'clock in the morning. It was still dark, but his anxiety to assure himself of the loss of his trouble caused him to sneak out and reconnoiter. The saw-jack was still there. Mr. Mouser whispered—not a prayer. "Oh, well, there is time enough still between this hour and daylight for a theft to be committed," he muttered. It was the voice of Mrs. Mouser that awakened him in time for breakfast. He glanced out of the window the first thing. Oh, how brightly the sun shone, and that saw-jack gleamed up at him in all its verdant beauty. No robber hand had carried it away. A fearful sigh escaped the Mouser bosom.

"You must saw some wood for me before you go, dear," said his wife.

"What, more wood!"

"Yes, dear; recollect you only sawed one stick last evening," rejoined Mrs. Mouser, meekly, but a wicked gleam of mischief played about her eyes and mouth.

Mr. Mouser ignored her reply, and hastened to town with his pretty tools with a vigor born of awful fury, but way down in his soul a voice groaned, that sawing-jack must go!

Where? whence? how?

Mr. Mouser was a man of resources. Twelve o'clock, midnight. A burglarish darkness and silence brooded around as a man stole hence from his couch, and, grabbing his trousers, left a cosy bedroom. A little later the only other active creature about, a feline prima donna, might have witnessed a sorry sight—a solitary man marching toward, clutching in his strong right hand a beautifully painted green sawing jack.

Soon he returned. The sawing-jack, where was it?

Mr. Mouser rose that morning in a most delightful frame of mind.

"Lizbeth, my dear little Lizbeth," he exclaimed, friskily, "I am going to work in earnest to-day. I am feeling fine, much better than I have for some time. Here, feel this arm. How's that for muscle, eh? That's what sawing wood has done!"

Lizbeth blinked oddly, but looked contented. Mr. Mouser hastened out to "flip off a stick or two before breakfast," but soon came in looking quite angry and puzzled.

"What in the world has become of that jack?"

It was gone. "Such infamy—to steal one's very implements of toil!" he cried, in a rage, as he sent for the old wood-sawyer again.

Mr. Mouser, of course, grieved over his loss, but managed to conquer the regret sufficiently to display some of his old wit and mirth.

But this good feeling received a sudden check the morning after the burglary of the jack.

He had just opened the daily paper when his glance was arrested by a leading paragraph.

"Lizbeth, look at this!"

Mrs. Mouser became alarmed. Her husband was pale as death and trembling in every limb as he handed her the paper. She read:

"The residence of the Hon. Oliver was broken into night before last and a large sum of money and valuable plate and jewelry stolen."

"The robbers entered by the garden window, from which they had removed the iron grating, while standing on a singular-looking wooden object, recognized by old-fashioned country folks as a 'sawbuck.' It is painted a light green, and will doubtless prove a valuable clue toward tracing the miscreants. A thousand dollars reward is offered for return of jewelry or information leading to the arrest of the robbers."

"Why, this is splendid! You can at once notify the authorities that the 'jack' is yours—the thieves who carried it off!"

"Oh, my—oh, my!" groaned Mr. Mouser; "don't talk to me about thieves. I may be arrested any moment when they discover—"

"Discover what? How can they arrest an innocent man because he owns an article stolen from him and used by wretches—"

"Oh, Lizbeth, I may not even be able to prove an alibi. Oh, what shall I do! I tell you, wife, I am not entirely innocent."

"Ah! we nab you confessing, my fine bird," a rude voice here interrupted, followed by the entrance of the minions of justice.

Mrs. Mouser begged, cried, stormed and implored. Mr. Mouser was mute and totally crushed, but the bold minions of authority led him away to a dungeon, where he languished for three days before his friends could obtain a hearing for him. In the meantime the real culprits had been caught, but the law required an explanation of the language that appeared to the police like a confession of complicity, notwithstanding Mr. Mouser's unquestionable social standing and perfect respectability.

The court-room was crowded with his friends and neighbors. His wife gazed at him tearfully and lovingly, but Mr. Mouser was very much cast down. There was no escape. He had to tell how distasteful wood-sawing had proved to him, how he feared the ridicule of wife and friends if after all the boasting he gave it up. But when he related his midnight elopement with his green sawing-jack, even the court joined in the broad smile that ripened into a roar of laughter from the less dignified listeners. The crowning humiliation came, however, when he left the prison for the coach to be taken home. There he saw the green abomination resting at the driver's feet on the front of the carriage. His wife has not stopped laughing yet at his midnight adventure.—Adapted from the German by Mrs. Miles H. McNamara.

An old lady subscriber wrote the editor a letter of reproof and stopped her paper, because he had neglected to denounce in its columns the skating rink which had just been revived in that town. The same day the proprietor of the rink came in and ordered his paper stopped, because the editor neglected to give the rink the usual local mention due such enterprise. This kind of business is of almost daily occurrence, and the case above cited will serve to give the public an idea of what causes the editor to live in perfect peace and happiness, always looking smiling and continue his efforts in behalf of suffering humanity.—Exchange.

The Frost Plant, or Frost Flower.

EDITORS PRESS:—Many have no doubt read glowing and poetical accounts of the beautiful and wonderful frost flower of Siberia and Northern Europe. These have perhaps been considered pure fiction by nearly all readers. These accounts say that late in the fall, after the first snows have fallen, this plant springs into growth and pushes itself up through and above the snow for a foot or two in one night, branched in many beautiful and fantastic ways, each branch ending in beautiful snow-white flowers of many varied forms, which by midday have ripened and decayed, the whole plant and flowers being as white as the driven snow, the stem built up of the most delicate tracery. This seems like fiction, and is unreasonable, yet this, like nearly all other myths, has a foundation of apparent fact. And here is the explanation.

The writer was spending a winter in Lower Arkansas with dog and gun. In December a norther came with three or four inches of snow. The weather immediately preceding had been warm, sunny-growing weather. The fall rains had started many hardy plants in the warm valleys into rapid succulent growth. The soil was warm. The snow covered the ground before the cold of the norther or blizzard had time to freeze it.

We were out next morning early, hunting after any of our deer that might have strayed or been stolen. We had not gone far when a fine young buck stopped and lay down at the command of our Winchester. He was butchered and hung up out of the reach of the many wild hogs, and the hunt went on. About 9 o'clock, descending a steep bank, we found at its foot a narrow valley which had been in corn which had been cut and carted away for feed. Coarse succulent weeds had sprung up thickly all over it. These had recently nearly every one been broken down to the ground by cattle feeding on the grass growing among them. The snow came suddenly and covered them over. The soil was warm and their roots were busily at work pumping up water for the use of the plants; but the plants being broken off instead, they pumped it into the cold snow, where it was at once frozen into gossamer threads of the whitest frost. The few inches of snow guided and supported these frost threads directly upward, and held them in bundles until they grew from 6 to 20 inches above the snow. Just as we reached this valley, about 9 o'clock, the sun shone out brilliantly and gave us one of the most beautiful sights the eyes of man ever looked upon. At the first glance it looked simply like a great number of different plants thickly covered with pure, white, sparkling hoarfrost. But the white was too pure for such, besides, the shapes were too fantastic, curious and beautiful. They stood up in nearly every beautiful and intricate form from 2 to 20 inches above the snow. The most common form curved over in the finest feathery snow-white spray, like an ostrich plume. But there was every shape imaginable, and the stems were of every shape except round. One who has seen winter's tracery of frost on windows can have an idea of these beautiful and varied forms.

After feasting our eyes with this most brilliant sight, the next thing was to seek an explanation of the phenomenon. As before said, the weeds—nearly all of one species—were broken off at the surface of the ground by the hoofs of cattle, and the roots being still at work in the warm snow-covered soil pumping up crude sap (which is water), on reaching the cold snow it was frozen, the pressure and supply below continuing, and the air in this completely sheltered little valley being motionless, these delicate frost forms were pushed up through the snow into the air; so delicate were they that the least motion of the air would have prostrated them. While we were examining, the warm sun caused the frost flowers on the north half of the valley to disappear; soon all were gone. During the day the snow all disappeared from the valley. Crossing it again the next morning, which was again quite frosty, we found the same phenomena in that and in several other warm valleys, except that there being no inches of light snow to guide the frost plants upward, they had curved and rolled themselves up in bunches of pure foam-like frost.

Such is an explanation of the "frost flower" or "frost plant," perhaps rarely seen so far south as was these examples. On telling this true tale to a resident of Upper Michigan, he said: "I have often seen examples of these strange forms of growth up through the snow in early autumn in my region, in warm, moist, rich soils in sheltered places. They looked so uncanny to me that I did not search for an explanation. The Chippewa Indians have great dread of and will not go near them. With us the ground seldom freezes before the snow comes, and it soon covers it so deeply that it does not freeze at all." The same is true, we suppose, in North Europe, and in both places, therefore, strong, vigorous "frost plants" would be sometimes found. One tourist in Siberia—we suppose a tenderfoot—tried to obtain seed of the beautiful thing to take home for planting.

GRIST-MILLS are said to have been an Irish invention and were first run in Ireland in 214.

To Be Remembered.

There's a year to be remembered
When your eyes first looked in mine,
And I felt my heart outreaching
Like the tendrils of a vine.
Then the world grew full of sunshine,
And the heaven above seemed near;
And I hoped with words unspoken—
Need I tell you, love, the year?

There's a day to be remembered
When your lips were pressed to mine,
And I felt my pulses beating
To a measure quite divine;
It was bliss to lean upon you
Like a child who, tired with play,
Nestles closely to its mother—
Need I tell you, love, the day?

There's an hour to be remembered
When your soul was pledged to mine,
And a perfect satisfaction
Seemed my being to enshrine.
Love was life, and life was loving;
Rich was autumn leaf and flower;
Two as one, henceforth, forever—
Need I tell you, love, the hour?

—Sarah K. Bolton.

Circling Letters—A Pleasant Usage.

Some 25 years ago there lived a happy family in the State of Maine. There were five sisters in the family. After awhile they all married—as all happy sisters should—and separated from each other as all happy sisters have to do when they marry. After years of separation it was remarked that communication between them was very irregular, and it was impossible to tell how the different members of the family were prospering. One of them at last wrote another a letter and requested her to send it with one from herself to a third sister, with a request to do likewise with another sister, till the circle was made complete. The custom has been kept up ever since. When the package arrives it contains a letter from all the sisters. The children of the sisters have inaugurated the same custom and when one of them gets a package, it contains 15 or 20 letters, so all the cousins talk at once. It is a very pleasing custom, and should be adopted by other families who are separated. One of the sisters mentioned resides in this city, and from her we received the basis of this article.—*Nevada City Herald*.

NEVADA'S WALTZING GIANTS.—“Out in Nevada,” said a mining man from White Pine, “we have the sublimest dance that any man ever saw. We call it ‘the dance of the giants.’ Great cylinders of sand, from 8 to 20 feet in diameter, and sometimes immensely tall, come careering across the desert with a whirling, waltzing motion that is very graceful. I have often seen them when they must have been two or three miles high, for their tops reached into the clouds. But oftener there will be one big column, with a lot of little columns attending it, all waltzing together. The effect is the strangest thing imaginable. It is both sublime and grotesque. It inspires you with awe, and at the same time fills you with the desire to laugh at the odd performance. And if the man is superstitious, the weird, fantastic sight can make him feel mighty uncomfortable. They are never seen except in the summer-time, and are most frequent in July. They have their beginning in some incipient whirlwind, which snatches up a handful of sand while the surrounding air is still, and then they keep on growing and moving onward. They are not like the cyclones farther east, for they move with very little noise, and, instead of being funnel-shaped, are of the same size from top to bottom. The motion is the same, being both circular and advancing. They draw up into the cylinder fabulous quantities of sand, tons of sagebrush and sometimes good-sized stones. How far they travel nobody can tell. They must travel the whole distance of the White Pine valley, 350 miles, and sometimes they come down through Spring valley from Idaho to the Peranegat valley.”—*Chicago Inter-Ocean*.

CIGARETTE PHOTOGRAPHS.—Connected with the sale and purchase of deadly cigarettes of certain brands are the highly objectionable photographs of half-nude women, not a few of whom are nothing more nor less than cyprians. This subject has been referred to in this paper before, but not in the manner we shall speak of it now. Do parents of Calistoga and vicinity know that there are schoolgirls from 8 to 15 years of age who are particularly fond of the photographs mentioned, and in some instances are making collections of them? That some of these collections embrace from 80 to double that number of the objectionable pictures? We do not wish to be understood that the Misses attending school all seek the photographs, but we are well informed that too many of them do. The pictures are often secured of boys, who are frequently requested to buy with their cigarettes certain ones of these objectionable cards. Parents who have examined a collection of these small photographs well understand that their girls ought not, by any means, to be permitted to handle them, and that the boys should not be given greater privilege in the matter. But it is impossible to ascertain just what the boys are doing, and this is true of those particularly who have so far passed from under parental control as to smoke cigarettes.—*Calistogan*.

YOUNG FOLKS' COLUMN.

Happy Jim.

A California Story.

(Written for the RURAL PRESS.)

“What's your name, my little man?” asked Mr. Kellogg as he confronted a little five-years-old boy standing in front of the store he had paused to enter.

“Happy Jim!” was the answer, given in a rather bored tone, as if the youngster was tired of telling his name.

“Happy Jim!” said the gentleman, looking down at him; “Jim what?”

“Jess Jim—Happy Jim!” said the child, impatiently walking away. He passed on down the street, a little fellow still in kilts, hatless and yet showing that care had been taken in dressing him in the morning, then still in its early freshness. Although the dew was not long off the grass, his gingham blouse was badly soiled, his hands and face both dirty, and his light curly hair full of bits of hay. The men in front of a saloon called out: “Halloo, Happy Jim, come in and have a drink.”

The child looked up and down the street as if in search of some one, and then went in.

“Hain't seen my guv'nor this mornin', have you?” asked the little fellow.

“No,” said the barkeeper, “he hasn't passed here. Does he carry his stick yet, young man?”

“Name's Happy Jim,” said the youngster, scowling. “Course he carries it, the old —;” and here followed an oath most fearful to hear from the lips of the baby who stood there with his feet far apart, waiting for the lemonade, with a generous dash of whisky in it, the barkeeper was mixing for him.

“Come, Happy Jim,” said one of the more quiet-looking men in the crowd, when the shout of laughter had subsided, “you oughtn't to call the old man such names.”

“Calls me 'em his self, 'n thrashes me for saying 'em,” retorted the child, smacking his lips as he put down the glass.

“That's so,” said one; “he taught the child to swear when he couldn't walk yet, and now it ain't so funny. He can't keep the young one off the street, and they never know where he is.”

“Where's his mother?” asked a bystander.

“Poor woman, she has no time to see to him after she dresses him in the morning. Jim Bourne did well enough till he left the ranch and came up here to keep the Western. His old woman has no time now for anything but the work of the hotel. Bourne's running behind, too. They can't keep many to help her.”

Just then the shadow of a man fell across the floor and the boy's father called out “James!”

The child started, but walked right out to him. The man held up a stick and said: “See this, my boy? You march home. Your mother wants you.” Happy Jim walked away, and the man entered the saloon.

“Toss me up a cocktail, Mike,” he said, “I've got to get back and take that little cuss to school. His mother is worrying her heart out over the way he's growing up, and she says he must go to the kindergarten. There he'll be safe, and she'll know where he is.”

A little later, Happy Jim, all sweet and clean, entered the schoolroom with his father. The heart of the little teacher sank, for although she had agreed to take him, she dreaded his influence on the little ones, who were from the best families in the town.

“What's your name, my little man?” she asked, taking his hand in one of her own cool, firm ones.

“Happy Jim,” said the child laconically.

Repressing a smile, she asked, “How old are you?”

“Sixty-five,” he answered, looking about the room. It seemed best to ask no more questions then, so she gave him a place among the little ones, and he was soon interested in the pleasant work so new to him. Miss Nannie paid little attention to him, wishing him to get used to the new surroundings before she undertook the task of conquering the little man. That afternoon one of his many friends (?) among the men met him on the street and said:

“Ah there, Jim! you dirty little rascal, why ain't you at school?”

“Did go this mornin',” said the boy. “Too busy this afternoon. Ain't got time.”

“Wait till the old man gets you,” said the man.

“Hoh! he's gone in the country; won't see anything of him for awhile.”

“What'll you do if he asks you?” questioned a man who had stopped to hear the child's quick answers.

“Tell, o' course,” said Happy Jim. “It's no good to lie.”

There was the making of a fine man in the boy, but he would never be one. He was quite a character of the town, and every one seemed to conspire to spoil him. The next morning Mr. Bourne took him to school again.

“Here, Miss Nannie,” said he, “I've whipped him for not coming yesterday, and I wish you would do the same now and whenever he is absent without bringing a note from us when he comes back.”

The child looked at her curiously with something of defiance in his face.

“No,” she said; “Mr. Bourne, I never whip the children. I think Jim and I will be good friends soon.” As it was quite early yet, and none of the rest had come, she had a quiet talk with him, and she saw the sweet, wholesome nature hidden under the crust of his sadly-perverted disposition.

He went regularly to school after that, and though no one noticed much difference, he had less time to be on the street, and the teacher knew she was slowly winning him.

One morning he said to his mother, while she was getting him ready for school:

“I like Miss Nannie; she's a bully girl. She says if I'll be a good boy she'll like me better. Would you, ma?”

The tears filled her eyes, but she only kissed him and said:

“Yes, Jim.”

Slowly rubbing off the kiss, he went on:

“I asked her the other day if she'd marry me, 'n she said if I'd try to grow up a good man she would if I wanted her then. Say, ma, why don't you ever tell me 'bout God? Miss Nannie she says He don't like to hear me swear, so I ain't never goin' to no more. There now,” he cried, squirming away, “my hair looks good enough, 'n you needn't kiss me every mornin', either; men don't care for such things.”

“True enough,” thought the poor little overworked woman, “they don't. It's no wonder the child notices it. He has been so much among the men that he is five years older now than his years.”

One evening he came straight home from school, and going up to his mother's room, lay down on her bed. There she found him late in the evening. No one had missed him, for he was usually on the street. He was breathing heavily in his sleep, and his face was highly flushed. All night he was delirious, and tossed in his sleep, talking now of Miss Nannie, and then muttering oaths and low talk that had been all too familiar in his ears all his short life. The doctor was called in the morning and pronounced it malignant diphtheria. He was only ill a few hours, and toward the last fell into a stupor from which they did not expect him to arouse. Just before the end, he opened his eyes, and looking up, said:

“Yes, God, I'm comin'; you know me; Jess Jim—Happy Jim.”

He didn't breathe again; there was no struggle, but a look of content of such perfect peace settled on the little round face that his mother sobbed out, “Thank God! Thank God!”

“Yes,” she said to Miss Nannie, when she came with flowers to lay in the little hands now so white and cold. “Yes, I'm glad he's gone. He was a sweet baby, Miss Fletcher, and he filled an empty spot in my heart when he came; but I had to push him away from me as soon as he could barely toddle, for you see,” she said, “there was work to do. I had no time to take up my boy and feel his little, soft arms about my neck. Boys grow away from their mothers so fast, too, and what was cute in him at first was soon rough and rude. Maybe if we hadn't come up here to the hotel he'd have been different, but it's a bad place to bring up a boy. The men have all helped to spoil him. He was a better boy, though, after he went to school, Miss Fletcher, but there was too much against his making a good man; so I'm glad he's safe. I love babies,” she said, her tears streaming on the little face with its look of strange content, “and he was so sweet when he was little; but I'm glad; yes, I'm glad he's gone.”

“Yes,” said Miss Fletcher softly, wiping her eyes, “for of such, even 'of such, is the kingdom of heaven.”

A California Boy on Minnesota.

EDITORS PRESS:—I will write the young folks' column a letter about Minnesota. The winters in Minnesota are long and severe and the summers short and warm. The second berries are blueberries; the folks go out and pick them to sell. The first berries are wild strawberries and then there are cranberries. There are hazelnuts which grow wild everywhere. They raise peaches in some places. They pile straw on the trees.

I have a picture of the Ice Palace at St. Paul. I have three sisters and two brothers in Minnesota now. There are many wildflowers growing out in the woods. They have fun there in winter as well as they do here; I think they enjoy themselves a little better sliding down hill and snowballing. They have toboggan slides, sleds and suits at the Ice Palace.

The toboggan sled is made flat on the bottom and curved at one end; they slide about a block down the street. They storm the Ice Palace with fireworks. The summer king storms the winter king who has possession of the Palace. I would like to send you all a picture of the Palace. When they have a storming the city is so crowded that you can hardly see it. The people rent their windows to see it for a dollar apiece, and you have to engage them a long time before hand. The men and women of the toboggan clubs are dressed in blankets. Every toboggan club in the State goes to see the storming and helps to storm it. The toboggan slide is at an angle of about 90 degrees. [Whew! That's a pretty steep slide.—EDS. PRESS.] They throw snow on it and then sprinkle it with water.

The most beautiful place in summer is the upper part of the Mississippi. They ought to fetch some prairie chickens from Minnesota to

California. There the lakes are so thick with fish you can throw them out with a pitchfork in the winter where there is an airhole. cyclones come up they are beautiful, but don't want to be more than a mile from them. When my father first came to Minnesota the deer were so thick that you could stand in a door and shoot them. There are about 10,000 lakes in the State of Minnesota, and about all have fish in. E. G. DELAMATER.

Newcastle, Cal.

DOMESTIC ECONOMY.

CELERY SALAD.—One head of cabbage, three bunches of celery chopped very fine; take one teacup of vinegar, lump of butter the size of an egg, yolks of two eggs, one teaspoonful each of mustard and salt, a pinch of cayenne pepper, two teaspoonfuls of sugar; mix well, then put on the fire and heat until it thickens, stirring all the time; when cold, add two tablespoonfuls of thick cream, pour over the salad, and if it is not moist enough add a little cold vinegar.

STUFFED PORK.—Make deep incisions in the meat, trim so as to leave the skin longer than the flesh; then parboil some potatoes, mash, season with butter, cayenne pepper, salt, a minced onion and a little sage. With this dressing fill the incisions, draw the skin down and skewer it over. Season the outside by rubbing with salt, cayenne pepper and sage. Roast slowly. When done, skim off the fat, thicken the gravy with browned grated chicken. Serve with apple sauce.

SALMON CROQUETTES.—To make salmon croquettes boil half a pint of milk, thicken it with a tablespoonful of flour and let it become cold. Mince a pound can of salmon or one pound of fresh salmon. When very fine add a saltspoon of white pepper. Moisten the minced salmon with the boiled milk, work to a paste and add breadcrumbs if too thin. When wanted, shape into cakes, rolls or cones, dip in egg and crumbs and fry in hot fat.

LOBSTER BISQUE.—Take one good, firm lobster; take all the meat out and make a broth with it. Take the shell and pound it very fine. Put one quart of water, one onion and a carrot to boil for one hour; strain and keep cool. Chop the meat very fine; make one quart of cream sauce with the broth. Let it simmer gently and pour the stock made from the shell. Keep the carrot and the claws separate, cut in small dice to garnish the soup, and when finished add a pat of good butter.

CRYSTALLIZED FRUIT.—Take slices of orange or clusters of grapes, or any other fruit desired, and dip them first in white of egg beaten to a froth, and then in pulverized sugar. Lay a sheet of paper in a pan; spread the sugar and fruit on it, set it in a cool oven until dry, then keep in a cool place. It is quickly done, and is a pretty variety for the lunch table.

CREAM CAKE.—One cup of butter, two cups of sugar, whites of two eggs, $3\frac{1}{2}$ cups of flour, one cup of sweet milk, one teaspoonful of soda, one teaspoonful of cream of tartar. For the cream: One pint of sweet milk, sweetened to taste, yolks of three eggs; thicken with flour to the consistency of custard; flavor with lemon. This amount makes two good-sized cakes.

BEEF JELLY.—Take about one pound of lean, juicy beef, cut it into small pieces, put into cold water and let soak for one hour. Then put on the fire with one pint of water, seasoning with salt, pepper and a little celery seed, and let it stew until reduced two-thirds; strain on a few blades of mace. Serve hot.

MASHED POTATOES.—Boil a sufficient number of potatoes, peel, then crush them with the potato-masher; to a dozen large potatoes add one egg, well beaten, a tablespoon of sugar, and a cup of cream or milk; beat together, and sift through a colander into the dish they are to be served in.

FRIED CAKES.—One pint of sour milk, three tablespoonfuls of melted lard, two quarts of sifted flour, two cups of sugar rolled fine, a little salt and half a nutmeg; mix all well together, then add two tablespoons of soda, dissolve in one-eighth of a cup of lukewarm water.

RISE PUDDING.—One-half cup of rice, salt, and one cup of raisins, boiled until the raisins are tender and the rice dry. Add a custard, and pour into a pudding-dish set in a pan of water, and do not bake too long. The rule for the custard is four eggs to a quart of milk.

BREAD SAUCE.—Crumble some stale bread very fine; set it on the fire in a saucepan with as much sweet milk as will make it thick; put in a slice of onion and stir it till the bread is soaked and the sauce is quite smooth. Season with pepper and salt.

CAKE.—One cup sweet milk, one cup brown sugar, one-half cup molasses, one-half cup butter, four cups flour, one-half pound raisins, one cup currants, one tablespoon salt, one of cloves, one of cinnamon, two of baking powder, one nutmeg, two well-beaten eggs.

GINGER SNAPS.—One cup of molasses, one cup butter, one cup sugar; place them on the stove and let boil, and add teaspoon soda and tablespoon ginger and enough flour to make soft dough. Roll thin and bake quickly.

PICKLED FISH.—Spice the vinegar, cooking the spices in a bag; when hot, put the fish in and let it boil slowly until tender. Take out carefully and lay away in a stone jar.

The Week.

Two groups of splendid showers have refreshed a great area of the State since our last writing. The downpour was most acceptable after the drying winds of the preceding fortnight, and seems to insure fullness for the season, for, though the year's rainfall figures are not large at many points, the distribution has been timely. It is fair to expect good returns from field, orchard, vineyard and garden this year. Such an outlook inspires content and confidence, and our people generally are fully indulging therein.

The chief question in the fruit districts at present is concerning the labor supply. It looks as though all available force would be required. As we have already stated, a band of young men from the East were speedily placed in the Vaca valley, and no doubt among the year's immigration quite an amount of help will be available for the fruitmen; but whether enough or not cannot be foretold. In the Winters district there will probably be a number of Indians brought from the North. Over a hundred negroes with families, coming from North Carolina, have been placed in Fresno at \$15 per

month, and they say there are many more in the South who would prefer \$15 per month in California to \$7 in their present homes.

The Age of Science.

Sir Isaac Newton describes matter as some thing that when at rest will remain so forever unless moved by some outside force, and when in motion will keep on forever unless some impediment intervenes. It has an obstinate tendency to go on doing just what it is now doing.

Man, with all the complications and possibilities of his higher nature, inherits the same tendencies. He is conservative to a degree, and yet when once started in a new direction, it is difficult to divine where he may come to rest.

In looking over the earth we find man in every stage of improvement from the simplest savagism of Africa and Australia to the highest grades of Europe and America. The tendency to stand still is apparent in almost all nations. A state of motion is the exception, and seems always to wait for a grand exciting cause.

How long has man been in attaining his present condition? Lay the term when you may, and how unequal the march has been from barbarism to civilization, history dawns upon us some 3000 years again. We had taken all the previous ages in learning to record events. From that time we may form some estimate of the progress of different races.

China was then foremost, with an arrested development. She had got to the length of her chain. Egypt would seem to have fallen back. The pyramids were marvels to the men of those days. The Arab had reached his culmination. He is there to-day, as he was when Moses met him in the wilderness. A well was his grandest work.

Taking a map of those days, and picturing on it the people as they were, few have made the least advance, save from the impulsion of those without. No nation has risen up without an infusion of new blood by colony or conquest.

The races Asiatic, African and European met each other about the head of the Mediterranean sea. They mingled, fought, intermarried, and more vigorous blood and better mind seems to have been the result. If a circle be formed, with its center at Tyre and its circumference at Rome, it will include all the space occupied by the three races, with any kind of admixture. Outside of it all are of pure blood, one or the other, while within you find the half-strains—the fruit of miscegenation.

And among these the best foundations were laid for the future progress of the race. Egypt led the way in agriculture, architecture and religion. Greece refined on these, and added letters, music, sculpture and painting. Rome contributed government, conquest and law. And the Church planted in Rome by the Emperor, as a part of the State, became the most complete and solid hierarchy in the world. It is so to-day, though in decadence.

Westward the seat of progress seemed to move. France—Paris—climbed over Rome as the center of power and art. London seized the crown, and holds it still. England entered upon a new career. Greece, Rome, Paris, are all exceeded in their own specialties. She has more arts than Greece, more colonies than Rome, more science than Paris, and one thing more. She has called up all the powers of nature to aid man in the labor of his hands. The wind was known as a servant for ages, and water has turned the mills of the gods for thousands of years. But she called up other spirits—fire, steam and gunpowder—to her aid.

She illustrated all the powers of motion, how it could be made straight, rotary, eccentric, all that was wanted, and converted from one to the other at will. She made fingers of iron and steel, and twisted fibers into garments of the richest texture. She gave the world a new age. She "called spirits from the vasty deep" and made them work for her. Coal, fire, water, iron, air, all the elements of nature became her slaves. With only 20,000,000 of people in 1840, she had machinery equal to the labor of 600,000,000 of slaves. She did more work than the Chinese Empire. An Englishman was a magician who wielded the strength of a hundred men when he touched the valve of the steam engine.

Her ships cover the seas. Her arts and arms enrich and subdue the earth. She is the great teacher of the nations. In fact, the English age is capturing the world.

China may repel her religion, her literature and her law, but cannot repel her gunboats. They teach a lesson that must be heard. And all the world must have them, or yield to those who do. And with them sooner or later will go the law and religion. All the nations of the earth will be woke up now. No *vis inertia* can withstand those guns. They must all fall into line and be savages no more.

And we of this country are heirs—natural-born heirs—of this new dispensation, and with a broader base to plant it on than the original inventors. With fields, forests, fisheries and mines of inexhaustible riches, we have all her engines of production. Double her people, forty times her territory, ten times her freedom and twice her genius and invention, who can predict our career? Who shall set bounds to our prowess? It is not in man to conceive our glory in the year 2000.

Ah! if our wisdom, our morals, our knowledge of Government, shall keep pace with our other achievements, our country in a hundred years will rival the dreamland of the Utopian. We shall not be laborers in those days, but magicians, who do but speak to the spirits of earth and air, and they come forth to do our bidding.

"The fount of life shall then be quaffed
In peace by all that come;
And every wind that blows shall waft
Some wandering mortal home."

The Tariff Question.

The minority report of the Committee of Ways and Means on the tariff question was introduced in Congress on Monday. It discusses the effect generally upon American industry and especially notes the disastrous effects which will result to the agricultural interest. One comment is as follows:

The American farmer will appreciate the vicious character of the bill when he is apprised of the fact that while the products of land and labor are shut off from Canada by the protective tariff imposed by the Canadian Government, the Canadian farmer can send many of his products here without the payment of duty.

Concerning the effect upon the wool industry, which has unfortunately been the point upon which the free-traders have centered their forces, the minority report says:

Why have the majority put wool on the free list? The purpose is to bring down the price of wool. If this should be the result, we inquire, at whose expense and loss? It must be at the expense of the American grower, and to his loss, who, at present prices and with the present duty, is being forced out of the business by ruinous foreign competition. The injury, by the confession of the majority, will fall upon American wool-growers. The bill will greatly increase imports of the foreign product and diminish, if not wholly destroy, our own production. * * * Wool upon the free list is a deadly assault upon a great agricultural interest, and will fall with terrible severity upon a million people. It will destroy invested capital, unsettle established values, wrest from flock-masters their lifetime earnings, bankrupt thousands of our best and most industrious farmers, and drive them into other branches of agriculture already overcrowded. Finally the report declares the battle in defense of American industry will be resolutely fought, in the following words:

"We regard this bill as a direct attempt to fasten upon this country the British policy of free foreign trade. So viewing it, their sense of obligation to the people, and especially the working people employed in manufacturing and agriculture, impel them to resist it with all their power. They will assist the majority in every effort to reduce the redundant income of the Government in a direct and practicable way, but every effort of fiscal legislation which will destroy or enfeeble our industries will be met with the persistent and determined opposition of the minority represented in the House."

FUNDS FOR IRRIGATION.—Balloting in the Central Irrigation District, April 2d, on the question of issuing bonds to the amount of \$750,000, resulted in a vote of 159 for to 17 against in Maxwell, Williams and Norman, the three largest precincts. This practically carries the measure, pending the decision of the Supreme Court as to the constitutionality of the Wright bill, which is expected within 30 days.

California Lumber Trade.

Every one who has traveled very extensively throughout the State during the few months last past must have noticed the unusual activity everywhere manifested in building. Cottages, mansions and dwellings of every description are going up on all sides and in every direction. Although this activity is more apparent in the Southern portion of the State, it is seen largely on the increase all the way from the Southern portion of the San Joaquin valley to the very Northern extremity of the Sacramento valley, and even beyond, along the line of the Oregon railroad.

The indications are daily growing stronger that there will be a largely increased demand for lumber in Central and Northern California the coming summer and fall than ever before. The same is true, also, up and down the coast, more particularly in the lower Central coast counties.

The lumber business in this city was never more active than now, although lumbermen are not very sanguine that the present prices can be maintained through the season.

The increase in the lumber fleet during the past season has been quite large. Aside from sailing vessels there are now 15 steam schooners plying up and down the coast, mostly engaged in the lumber business, and it is stated on good authority that at least 15 more vessels of the same class are under contract to be built during the present season, all to be furnished with compound engines. These vessels move quickly and load and discharge very rapidly. They can steam from 9 to 12 miles an hour and lose no time in port. They are often discharged in this port in a single day and are off without waiting for wind or tide. A large number of barges and fore and aft vessels have also been added to the lumber fleet during the past season. A four-masted schooner and a steam schooner are being built at Port Madison, W. T. The steam schooner will be the largest on the coast and will have a carrying capacity of 450,000 feet.

New sawmills are going up in every direction, stimulated by the present unusual demand for lumber. The Loma Prieta mill at Santa Cruz is now in active operation, cutting about 70,000 feet of lumber per day. The Pacific Lumber-mill at Felton is also in operation, turning out 40,000 feet per day.

Moore & Smith, the lumber merchants, who recently purchased 3000 acres of timber land in Fresno county, are erecting two sawmills about 60 miles up Kings river from Fresno, where the timber belt is situated. The two mills will be of a large size, and will have a combined capacity of from 160,000 to 200,000 feet of lumber a day. A railroad will be built to the timber lands from Centerville, about 20 miles below Fresno. The road will be built up the King's river canyon to the site of the mills, with a prospect of its ultimate extension some miles further on.

There is standing in the belt of timber in the mountains, near where these sawmills are being built, fully 1,200,000,000 feet of lumber, 900,000,000 of which is redwood. Fresno county has the largest grove of redwoods in the world, it being 3600 acres in extent, and the majority of the trees being from 20 to 32 feet in diameter. A flume, 20 miles long, will be built to tap this and a belt of sugar pine and yellow pine, which is estimated to contain 750,000,000 feet.

The State Board of Trade.

At the regular meeting in this city on Tuesday the following resolution introduced by General Chipman of Red Bluff was adopted:

Resolved, That this board arrange a series of meetings under the direction of the Executive Committee, to be convened by the several county boards having membership relations with this board, and that a committee of three persons be appointed to attend such meetings as representatives of this board with a view to the mutual discussion of the plans and methods best calculated to secure the objects for which this board and the various county boards were organized.

Resolved, That the first meeting of the series be held by the Tehama County Board of Trade at Red Bluff on some day next week.

The objects of these meetings are to secure harmony and unity of action among persons and communities desirous of adding to the population and developing the resources of the State, to stimulate local improvements in interior towns, and to advance the interests of the country generally.

The Spanish Tongue in California.

California, since the time of the American occupation, furnishes a notable example of the manner in which the spoken language of a people may grow and wane through the commingling of races speaking different tongues. Prior to the inauguration of the gold-mining era most of the Americans who had arrived in California found it convenient to gain some knowledge of the Spanish, not a few of them mastering it completely. Among the earlier immigrants nearly all the younger members learned to speak the Spanish fluently, the elder picking up such words and phrases as were used in the transaction of business, and in conducting the more ordinary affairs of life. The two races saluted each other in either language, the Americans generally conforming to the Spanish mode, as, indeed, the latter people do not, nor have they ever taken readily to the English.

With the influx of immigration consequent on the discovery of gold, the English speedily became the predominating tongue, few of the newcomers trying to learn, or even paying any attention to the Spanish, as in fact there was no longer much need for their doing so. But while this language was so suddenly and almost wholly ignored, there had already been a great many Spanish words added to our vocabulary, some of them having been engrafted on it through sheer necessity, there being in the English no word for expressing the idea intended to be conveyed; and this for the reason that the thing itself had among the Americans no existence. They were obliged to adopt the terms corral, vaquero, rodeo, and the like, simply because there were no such things in the United States, nor had our people ever seen or heard of them. In like manner we had to adhere to the names given the trappings and implements of the vaquero, and to the caparisons of the caballero or horseman, such as tapajo, mochila, tapabero, cincho, lasso, etc. We had to continue calling a certain style of vicious animal a *bronco*, because the *bucketing* horse was a brute unknown to our people and with which they had happily had no experience.

Some names at first adopted by the Americans have since been wholly or partially dropped and English ones substituted in their stead: *embarcadero* has, with few exceptions, given place to the English term *landing*; *punta* has in most cases yielded to *point*; *pueblo*, to *city*; *presidio*, to *garrison* or *fort*; *rio*, to *river*—and so in many other instances. In designating natural objects, we have sometimes shared the names with the Spanish; thus we have in California ravines and canyons, *arroyos* and creeks, etc. In this State we retain the Spanish name *salinas*, but in Arizona they call a stream marked by the same peculiarities *salt river*. The Spanish *los* has generally had to succumb to the English definite article *the*. Where retained, as in the case of Los Angeles, our people, yielding to the national instinct, manage to give to the *o* the short sound instead of preserving the long sound which that letter has in Spanish. When it came to gold mining, this being an entirely new industry with the Americans, our language was without the terms and the phraseology pertaining to that business, hence the Spanish names such as *placer*, *batea*, *arastra*, etc., were by us accepted and have since been retained. The practice common among miners in early times of rushing off hastily to new diggings having made necessary a term for expressing this peculiar phrase of mining life, the word *stampede*, a corruption of the Spanish *estampada*, was adopted and is still in use.

Formerly the word *Ranch*, a contraction of the Spanish *Rancho*, was here in common use, being applied to every kind of landed estate. Since the large Mexican grants have been subdivided and the smaller holdings have come to be cultivated after the American fashion, the English term *farm* has in great measure superseded the Spanish *Rancho*, though chicken ranches, hog ranches, etc., still continue to be spoken of, and for designating these, the phrase is very convenient. Indeed we might well have retained much more which, in primitive times, we had the good sense to accept from that beautiful and expressive language, which, in so far as we have made appropriations from it, has greatly enriched without at all enfeebling our mother tongue.

Killing Animals Humanely.

Humanity requires that animals be killed in the quickest and least painful manner. The Massachusetts Society for the Prevention of Cruelty to Animals has issued a circular to the police of all Massachusetts cities, and to 450 agents of the society throughout the State, giving diagrams, and directions for killing. We give herewith the engravings, which may be of some interest and use to our readers. In the case of the horse and ox, the following directions are given:

Shooting.—Place the pistol muzzle within a few inches of the head, and shoot at the dot, aiming toward the center of the head.

Blows.—Blindfold, and with a heavy ax or hammer, strike just below the forehead, at the point indicated in the present cut. Two vigorous, well-directed blows will make death sure. Be careful not to shoot or strike too low.

In killing the dog, especial emphasis to shooting at the side of the head, as shown in the engraving.

Shooting.—Place the pistol muzzle near the head, aiming a little one side of the center of the top of the skull, and shoot downward at the dot, so that the bullet shall go through the brain into or toward the neck. Do not shoot

POINT FOR SHOT OR BLOW TO KILL ANIMALS HUMANELY.

too low, or directly in the middle, because of thick bones. The engraving of the dog's skull shows the thin place in the bone in contrast with the thick central ridge.

After much consultation with veterinary surgeons and experts, the society announces that no better or more merciful method of killing cats has been found than to put, with a long-handled wooden spoon, about half a teaspoonful of pure cyanide of potassium on the cat's tongue, as near the throat as possible. The suffering is only for a few seconds. Great care must be used to get pure cyanide of potassium, and to keep it tightly corked.

NIGHT AND DAY GROWTH.—Fruit trees acquire most of their growth by night. The fruit of the cherry laurel, for instance, increases at the rate of 90 per cent at night and only 10 per cent by day, while apples increase 80 per cent at night and 20 per cent in the daytime.

WILD CATTLE in great numbers are said to frequent the Umpqua valley in Oregon. They originated from a pioneer's herd that became wild in 1853. Some of them are 25 years old. They smell a man a long distance, and are as wild as deer.

A TRACT of 1400 acres in the Simi ranch has been sold to a gentleman from Illinois. A colony of 100 families who will settle upon it are on their way from the State mentioned.

THE Excelsior Lumber Company of Eureka has decided to do away with oxen for use in the logging woods, substituting horses for that service.

QUERIES AND REPLIES.

Important Facts in Potato-Growing.

EDITORS PRESS:—Less than 20 years ago the soil in this valley produced 12 tons per acre of large, smooth potatoes, and of excellent quality. At the same time the yield of oats was from 90 to 100 bushels per acre. Now, with far better cultivation, the yield of potatoes is about four tons per acre, very much smaller, less smooth, and frequently of an inferior quality, while the yield of oats is from 75 to 80 bushels per acre, and of high grade.

This shows a falling off in potatoes of 66 per cent, whereas that of oats is but 10 to 15 per cent. As potatoes is our most profitable crop, I am induced to ask you the following questions:

1st. Can anything be done to restore in any considerable degree the former yield?

2d. Would an analysis of the soil be necessary to determine that matter?

3d. If so, how should the soil be taken and in what quantity; and what would be the cost?

Should you deem it useless to answer any or all of the above questions, could you advise me as to what course I should pursue that would be most likely to show good results?

Where barn-yard manure is used it seems to cause the scab and a predisposition on the part of the potato to rot.

The valley is situated at the northern extremity of Humboldt bay, has an elevation of 8 to 12 feet above the sea level. The soil is a heavy, black loam ranging in depth from 10 to 30 inches, with clay subsoil, holding the water like a pitcher. Any answers to the above questions through your paper will be gratefully received.—DAVID WOOD, Arcata.

EDITORS PRESS:—Your letter requesting

The farmer's main dependence for fertilizing material has always been, and I think will always be, upon the barnyard, but it is evident from the system of farming practiced in this State of cropping the land to the exclusion of stock, in too great a degree, the barnyard supply will be and is sadly deficient, and if we wish to keep up the fertility of our soil we must resort to commercial fertilizers. The question with us is, will it pay? We know with the prices of cereals at present, and the constantly decreasing crops, there is but little and in some years no money in crops. We must restore the fertility of our soil or farming will soon cease to be profitable.

The value of commercial fertilizers can only be ascertained by personal experiment. My experience in this matter is, I confess, very limited, but what little I have inclines me in its favor. Last season I experimented with bone-meal in my garden, with marked increase in its products where it was used. This season I am experimenting with the "high-grade vegetable fertilizer" and bone-meal on a larger scale, and if it meets my expectations shall use considerable next year.

According to Prof Hilgard's writings, there is a deficiency of potash in the soils of this State. Now, as the "high-grade vegetable fertilizer" advertised in the RURAL PRESS is rich in nitrogen and potash, it seems to me peculiarly adapted to the wants of the potato. The following is stated to be a fair analysis of a fair average farmyard manure and the "high-grade vegetable fertilizer" advertised in the PRESS:

	Farmyard manure, lbs.	High-grade fertilizer, lbs.
Phosphoric acid	10	240
Nitrogen	10	80
Potash	8	200
2000 lbs. of each.		

Now I wish your correspondent would try the experiment. He can try it on a small scale and give the result of his experiment in the RURAL PRESS next fall for the benefit of the whole RURAL family, and I will do so also. By writing to Prof. Hilgard at Berkeley he can get the University Bulletin giving all necessary instructions in relation to analysis of soils, cost, etc.

One thing is certain, we have got to stop cropping our land and diversify our farming or go to heavy expense in fertilizers to keep up the fertility of our soil. The blight in potatoes exists to some extent, but less than formerly; the changing of fields and seed is a remedy. The old system of cutting seed to one eye is a thing of the past, as cut in this way nearly half rot in the ground and never come up. Cutting fair-sized potatoes through the seed end in halves or quarters gives the best results.

I would like to see the experiments of others published in the PRESS. Anything tending to a better, broader and more comprehensive system of farming would be useful and entertaining.—E. H. CHENEY, Smith's Ranch, Sonoma County.

Killing Moles.

EDITORS PRESS:—I have been for many years a subscriber to your valuable paper, and during that time we have had a great many directions in regard to the killing of gophers; now what I want is some instructions for killing moles. They are giving me a great deal of trouble. If you will kindly give your attention to this matter in an early issue of your paper, I shall think it a great favor, and no doubt there will be many more of your subscribers of my way of thinking.—OLD SUBSCRIBER, Sebastopol, Sonoma Co.

We should like to hear from successful mole-killers.

Buckwheat and Timothy.

EDITORS PRESS:—Please inform me through the PRESS when is the time to sow buckwheat; also if timothy will grow here without irrigation.—CONSTANT READER, Suisun, Cal.

Sow buckwheat when you would corn, when danger of frost is over. Timothy is not a trustworthy grass except in the extreme north of the State. It has a bulbous root which burns in the sun.

PRESERVING THE FORESTS.—Senator Hale lately introduced a bill prepared by the American Forestry Congress to preserve the forests, which is outlined as follows: "It withdraws from entry as forest lands all public lands of the United States more valuable for their timber than for agricultural purposes. It institutes the office of Commissioner of Forests, and authorizes the appointment of four assistant commissioners. The commissioner is instructed to form the forest land into what are designated as forest reserves. He is given power to frame rules and regulations for the government of these reserves, and to appoint rangers to see that the rules are observed. No forest lands are to be sold, but the stumpage on them may be disposed of in the discretion of the Commissioner of Forests."

A HEAVY FLOUR SHIPMENT.—The steamship *Abyssinia* sailed from Vancouver March 6th, for Yokohama, with 44 passengers aboard and a cargo of 1600 tons of freight, including 38,600 sacks of flour.

NEW SYNONYM FOR ORANGE.—Luther Burbank, the well-known Santa Rosa nurseryman calls the orange "a boom fruit."

HORTICULTURE.

Importance of Thorough Cultivation.

Gen. N. P. Chipman of Red Bluff, who is doing excellent service for his part of the State by his precept and practical example in horticultural matters, prepared the following timely article for the Red Bluff *Sentinel*. It should be carefully read by all new-comers to California, or by those who have but little experience in the growth of orchard and vineyard in this State:

I wish now to emphasize the necessity of thorough cultivation. Assuming that your orchard is planted and your first steps all well taken, your ground well plowed, and your trees well planted and cut back to the proper height, you are now to confront the question of cultivation. I know that many of you think there is nothing to be said on this subject that you don't know; that all there is in it can be said in a word; that anybody knows enough to cultivate the ground.

Let us see. Why do you cultivate at all? How often do you intend to stir the ground this summer? How deep will you stir it? In what condition will you keep the surface as to pulverization of the soil? At what time will you cease cultivating? How many are prepared to answer these questions? I have watched with great interest the tree-planting that is going on in this vicinity. Generally it is being better done than ever before; this is a good sign. But all this fine work will go for naught if you do not follow it up by good and thorough cultivation.

We all know the tree cannot grow in dry earth; that its food must first be dissolved and given to it through the aid of water. Water is the vehicle by which the nutriment is carried into the circulation of the tree. The importance of water to plant life is seen when we remember that growing plants contain from 70 to 95 per cent of water, and of trees it is quite large. The food must be taken through the roots, and is not absorbed by the leaves. Whatever of growth we are to expect of our trees must depend, therefore, upon the condition of the soil as to moisture. It becomes, then, vitally important to retain all the moisture possible, inasmuch as we do not irrigate, and are obliged to rely wholly on the rainfall.

We cultivate the soil often in great ignorance of the reason, and being ignorant of the reason we do not cultivate properly. I once ceased cultivating my vineyard at a critical time upon the advice of an ignorant gardener, who told me the weather was too hot, and that the more I exposed the earth the more the sun would evaporate the moisture, and I would in a short time blow all the moisture out. A slight crust had formed on top. "There," he said, "leave it now; and depend upon it, the moisture will not come out." My vines soon began to beg for drink. It was plain that something was wrong. My gardener said we had better haul water to them, and I rigged a portable tank and hauled water a mile. I was not satisfied and wrote Professor Hilgard. He made the whole matter plain. He said if I would put a dry brick on a wet sponge, the brick would soon absorb all the water; but if I would put a dry sponge on a wet brick the sponge would not absorb the water. My crust on the top of my ground was the dry brick on the wet sponge, and was rapidly taking up the moisture and giving it off by evaporation. Keep the tilth of your ground good, he said, and you will have no trouble.

I didn't know in those days exactly what he meant by tilth, but I went to Webster and found out that it meant the condition of the cultivated soil. I began to ask myself why the uncultivated ground outside grew dry for several feet deep, why summer-fallow land dried out, too, and lost its moisture, and why well-cultivated patches of garden and vines, and many vegetables, got along without rain or irrigation. A man came along with watermelons raised on similar land without irrigation, while I was in the act of wetting my vines, whose roots were two feet down under ground. I felt humiliated at my ignorance, discharged my gardener, put my hoe and cultivators at work, and managed to arrest the evaporation in time to save my vines.

Now, then, let us see how this great mystery is to be explained. If you break up your land in large lumps and leave it, you know it dries out rapidly. First the clods will grow hard and lose their moisture; then the general surface bakes, and then begins the fatal work of sapping the ground below. In proportion as you pulverize the lumps, you reduce the evaporating surface, and if you reduce these lumps to fine powder, this evaporating surface is all gone except the fine particles forming the surface.

Now, by keeping any crust from forming among these particles or beneath them for a few inches, you break and destroy the 10,000 capillaries that suck up and pass off the moisture. The finer the grain of the soil, the better it retains moisture, and the more nearly you can reduce your soil to dust or fine powder, the better it will retain moisture. If it were possible to give our orchards the treatment we do our gardens, we would be amazed at the tree growth. If your soil is coarse, it needs all the more working. I doubt if there is in the United States any soil superior to the slate soil of Thomas creek, and its value, in my judgment, lies in its

excessive fineness. It is rich in plant food, but it is richer in its capacity for retaining moisture and conveying its food to plant life. We must then pulverize, and keep pulverized, the soil of orchards.

Again, this top pulverization is like a woolen blanket thrown over ice; it also becomes a sort of mulch, and by its non-conductive quality holds the moisture in the soil below, whose vapors enter the root system, and thence into the tree circulation, carrying the life-giving properties of the soil. It isn't the water that sustains the tree any more than it is the frying-pan that gives you a supper; it is simply the vehicle by which plant food is prepared and given.

How often you are to cultivate cannot be answered. Once in two weeks, after the rainy season is over, is not too often, and it should not cease before August. Three or four inches is deep enough after your spring plowing, although deeper won't do any harm, and may help.

I want to warn you against the seductive spring shower. It falls and freshens everything, and probably soon after you have cultivated your ground. You think, how fortunate! But the fact may be (and you must look to see if it is not) just rain enough has fallen to wet the top of your ground, now in lovely tilth, and immediately this desiccating crust begins to form, and if left to remain it will pump out moisture—a great deal; more than fell to form it, and unless you break it with a harrow or cultivator that shower had better never been born. The spring showers must be followed up with your cultivator (unless they come close together) and all summer long you must not weary of this work, for you will have a rich reward in leaf and bud and limb and tree. All weeds must come out at once, for every one of them lives at the expense of your tree. Weeds are so many pumps working night and day to draw out the life sources of your tree. Next to a pestiferous insect feeding upon the leaf is the pestiferous weed feeding upon the tree roots.

Northern California, with its copious rainfall, needs no irrigation (however much tree growth would be promoted by it), but it does need thorough cultivation, and without that we will have failure, and only failure.

If I were to sum up in one word the secret of success in tree-growing, it would be—*cultivate*.

Orchard Cultivation.

EDITORS PRESS:—Methods of cultivating orchards are almost as diversified as methods of pruning, but thorough cultivation is, in my opinion, the more important. It will probably be admitted by all that the object of cultivation is to store the moisture that falls as rain or is put on the land by artificial irrigation, so as to sustain the tree during our rainless season. To do this a variety of implements are used, all aiming to accomplish the desired result, but with varying success. No one implement is capable of doing this, and different soils require different makes to reduce them at least expense of time and power.

After 15 years of experience in cultivation of fruit trees planted on the sandy sediment land in the section known as "The Willows," near San Jose, I am tempted to express an opinion as to the best method of cultivation and the tools used. The first work to be done is directly after the first fall rains, when the entire surface of the soil should be broken up. The object of this first cultivation is to open up the soil so that it may the more readily receive the rains and to destroy any weeds that may have started. A good implement for this work is a two-horse cultivator of about seven "teeth." The machine made by the San Jose Agricultural Works is a good one for this work, or some similar machine. When sufficient rain has fallen to wet the ground six inches or more, the orchard should be plowed to the depth desired, and not less than five inches. If heavy rains fall and vegetation starts rapidly, two plowings will be found beneficial.

The earth is now thoroughly broken up, but is full of clods which must be reduced to mellow earth or the moisture will rapidly evaporate, the clods acting as evaporating tubs. To do this two cultivators are necessary—one to bring the clods to the surface and the other to crush them. The seven-toothed cultivator mentioned above is excellent for drawing out the clods, and the "Acme" is the best machine that I have ever seen for finishing up.

By using these machines alternately, and running them about as deep as the ground was plowed, our "willow" land may be made "as mellow as an ash heap."

I may state here that I have tried the Lubin pulverizer, which is intended to accomplish the above result at one operation, but do not think that it can successfully compete with the two machines mentioned in our orchards. However, it is open to improvement and may yet prove a valuable implement.

H. G. KEESLING.

San Jose, March 31, '88.

EUROPEAN FRUITS.—It is telegraphed from New York that shippers of imported oranges and lemons to that port are making a strong effort to get additional advantages. Chicago and other Western markets where California oranges go expect to accomplish this by means of the adjustment of freight rates by the trunk lines' Classification Committee, which has been memorialized, but which has returned no answer. There is, however, some controversy among the large and small shippers. Large

shippers want the classification changed so that oranges and lemons shall be fixed at fourth class in carload lots and in second class for less than carload lots. Small shippers say that this plan virtually amounts to the continuation of the old rebate system in favor of larger shipments. Small shippers regard the delay in answering the petition as indicative of the trunk lines' uncertainty as to the approaching decision of the Interstate Commerce Commission regarding the legality of the carload and less than carload classification distinction now made by the roads.

Santa Clara Fruit Interests.

At the March meeting of the Fruit-Growers' Association of the Willows, S. R. Cushing, E. J. Delaney and Geo. A. Fleming were appointed to prepare a protest against the removal of the present duty on prunes, plums and other dried fruits, as provided by the Mills Tariff Bill, and forward it to Hon. C. N. Felton, member of Congress from the fifth district.

In their letter discharging that duty, under date of March 24th, the committee say: "There are at present more than a million prune trees planted in Santa Clara county, and only about 20 per cent of these are yet bearing. Twenty-five hundred families are engaged in growing prunes, and depend on its success for their support. Many of these have expended their all in planting and caring for young orchards which have as yet yielded no returns. We estimate that the trees now planted will within five years produce an annual crop of 35,000,000 pounds of dried prunes in Santa Clara county alone."

"The Willows" claims to be the birthplace of the California prune business, and the fruit-growers there appear to be unanimous in opposing any reduction of the low duty on prunes and dried fruits, as tending to crush a rising industry which promises ere long to supply the entire country with an article far superior to that produced abroad.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Who Is It?

Who sent us a postal note from Middletown, Lake county, without sending his name?
Who did the same thing from Selma, Fresno county, some time ago?
It is impossible to give proper credits unless people will send their names with the remittance. Let all subscribers take notice.
P. S.—If people wonder why their letters are not answered or the paper stopped when they omit the postage stamp on their letters, or misdirect them, or give them to parties who never mail them, whose fault is it?

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

A Rare Chance.

The Gabilan Rancho, situated in Monterey county, containing 7665 acres, is offered at \$36.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness avenue, San Francisco.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

Carriages.

We are receiving 10 carloads of Carriages, Buggies and Wagons from the Briggs Carriage Company of Amesbury, Mass., which will be sold at prices that will be satisfactory, considering style and workmanship. Quality of material guaranteed the best.

F. A. BRIGGS & CO.,

220 & 222 Mission St., San Francisco, Cal.

Buena Vista Rancho.

A portion of this Rancho, suitable for mixed farming or dairying, containing 1672 acres, will be offered for 30 days at \$35 an acre, one-third cash, balance in three years. Address J. C. HOAG, 312 Van Ness Avenue, San Francisco, or TYLER BEACH, San Jose.

AGRICULTURAL NOTES.

CALIFORNIA.

El Dorado.

FRUIT SPRAYING.—Placerville *Republican*: Last year two El Dorado horticulturists tried the experiment of fruit-spraying with most satisfactory results. L. M. Davis, Sr., sprayed 500 or 600 Bartlett pear trees with a solution of one pound of Paris green to 160 gallons of water. He found that this solution killed the pear slug and produced no visible effect upon the fruit or foliage, and, although he only sprayed the trees once, he found it very beneficial to the fruit. Spraying with this solution costs about three mills to the tree, besides the labor and expense for a pump. Earl Norton and his sister, Mrs. L. D. Delany, sprayed, last year, about 2000 pear and apple trees, using a solution of Paris green, one pound to 100 gallons of water. Although they only sprayed the trees once, yet the results were very satisfactory. One orchard that they sprayed yielded 600 pounds of good pears, while the year before it only yielded 11 boxes. An apple orchard that was sprayed yielded 150 boxes, and the year before, without spraying, only 29 boxes.

Fresno.

A SINGULAR WELL.—Rev. DeMundrum, who has resided on the West Side for several months, has given the Selma *Irrigator* some interesting points as to a gas well on Cantua creek. Not far from his ranch some sheepmen sunk a six-inch well for water for their sheep. They found water at a depth of 135 feet, which at once rose about 75 feet from the surface. The water is very hot and unfit for use until it has cooled off and certain gases escape. When free from heat and from the gaseous matter, it is pure and pleasant to the taste. Periodically a current of gas is emitted with such force that it can be heard at times for a distance of two miles, and actually shakes the house in which he lives, though several hundred yards away. It seems as if the gas vein had been passed through in boring the well, and that the reservoir is above the lower end of the tubing in the well, and that it is only when the pressure becomes great enough to move a column of water 60 to 70 feet in height that it escapes periodically and with great force.

WILD HONEY.—Fresno *Republican*, March 30: Joel Halbert, an old bee-hunter, living in Aubrey valley in the foothills, was in the city yesterday, en route home from a trip on Kings river. While down on the river, Mr. Halbert went bee-tree hunting, one afternoon, and in an hour and a half found seven trees. Three of these he cut down, and from them over 300 pounds of honey was taken.

Humboldt.

CHAMPION SOWER.—Eureka *Standard*: We are informed that William Griffin, an employe on John McNaughton's farm at Table Bluff, sowed 32 acres of ground from 7:30 A. M. to 5:30 P. M. Griffin says he has \$500 to wager that he can sow 40 acres in the same time.

CROP PROSPECTS.—Eureka *Standard*, March 24: Geo. W. Meek is in from Elk river to-day. He reports that the wet condition of the soil has prevented some farmers from getting their crops in up to the present date. The same report comes from some other portions of the Eel river valley. Wm. L. Collins, who lives on Eel river, below the Dungan farm, says the crop prospects in that section were never better. At his place the water was not so high by 3½ feet during the late flood as he has known it to be in former ones. Generally speaking, instead of being an injury, it was a benefit to land, because of the rich sediment which was deposited while it lasted.

Inyo.

ENLARGING HIS APIARY.—Inyo *Independent*, March 24: Mr. Muth-Rasmussen is building a storage-room for honey at his apiary at Camp Independence. The building will have double walls, so as to secure an even temperature as nearly as possible. It will be provided with shelves, where many thousands of pound-sections filled with honey can be stored. When the shelves are filled, sulphur will be burned in the room; two fumigations will be given, and then the honey will keep in a perfect condition for an indefinite time. Mr. Muth-Rasmussen is making a large addition to his apiary and will have much more honey for market than ever before.

Kern.

SIGHTS OF SPRINGTIME.—Bakersfield *Echo*, March 29: He is a strange man indeed who does not admire Kern at this season of the year. The alfalfa is fully boot-top high and as green as emerald. Other crops are coming forward rapidly, wheat and barley being about as high as the alfalfa, and fruit trees are well set with fruit. Not the least enchanting part of the picture, beheld during a ride through the country now, are the irrigating canals booming full of clear, sparkling water. The warm days recently have been unlocking the storehouse of snow in the high Sierras on the headwaters of Kern river, and the swelling tide that is coming down to gladden the fields tells of the abundance still in store up there. One sees less activity in the fields here than in the East at this season of the year. One reason for this is that the fields are devoted chiefly to perennial crops, alfalfa and fruit; but another important reason is that the farmer has the whole 12 months in which to do his year's work. He

has had since last October at least to sow his grain, and hence he is not crowded early and late now to "get his crop in."

BEE BUSINESS.—Geo. C. Doherty has established another bee ranch about three miles west of town. Our apiarists say but little about their profits, but it is noticeable that they continue to enlarge their operations.

Lake.

A FOOTHILL ORCHARD.—Lakeport *Avalanche*, March 29: The orchard planted last year at the foot of Uncle Sam mountain by Clendenin Bros. and Laughlan of Kelseyville, is in a flourishing condition. They now have 25 acres cleared, fenced and planted to trees, of which there are 2300. These gentlemen are entitled to considerable credit for their perseverance in proving that our chemical hill lands are valuable for fruit-raising. Of 750 trees planted last year they lost only about 30, all the rest being thrifty and flourishing. There is no doubt that this class of lands will prove more valuable for fruit-raising than some of our valley lands, the soil being better adapted to apples and prunes. There is a good deal of this same kind of land in Lake county that is open to location. But a man to take up such land must have money enough to clear off and plant his land to fruit trees, and also enough to live on until his fruit begins to bear.

AGRICULTURAL ASSOCIATION.—Ukiah *Press*: The directors of the 12th District Agricultural Association will meet at the courthouse in Lakeport April 14th, at 1 o'clock P. M., for the purpose of reorganizing the board and to make preparations for the next annual fair, President Long having notified the members to that effect.

Mendocino.

MORE ABOUT ARTESIAN BORING.—Dispatch and Democrat, March 23: Oscar Danton of Lake county has done a good work for Mendocino during the past three weeks, in that he has demonstrated that artesian water can be had for the boring. Some time ago Mr. J. B. McClure entered into a contract with Mr. Danton, by which the latter undertook to find water on McClure's ranch east of Russian river, and about three miles from Ukiah. The Rockford drill, worked by horse-power, was put in operation, and at the expiration of the three weeks a distance of 134½ feet was reached. After three weak streams or veins of water had been passed through and closed up by the pipe, a flow of clear water was struck strong enough to carry the water ten feet above the surface, and at the rate of about four gallons of water per minute. On Monday last the boring was resumed, and by Tuesday afternoon, when we visited the well for the second time, a depth of 154 feet had been reached, but without any perceptible increase in the flow of water over that secured on Friday last.

Merced.

RABBIT-DRIVE.—C. A. P. dispatch, Merced, March 29: The Merced people to-day enjoyed another great rabbit-drive. All the business houses in town were closed early this morning, and all who could procure conveyances repaired to the Lone Tree schoolhouse, where they formed a line inclosing several sections of ground, driving the rabbits into a corral, where at least 2000 were slaughtered, while hundreds were taken alive, and many more slain upon the plain while attempting to break through the line of vehicles and men and boys on foot and on horseback. Other drives are being arranged for the next two weeks in the southern part of the county. The farmers submit willingly to long trains of carriages passing abreast over their grain-fields, and pay out their money freely to defray the expense of corrals, considering themselves fully reimbursed by the destruction of the rabbits.

Monterey.

GOOD DAIRYING.—A Salinas *Index* reporter, who lately visited the ranch of Hiram Corey across the river, says that Mr. Corey milks over 300 cows now and makes about 15 boxes of butter, weighing 130 pounds each per week. He employs 19 white men and several Chinamen. Walter Emery, from "away down in Maine," superintends the dairy and makes the butter. The dairy-house is large and unusually neat, and the butter commands fancy prices in the San Francisco market.

Napa.

PRUNES.—Calistogan, March 28: Wm. Spiers now has prune trees growing on 11 acres of vineyard, every third vine each year having been removed for this purpose. Thus he can depend in a few years for a crop either upon the vines or trees, and whichever promises the greater profit he can retain and let the other go. H. L. Gibbs called the other day and took us out to his prune orchard, which, like others in this vicinity, is in full blossom and looks beautiful with its dress of snowy whiteness, while the air is redolent with perfume. A view of it at this time will well repay one for making a visit there. There are 35 acres of the orchard, though on a portion of it are growing small trees. Mr. Gibbs will have 50 tons of dried prunes this year, if unfavorable weather does not interfere. The prune orchards of John Walker and C. W. Lane, near Mr. Gibbs', also look very inviting and promise to yield bountifully. Garnett, Eastman, Hauge, Butterfield, Teales and others have orchards that will bear very well this year, and increase the yield of prunes in the Upper Napa valley to an extent worthy of consideration.

TALL BARLEY.—Napa *Register*, March 30: This morning S. B. Merrell brought to the of-

fice of the Napa Land Co. several stalks of tall barley, two feet eight inches tall. The seed was sown just before the rains in December last, on land one mile north of town. The grain was sown for hay, and the first crop will be ready to cut next month.

FINE HORSES.—A *Register* reporter visited Wm. McGraw's training stables and saw some fine stock. Chas. Scott's new Kentucky-bred horse, "Wilkes Pasha," is attracting much attention. He is of fine form and muscle and is in color a beautiful mahogany bay. Mr. Scott is also the owner of two Norman horses, "Tony Oakes" and "Henry Clay." The former was imported direct from France and is a dappled gray; the latter is one of the largest horses near Napa and is in color a bright bay. "Alcona," a handsome Hambletonian chestnut, belongs to Fred. W. Loeber of St. Helena. He is the sire of some of the finest carriage animals in the valley, stands 16½ hands in height, and weighs 1300 pounds. "Napoleon" is the property of Frank Fruehauf. He is 16 hands high and weighs 1600 pounds. As a draft horse, he is hard to beat.

Nevada.

ALFALFA.—Grass Valley *Tidings*, March 28: Mr. S. H. Dikeman of Rough and Ready was in this morning and left with us a specimen of Rough and Ready alfalfa, a stalk measuring two feet and six inches in length. This is early in the season for such a growth, but that is the way clover does in these foothills when given half a chance. The alfalfa crop of Rough and Ready township is valuable always, and we judge it is to be big this year.

Placer.

STATEMENTS AMENDED.—Loomis Cor. Bee: In your issue of March 22d you refer to the purchase of 30 acres from J. P. Whitney by A. T. Hatch, president of the State Board of Trade, and Washington Porter and J. K. Ormsby of Chicago, to be planted this spring in oranges exclusively. You state that this land is located between Newcastle and Rocklin. But these two places are more than ten miles apart! The point we wish to have clearly stated is that the choice citrus land, so selected by the above-mentioned noted fruitmen, immediately adjoins our town of Loomis. Again, the enormous reservoir of 40,000,000 gallons in course of preparation by Mr. Whitney on the ridge between Loomis and Rocklin would seem to be an excessive water-supply for the sole use of Mr. Whitney's raisin vine yard as left to be inferred by the Newcastle *News*. The fact is, it is designed to supply the large citrus slope lying between Mr. Butler's magnificent orchard near Loomis, and the town of Rocklin.

San Benito.

THE HORSE MARKET.—Hollister *Free Lance*: The next regular monthly horse market will be held at Kent's stable on Saturday, April 7th. The Hollister Board of Trade suggests to the owners of stallions that they give an exhibition of their horses the same day.

San Bernardino.

ON COLTON TERRACE.—Semi-Tropic, March 27: We noticed that Dr. Fox is taking up some of his deciduous trees and replacing them with citrus. He stated that the latter were far more profitable and a much better fruit to handle. The Navel, Mediterranean Sweets and seedling varieties of orange trees, and hundreds of lemon trees, occupy a good share of the doctor's 40-acre tract. The trees are in a healthy and well-kept condition. This year's crop has mostly been gathered. Some of the trees, however, are still loaded and present a pretty appearance. Many of them are breaking into bloom and are setting quite thick, promising a good crop for next year.

San Diego.

WINTER MELON.—San Jacinto *Register*, March 22: Last week we were shown a fine large watermelon which had been kept in Green, Ashenfelter & McLaren's office all winter. The melon was in a remarkable state of preservation, and apparently as sound as it was the day it was pulled off the vines; but then it was a little too ripe to taste good.

GRAIN ACREAGE.—Cor. San Diego Union: Your correspondent has endeavored to obtain an approximate estimate of the San Jacinto grain crop. Those who are best fitted for knowing make various estimates, from 12,000 to 15,000 acres, for the San Jacinto neighborhood, while the whole country to Perris, 20 miles away, is an immense barley-field. Look out for hay this fall, San Diego.

San Joaquin.

GOPHER SCALPS.—Stockton *Independent*, April 1: This is the season of the year when the farmer's boy takes advantage of the supervisors' offer of five cents apiece for gopher-scalps to rid the country of the "pesky varmints," and by so doing increases his little surplus at the expense of the county. Yesterday a youth brought 1000 gopher-scalps into the county clerk's office. These scalps were the remnants of a colony of gophers that made their headquarters on Union island. During the afternoon three bright boys, who, according to their own statement, "live on the Calaveras, a few miles out of town," brought in three separate bundles of gopher-scalps. The total receipts for the day were 2000 scalps.

San Luis Obispo.

COLT SHOW PLANNED.—Through the *Leader*, Shackelford & Steinbeck invite all owners of colts sired by "Young America" to participate in a colt-show to be held at Paso Robles, the

first Saturday in June, 1888. A premium of \$40 will be given the owner of the best colt with a dam weighing 1200 pounds and over, and \$40 premium to the owner of the best colt with dam weighing less than 1200 pounds—the exhibitors to select the judges.

THE STALLION SHOW.—Tribune: There were plenty of good horses, offering an ample guarantee of the future of the animal in the county. Mr. Shackelford sent over from Paso Robles his Suffolk Panch, somewhat of a novelty in the county, a splendid animal and one that will be of great service. Electro, another new arrival, a son of the great horse Electioneer, came up from Santa Maria. Mr. Arza Porter sent in Dagobert, a French coacher, recently imported and a very valuable horse. Alcona was there, gaily bedecked with ribbons, the chief of the party. So were his worthy sons Alallen and Toona Stewart. We noticed also Com. Nutwood, Fred Arnold, Duke McClelland, Dante, and a number of others, making a really splendid show, well worth the attention of breeders and horse fanciers.

Santa Barbara.

FARMERS ASTIR.—Santa Maria *Times*, March 24: There is more stir among the farmers of Santa Maria valley this season than ever before in the way of making improvements and brightening up their minds as to how to mix farming. They have found by long experience that raising grain at present prices with our present shipping facilities is not going to make any farmer rich; consequently they have concluded in connection with grain-growing to give attention to somewhat of a variety crop. As for fruit trees, there has been a greater number planted this season throughout this section than all previous seasons combined.

FROM CARPENTERIA.—Cor. Press, March 31: Many artesian wells are being bored in different parts of the valley, and water is found in almost every instance. A large flow has been struck at the depot. It flows a two-inch stream constantly. At the hotel is another large well. ... The farmers are busy plowing. A larger area of beans will be planted than for several years past, the increase in the price of that commodity encouraging the farmers to grow more beans. All fruits and walnuts promise an enormous crop. Grains and feed look better than ever before at this time of year. The honey crop will be very large.

MONSTROUS MUSHROOM.—A mushroom, perhaps the biggest ever seen in California, raised within the city limits, was yesterday shown to a *Press* reporter. It was 12½ inches in diameter; the stem, four inches from the ground, was three and one-fourth inches in diameter, and it weighed 21 ounces. The pulpy part was two and three-fourths inches thick. The mushroom was of an edible variety, and perfectly free from blemishes or parasites.

Sonoma.

POISONED BY WILD FLAX.—Petaluma *Courier*: A gentleman living near Stony Point, in this county, a few days since turned a flock of about 70 sheep into his orchard to eat down the wild flax and other grasses growing therein. He let them stay in all of one day, and at night 40 of them were down, 27 of which died. The wild flax bloated them and was evidently the cause of their sickness and death. Sheep-raisers should make a note of this.

A PRUNING BEE.—Republican, March 22: C. W. Winkler, who lives near Sebastopol, is prostrated by a severe attack of rheumatism; his wife lies seriously ill with pneumonia; his daughter has a badly sprained ankle, and his son a broken leg. As may be surmised, work on the Winkler farm has been sadly neglected of late. On Friday a number of neighbors organized a "pruning bee" and devoted their attention to the afflicted family's orchard. Over 1000 peach trees were trimmed. All the Green Valley farmers are orchardists, and each one an expert on the subject of pruning; but each one has a different style. The orchard which was pruned Friday will afford a good field for a comparison of these styles and a decision as to which is the best.

Tulare.

BIG FIG TREES.—Visalia *Times*: In 1857 J. W. Williams and others brought from Fort Tejon, Kern county, a number of fig cuttings, which were stuck in the ground on what is now known as the old Indian reservation on Tule river, four miles east of Porterville. These cuttings lived and thrived, and now there are 11 of the trees, the smallest one measuring four feet four inches in circumference, or 1½ feet in diameter; and the largest measuring eight feet three inches in circumference, or two feet and nine inches in diameter. Two other trees have a circumference of seven feet and one inch each.

Ventura.

EDITORS PRESS.—California's boom may have vanished in air, as some Eastern journals delight in asserting, but the interest turning toward Ventura county has but just begun. Until recently transactions in real estate have been chiefly between residents; prices have steadily increased, and now the tide of Eastern home-seekers turns this way; 100 good families from near Chicago are expected during the summer. These people will locate on a portion of the fine tract of land known as the Simi rancho. No one complains greatly at the prices asked for land, but all new-comers, and old residents as well, grumble at the exorbitant charges for some of our staple products. Where, pray, can beef be raised more cheaply or of better quality than in Ventura county? Yet our beef is not

good, and we pay from 10 to 18 cents per pound for it. The farmer gets 3 cents for pork and the consumer pays 18 to 22 cents for ham and 15 cents for lard. Butter ranges from 30 to 90 cents per roll, according to the season, but we have never paid less than 25 cents per gallon for milk, and regular "old blue" at that.—MAX, San Buenaventura, March 28th.

Yolo.

SCARING OFF COYOTES.—Rock Cor. Yolo Democrat, March 25: Feed on the hills is good and our cattle are "in clover." Sheep are doing well, and the loss, notwithstanding the strangely cold winter, has been very small. W. Levy of Madison owns a very large sheep-range here and his sheep are looking finely under the vigilant care of Mr. Hopkins, who has had several men employed to look after them and build fires on the range to frighten off coyotes and other vermin. A dozen or more fires may be seen any night burning at various points over the range. George says he expects to mark 2000 lambs this spring from 2600 ewes.

A HORSE'S LEG.—Davisville Cor. Democrat, March 26: A valuable horse belonging to Andrew Martin broke its leg about a week ago, and rather than see it shot Mr. Dunfred, a neighbor, agreed to take the animal and attempt a cure. Under the advice of Dr. Bates, the wounded leg was incased in a strong red-wood box and filled around with plaster. By this arrangement the leg is held firmly in position, and there is every prospect that the animal may yet live to do good service. Yesterday, in order to afford the animal some rest, it was swung up by means of broad belts beneath the body, and even while the operation was going on the poor worn-out brute had sunk heavily on the side of his stall, and slept soundly.

A VETERAN MULE.—Winters Express: E. J. Englehart showed us a large mule the other day that he said was his standby; he got her when he first commenced farming on the creek. The mule, he said, was brought across the plains in 1865, when she was five years old, and is yet able to do her share of the farm-work.

OREGON.

FRUIT-RAISING.—Oregonian: A. Fleckinstein, who resides on Columbia slough, began about 12 years ago by putting 20 acres in German prunes, Bartlett pears, etc. He always succeeded in getting a good crop. The secret of his success was in the fact that he was both careful and saving; and having a drier on his ground he wasted nothing. When he got a full crop his trees were so heavily loaded that it required five or six props to keep the limbs from being broken. Two years ago he cut away the limbs of the German prunes and grafted with Italian prunes. He makes a specialty of prunes and small fruits. The neighbors say he makes more from his 20 acres than they do from their hundreds. It is related of him that when a hog gets in his orchard he chases it out.

SWEET POTATOES.—Mark Levy makes the original remark, "Oregon agin the world!" and deposits a couple of very handsome, rather large and very yellow and natural-looking sweet potatoes, a sample of 1300 pounds just shipped to him from Medford, Jackson county. These are certainly good and merchantable tubers, and if Oregon can grow plenty of such—and she certainly can—it will be a valuable item of production, as well as much to the credit of the country. They can be grown with care in parts of the Willamette valley and along the streams of the upper country that have sandy shores and loam benches; they do remarkably well. When the business of production is fully developed, sweet potatoes won't be brought here from abroad, except as southern lands can produce them earlier than they can be grown thus far north.

MONGOLIAN PHEASANTS.—Portland News, March 20: Passengers on yesterday's California express report that many Mongolian pheasants are to be seen along the line of the road, particularly a short distance above Albany, in Linn county. The birds are usually in pairs, although sometimes a half dozen are seen at a time, and in some localities they are reported to be quite tame. During the cold weather, when snow was on the ground, these pheasants were not at all backward in taking a place in the barnyards along with domestic fowl, and even contesting with them for supremacy. From a Lane county farmer comes the story that a cock pheasant persisted in remaining among the chickens on the place after the snow was gone, but in this was stubbornly opposed by the recognized gallinaceous leader, and a number of bitter fights took place between the two birds. The difficulty was ended one morning by the pheasant striking his antagonist dead, and now the stranger rules the yard.

BERKSHIRE SALES.—Phil. M. Springer, Springfield, Ill., secretary of the Berkshire Association, sends us notes of the following sales of registered swine by Andrew Smith of Redwood City, Cal., to the following parties: Prince Albert 17981, Peggy 18081 and Queen Bess 18082, to Chas. A. Stowe, Stockton; Eden Boy 18137, and Eden Belle 18138, to Henry P. Mohr, Mt. Eden, and Cornear 18060, to J. S. Dodge, Redwood City, Cal.

As the time for Ontario to vote on the question of incorporating draws near, the argument waxed earnest and more than semi-tropical.

EDUCATIONAL.

University of California.

A great university may aptly be compared to a great mountain. From its central reservoir flow the perennial streams that gladden and freshen the whole country of literature, art and industrial activity. Such an educational center is the University of California. No institution of the kind more truly deserves the title of Alma Mater. It is the consort of the State and the foster-mother of its sons and daughters. Its blessings, like the beams of the sun, fall alike on the high and low, the rich and poor. None are excluded from its classes on account of age, sex, or condition. It is ample in scientific attainments, comprehensive in literary culture, and by its practical devices reaches every department of life.

This seat of learning, now quite as wide in scope as the best German Universities, was born of the Morrill Act that in 1862 donated as California's pro rata a magnificent domain of 150,000 acres, for the purpose of establishing Schools of Agriculture and the Mechanic Arts. In accepting of this royal gift the Legislature of California laid the foundation of a State University. In accordance with the organic Act, the Board of Regents was composed of twenty-two members, of whom the following were ex-officio: the Governor and Lieutenant-Governor of California, the Speaker of the Assembly, the State Superintendent of Public Instruction, the President of the State Agricultural Society, and the President of the Mechanics' Institute of San Francisco. Of the remaining sixteen, eight are appointed by the Governor with the approval of the State Senate, and eight are honorary members chosen from the body of the State by the official and appointed members. The following cluster of colleges constitute this university: A College of Letters, comprehending a classical course, literary course, or course in letters and political science; College of Agriculture; College of Mechanics; College of Mining; College of Civil-Engineering; College of Chemistry; College of Law; College of Medicine; College of Dentistry and a College of Pharmacy.

The University Buildings.

The buildings are sufficiently spacious and convenient for the present needs of the university. The two largest stand on a terrace more than 300 feet above tide-water, and command an unrestricted outlook over the bay and surrounding hills. They may be regarded as the historic structures, the nucleus of the group. The corner-stone of the Agricultural College, called South Hall, was laid in August, 1872, with public ceremonies. The corner-stone of the North Hall was laid in the spring of 1873. Both were so far completed as to permit the occupancy of most of the rooms when the university moved to Berkeley in the autumn of that year. Both buildings preserve the freshness of their first years. The architecture of South Hall is simple, but handsome. The material is brick trimmed with gray stone. In construction, it is solid and durable. It is 152 feet long by 50 feet wide, has four stories and 34 rooms, six of the rooms being 32x48 feet, and several others 20x20 feet. In it are the chemical laboratory, the agricultural department, the Secretary's office, and the instruction-rooms of the College of Chemistry; on the floor above are the lecture hall of Prof. Joseph Le Conte, the museum, and on the top floor is Prof. Jackson's department of mineralogy. The North Building is 166 feet long by 60 feet wide. It has four stories divided into 28 compartments, an assembly-room 43x58, a philosophical lecture-room 39x50, the University printing office, students' reading-rooms and various recitation-rooms. These two buildings are aligned with the main terrace. Back of them, and irregularly placed on the hillside, stand two buildings of later construction—the Bacon Art and Library Building, and the College of Mining and Mechanic Arts. The first is named from Henry Douglass Bacon of Oakland, who gave to the university his excellent collection of paintings, sculpture and miscellaneous works of art, a library of several thousand volumes, and \$25,000 to erect suitable buildings to contain these treasures, provided the State would add \$25,000 in furtherance of the project. The State appreciated the value and intelligence of the gift, and furnished the amount required. The building and its art contents will increase the facilities for study, and pave the way to a finer culture. Its outside is prepossessing, being of brick unobtrusively ornamented with stone. The architectural style followed within and without is the later forms of Gothic. There are, properly, two buildings in one. That fronting the west is rectangular; the rear building

is semi-circular. The front portion is 88x38 feet. The center of the facade rises into a tower 102 feet in height. The interior arrangements are well designed. There are broad lobbies and stairways, an elevator, reading-rooms, committee-rooms, store-rooms, and a large art gallery well lighted from the top. The rotunda of the library portion is 69 feet in diameter and 57 feet in height. It will hold 90,000 volumes. When the collection exceeds this, the capacity of the building can be increased without altering its proportions, by rectangular additions at the north and south ends. We give on another page a very good view of these respective buildings.

The University Grounds.

Perhaps no college or university was ever envied by such natural beauties. The groves of the Academe sifted through with dust from the ill-kept thoroughfares of Athens and overlooked by imposing temples of faultless architecture, were not half so rich in natural charms or so brilliant in foliage and color as these grounds. The University domain includes 200 acres of surpassing rich land. The west line is low down upon the plateau, the east line far up the hills. The contour of the ground is formed by Strawberry creek and its main branch, which issues from romantic canyons behind the buildings and runs some distance in front of them. They are bordered with oaks, laurels, willows, and the coast vegetation common to such localities. Near the angle formed by their confluence is an open space—the campus proper—used by the students for their games and *al-fresco* exercises. The grounds were laid out by William H. Hall, under the direction of the Regents.

The design is simple, involving winding drives, with entrances on the south, north, and west, serpentine walks, and a rather sharply defined terrace for the main buildings. The grounds have also been surveyed by Professor Soule with special reference to the water supply. The open portions, dotted with fine specimens of live oak, have, though untouched, a finished park-like appearance, and are gay with wild poppies, buttercups, primroses, and blue lilies through winter and spring. The improved places are filled with evergreen and deciduous trees, shrubs, plants and flowers from every quarter of the globe. A conservatory occupies one of the warmest nooks. The fields of the agricultural department are near the western entrance, and are, with their specimens of imported fruits, grains, and trees, undergoing a process of experimental culture, of the greatest interest to the farmer and botanist. No modern college has grounds like these. The German universities are usually in crowded cities, and without external attractions. The English universities have lawns that are ill-kept, and a few trees poorly cared for. The American colleges have not found it easy to cultivate handsome surroundings, on account of a severe climate and ungrateful soil. Cambridge has a lawn and trees. Yale has its elms and public green. Trinity college at Hartford has limited grounds which it is trying to improve. The New York colleges are much the same, except Cornell, which has a large domain still new. All is being done at Ann Arbor that can be done at a place so situated. The southern colleges might do more in their softer climate, but their grounds are neglected and forlorn. None are so favored in climate, universal capacity of production, and beauty of outlook as this. Art might do much to aid nature, but even without art nature was never more attractive.

The Presidents.

At a meeting of the Board of Regents held June 7, 1868, General George B. McClellan was elected president of the university, but being at that time in charge of the Stevens Battery, he declined the honor. Prof. John LeConte, who had a national reputation as a physicist and who had accepted a professorship in the university, was made acting president for more than a year, presided at the first commencement exercises, and conferred the first degrees on a graduating class of three who had been advanced students from the old and defunct College of California. D. C. Gilman, a tutor in Yale College, was elected president June 21, 1870, but declining, Dr. Durant was chosen and assumed the office in August. Dr. Durant retained the position until the re-election and acceptance of Mr. Gilman, July 20, 1872. When Mr. Gilman resigned the presidency in March, 1875, to take charge of the Johns Hopkins University in Maryland, he was succeeded by Prof. John LeConte, who was first chosen acting president and at the expiration of three months elected president, and who continued to occupy the position until the election of W. T. Reid, principal of the Boys' High school in San Francisco, in June, 1881. There was a general expression of satisfaction

when the Regents elected Prof. Edward S. Holden of the University of Wisconsin as president of the University of California. His brilliant reputation as a scholar and scientist caused very glowing expectations, and the public have not been disappointed; but Mr. Holden is by nature and taste an astronomer, and retired to take charge of the Lick Observatory. There his great astronomical attainments and practical knowledge cannot fail to be of distinguished service. As its director, there is every reason to anticipate for him a record of the highest order. On Tuesday, Jan. 31, 1888, the Hon. Horace Davis of San Francisco was, by unanimous vote of the Board of Regents, elected president of the University of California, and on Friday, March 23, was formally inducted into office. Mr. Davis enters upon his official duties under happy auspices. He is a graduate of Harvard College, a ripe scholar, possesses an easy, graceful address, sterling executive qualities, and is in the full vigor of his powers. His inaugural address was modest, free from pedantic scholasticism, but evinced the cultured and practical mind he is. He fully possesses the confidence of the people and the Regents, and the feeling seems generally shared that our university is about to enter upon a career of unparalleled prosperity.

The Lessons of "Unser Fritz" Case.

The greatest doctors in Europe don't seem to know what ails "Unser Fritz."

Thus are the Garfield and Grant episodes repeated, and public confidence in "expert" medical knowledge is again shaken.

The effect is a revolution.

Since the fatal days of 1883, many of the doctrines of the schoolmen concerning extensive medication have been abandoned, and all schools of practice are more and more relying upon old-fashioned simple root and herb preparations and careful nursing—the only reliances known to our ancestors.

These methods and reliances are illustrated to-day in a series of old-fashioned roots and herbs preparations recently given to the world by the well-known proprietors of Warner's safe cure—preparations made from formulae possessed by many of our oldest families, and rescued for popular use, and issued under the happy designation of Warner's Log Cabin Remedies.

"My son," exclaimed a venerable woman to the writer when he was a boy, "my son, you're yellier and pale and weak like lookin', you're needin' a good shaking up with some sas'paril'."

A jug of spring sarsaparilla was just as necessary in the "winter supplies" of 50 years ago as was a barrel of pork, and a famous medical authority says that the very general prevalence of the use of such a preparation as Log Cabin Sarsaparilla explains the rugged health of our ancestors.

While Warner's Log Cabin Sarsaparilla is an excellent remedy for all seasons of the year, it is particularly valuable in the spring, when the system is full of sluggish blood and requires a natural constitutional tonic and invigorator to resist colds and pneumonia, and the effects of a long winter. Philo M. Parsons, clerk of the City hotel of Hartford, Conn., was prostrated with a cold which, he says, "seemed to settle through my body. I neglected it and the result was my blood became impoverished and poisoned, indicated by inflamed eyes. I was treated but my eyes grew worse. I was obliged to wear a shade over them. I feared that I would be obliged to give up work."

"Under the operation of Warner's Log Cabin Sarsaparilla and Liver Pills," he says, "the sore and inflamed eyes disappeared. My blood, I know, is in a healthier condition than it has been for years. I have a much better appetite. I shall take several more bottles for safety's sake. Warner's Log Cabin Sarsaparilla is a great blood purifier and I most heartily recommend it."

A few bottles of Warner's Log Cabin Sarsaparilla used in the family now will save many a week of sickness and many a dollar of bills. Use no other. This is the oldest, most thoroughly tested, and the best; is put up in the largest sarsaparilla bottle on the market, containing 120 doses. There is no other preparation of similar name that can equal it. The name of its manufacturers is a guarantee of its superior worth.

While the great doctors wrangle over the technicalities of an advanced medical science that can not cure disease, such simple preparations yearly snatch millions from untimely graves.

THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

For Sale by all Druggists.

ALILA!

The Arcadia
—OF THE—
SAN JOAQUIN VALLEY!

THERE DOES NOT EXIST IN THIS VAST extent of country a section so manifestly destined for the site of

A PROSPEROUS TOWN,

Supported by the demands of a rapidly and steadily increasing population, as ALILA, THE ENCOURAGING NUCLEUS is already there, for Alila now possesses a well-conducted and

LIBERALLY FURNISHED HOTEL,

Several well-appointed stores, and, in addition to these, that most important feature and best evidence of progress, a

Handsome and Spacious Schoolhouse, Which stands nearly, if not precisely, in the center of the town-site. Alila is envied by

A MOST FERTILE COUNTRY,

A soil of surpassing richness, with the capacity of sustaining, in comfort and prosperity,

Thousands of Industrious Settlers.

The resources of this land are illimitable. At this season, in the surroundings of Alila, the plow is busy in every direction.

MILES OF GRAIN,

Soon to wave in luxuriant beauty above the sod now decked with wild flowers, will be a most substantial ornament to

ITS BROAD ACRES.

This scene of agricultural activity and brisk and intelligent cultivation is

A GRAND ASSURANCE

Of what the future must bring forth. The Southern Pacific Railroad

PASSES THROUGH ALILA,

And the stations and sidings there are about the best on the line.

ALILA

Is in Tulare County, 22 miles south of the city of Tulare, on the main line of the Southern Pacific Railroad.

Bovee, Toy & Co.,
19 MONTGOMERY ST.,

Are now offering a limited number of lots at private sale in ALILA, and intending purchasers should not delay in making their selections, as a

SERIES OF IMPROVEMENTS

Have already been inaugurated, consisting of grading streets, planting them with shade trees, increasing the irrigating facilities, and shipping material for the

ERECTION OF BRICK STORES

Upon the main street of Alila. This is a

Superb Opportunity for Investment,

Because the time is close at hand when

Wave after Wave of Eastern Immigration

Will fill up the great San Joaquin Valley, and every dollar placed in real property there will yield a four-fold return.

There are a few facts in connection with this property to which we desire to call particular attention:

First, the extreme richness of the soil has attracted a superior class of population, who are farming the land in an intelligent and progressive manner.

Every section in the vicinity of Alila, and for miles around contains from two to four houses, presenting a prosperous and comparatively well-settled country, owing to the fact that the land is held in small holdings, and not in those immense tracts of single ownership which characterize other portions of the valley.

There is no other locality so well adapted for successful fruit and raisin culture.

Again, Alila lies in the direct line of Walker's Pass, the lowest point in the Sierras through which other overland roads coming into the valley will in all probability lead.

For maps and further particulars apply to

BOVEE, TOY & CO.,
19 Montgomery Street, S. F.

Miramonte Colony

—IN THE—

GREAT ARTESIAN BELT,
KERN COUNTY.

This tract comprises 2640 acres, all level land and ready for the plow.

In this colony is the

Greatest Artesian Well in the
World,

And a perpetual water-right goes with the land bought. Tracts of 20 acres will be sold for \$500—only one-third cash; balance, one-third in two years, and one-third in three years, with ordinary interest.

Apply at once for best selection to

C. H. STREET & CO.,

(Successors to Immigration Association of California),

415 Montgomery St., San Francisco.

Farmers Should Look to their Interests in Buying AGRICULTURAL MACHINERY TO GET THE BEST!

The Adriance "BUCKEYE" Mowers

ARE THE GENUINE, and are, as they always have been,

THE BEST IN THE WORLD!

One that will Outwear two of any other make of Machine.

One that is very Simply Constructed and the Lightest Draft.

One that will do better work than any other Mower made.

Farmers should remember that the experiment of buying inferior machines is expensive, when they can buy the "ADRIANCE BUCKEYE," and be sure of getting the best machine in the market. See that ADRIANCE, PLATT & Co. is cast in the machine.

Send for our New Catalogue for 1888, giving full Descriptions and Revised Prices of all kinds of Harvesting Implements.

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land?
DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10-acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State. No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

OR RIVERSIDE, CAL.

"Bonanza" Hollingsworth Sulky Rake IMPROVED.

For either One or Two Horses,

Twenty Oil-Tempered Steel Teeth,

Works on the Roughest Lands,

No More Broken Teeth.

Wood or Steel Wheels.

Overhanging cleaner in place of the old style sticks. Axles made of steel. Wheels are very strong and tires are bolted to rim of wheel. The very best of lumber is used in the manufacture of these rakes. They are painted and varnished in first class style, and are strictly first-class in every way. WE PUT ON THIS RAKE OUR

PATENT COMBINED POLE and SHAFTS.

Hay Rakes made with these shafts can be used with either one horse or two horses. The cut at left shows it arranged as a pole, or for two horses; the cut at right shows it arranged as shafts, or for one horse. The same parts are used in both cases. The farmer at all times has all the parts with the rake, to make it either a one or two-horse. The change from one to two-horse can be made in a few minutes' time.

Farmers readily see the advantage of this over other rakes, and will buy only those made with Combined Pole and Shafts.

We have had built especially for Pacific trade a 24-tooth "Bonanza" Rake, which will rake two swaths cut by a 4-foot 6-inch or 5 foot Mower.

This is a very popular size and will pay many times over in a season for its small increased price.

BULL & GRANT FARM IMPLEMENT CO., Sole Importers

14 & 16 Main St., San Francisco. 211, 213 & 215 J St., Sacramento.

Our New Illustrated Catalogue mailed to all inquirers.

TIGER HAYING MACHINERY.

THE TIGER MOWER.

It has all the good points and none of the defects of the most perfect front-cut and rear-cut Mowers.

It has a number of most valuable improvements possessed by no other machine.

It will do the best of work in all kinds of cutting under the most trying circumstances.

It is the best in principle, best in construction, best in operation, best in durability and best in design and finish of any Mower in the market. Send for circulars.

THE HOLLINGSWORTH-TIGER RAKE

Is so called because it is a combination of the best and distinctive features which have made the "Hollingsworth" and "Tiger" Rakes the two most popular and successful hay rakes ever introduced.

It takes from the Hollingsworth its rocker frame and peculiar shaped tooth, with its spiral spring attachment and ready adjustability to every variety of work, and unites with it the iron revolving axle and dumping device of the world-renowned "Tiger."

THE TIGER RAKE

THE NEW HOLLINGSWORTH RAKE.

Belongs to that class which are termed "Self-operating" or "Horse-dump" Rakes.

The discharge is accomplished by simply pressing the foot upon a chain conveniently arranged for that purpose, and the teeth are thereby locked to the rotating axle, and, after being tilted and contents discharged by the movement of the horse, are automatically released and resume their work.

Any boy or girl that can drive a horse can rake with it as well as the strongest man, as the horse does all the hard work; and this is a very important feature, for it is a notorious fact that farm labor is always scarce and high in harvest time. Send for circulars.

The distinctive feature of the Hollingsworth Rake over all other styles of Horse Rakes that have ever been invented, is its peculiar shaped steel tooth and its ready adjustability to every variety of crop and surface. The tooth has a spiral spring attachment at its upper end, which relieves it from severe and sudden strains, and makes it especially adapted to rough work and uneven ground.

We have now to offer it with many new features and improvements as The New Hollingsworth, and these improvements will be quickly recognized and appreciated by all who are familiar with the old Hollingsworth.

FRUIT MARKETING.

What Shall Freight Rates Be?

The Sacramento *Bee* prints the following letter, recently addressed to C. P. Huntington by the New York agents of the California Fruit Union, which will prove of interest here, as indicating the efforts being made by this Union in the matter of fruit rates to New York:

Hon. C. P. Huntington, New York City—DEAR SIR: At your request we beg to submit our desires in reference to the freight on fruit from Sacramento to New York.

The present rates are as follows: Train of 10 cars to Chicago and five cars or more out of this train forward to New York, \$400 per car, but if less than five cars come the rate is then \$525 per car; and this latter rate we find is too high for the various fruits sent us from California. We therefore request that arrangements be made by which we shall be granted the \$400 rate from Sacramento to Jersey City without regard to the number of cars which shall come forward here from Chicago, whether one car or the entire ten cars out of a train. On a single car by passenger train from Sacramento to New York we ask for a \$500 rate.

We believe your arrangements are already made up to Chicago, and think you would only have to arrange matters this side of that city; at any rate, believing this to be so, we have interviewed Mr. Chandler of the Erie Express, and explained fully to him the situation. Mr. Chandler says he made a very low rate for this business by passenger train to Mr. Stubbs and is of the firm opinion that any further reduction in rate should be made by the lines west of Chicago. I am sure, however, from his conversation, that if it comes to a question of business or no business, his express line will stand its mileage proportion of the \$25, but he would not state this positively to us, as whatever arrangements he makes for this traffic he prefers should be made with Mr. Stubbs direct.

Last season we had 97 carloads between Boston, New York and Philadelphia, while this coming season, commencing early in May, we confidently hope to see 500 carloads come forward, and believe they will come provided you will grant our request as above, and when you come to look at this matter you will find that it is not very much that we ask. This \$400-rate, Sacramento to New York, we now have, provided five cars come, which we hope will regularly be the case through the solid part of the season; so our request simply covers the very early part of the season and the very late part of the season, and we are positive that your lines will all make much more money by granting this slight reduction than by refusing it. The crops in California are enormous this season, but cannot profitably be sold here on the \$525 rate except in occasional instances. Instead of sending forward 97 cars, you can make more money by having 500 sent, even at this slight reduction.

Thanking you for your promise to consult with Messrs. Crocker, Towne and Stubbs immediately on your arrival at San Francisco, and sincerely hoping that you will give this your favorable consideration, we remain, very respectfully yours,

SGOBEL & DAY.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 250 Market St., S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

WHAT CAME WITH A REMITTANCE.—"I have taken the RURAL PRESS, one way or another, ever since it was started, and it seems like an old friend. I consider it the best agricultural paper I ever saw, and always growing better. I hope it will continue in its good work."—J. R. M.

MARYSVILLE FAIR.—The directors of the 13th District Agricultural Association have fixed the date for the fair at Marysville this season for Aug. 27th to Sept. 2d.

Citrus Fair at Alhambra.

For the last two or three days in March, Alhambra—that pretty, thriving suburb of Los Angeles—was the scene of an "Industrial and Citrus Fair" which proved in every way successful.

The display was made in Pomeroy & Stimpson's new brick building, the lower hall being occupied mostly with fruit, vegetables and plants, while the industrial exhibits were gathered in the second story. A broad, canvas-covered corridor had been put up for the occasion around three sides of the building, and lined throughout with tropic palms and fragrant cedars.

Entering the main room, the visitor came upon a pyramid of the choicest Navel oranges, from G. B. Adams' orchard, planted in the Alhambra tract a dozen years ago. Upon this

representing an ancient Roman archway, used for a fruit and flower market, was much admired, and a Chinese pagoda, decked with trailing vines and many-hued blossoms, served as a bazaar of pretty things. Local artists were not backward in showing forth their skillful handiwork with brush and needle, and one old lady of 74 sent in a large and handsome afghan.

A grand march of nations, by 40 ladies and gentlemen in costume, and a concert, by Mrs. Catching Williams and assistants, made the evenings more entertaining. The attendance was large and enthusiastic, and the three days' receipts amounted to over \$1200.

Rates to Texas Raised.

A new special commodity tariff, making rates from California terminals to points in Texas on

Ladies' Toilette.

Broken-striped camel's hair suit. 1 velvet are here combined in the costume, and an elaborate effect is obtained by employing the velvet as a background for contrasting braids. The skirt is in the popular round walking style, and will hang gracefully over a large or small bustle. About its foot is a bias band of velvet a quarter of a yard deep, and upon this are arranged two rows of Kursheedt's standard president braid-passementerie of a cream shade.

The over-skirt is draped high at the sides so as to display the gores almost to the belt. It falls in pretty rounding outline and receives its graceful folds from plaits in its upper and side edges. The back-drapery falls in two deep, oval points low down on the breadth and is draped by plaits at the belt and a close gathering at its center. The edges of both front and back draperies are completed plainly.

The waist is an especially pleasing style. Its full outside back and front portions are adjusted upon a smoothly fitting lining that is shaped by double bust darts, side-back gores and a curving center seam. The outside portions are *neglige* in effect and have a cluster of lengthwise tucks at either side of the closing, and also at each side of the center of the back. The tucks extend about a third of the depth of the waist, and the fullness spreads gracefully between them and the gathers located at the lower edge. A belt confines the lower edge of the waist, and is in this instance concealed by a length of sash ribbon that is folded double and arranged in girdle style, the ends being fastened with spike-headed pins. The sleeves have the customary inside and outside seams, but their upper portions are a trifle wider than the usual coat shape. They are joined at their lower edges to velvet wristbands, the upper side being slightly gathered and the wristbands overlaid by passementerie. The pattern provides the shape for the high standing collar at the neck, but the rounding one below it is an ornamental addition. Both are overlaid by a band of passementerie, which curves gracefully in at the neck and follows the outlines of the collars.

Textures of all fashionable varieties, whether of cotton or wool, are appropriate for a toilette of this style. Batistes, linen lawns and foulards among the cotton goods are especially favored, and upon them embroideries or lace edgings may be added. A stylish costume intended for afternoon wear during the summer is of electric-blue sateen, with trimmings of garnet velvet overlaid by heavy, embroidered lace. A pretty wool costume is of cream-white serge. Its skirt is trimmed about the lower edge with a band of reddish-brown velvet upon which gold soutache embroidery has been effectively arranged, and the collar and wristbands are of velvet overlaid with the same glittering braid. Standard president braid-passementerie is obtainable in cream, black and a full line of choice, fashionable colors; the figures are detachable, and therefore may be arranged in single ornaments or in any outline desired.

The round hat has its brim faced with velvet and outlined by chenille galoon. Tips and velvet supply the crown trimming.

Awarded Gold Medals at the California State Fair, 1886 and 1887.

\$13,000 IN PRESENTS

TO BE GIVEN AWAY IN

100,000 Boxes of LE ROI DES SAVONS, THE KING OF SOAPS, During 1888.

During 1888 we will give a premium of \$25 to the person showing the best results from a bar of our Le Roi des Savons. Parties wishing to compete for this premium can obtain statements of regulations on application by letter.

LIST OF PRESENTS.

Total.....\$2,000 00
Cash presents will be forwarded March 1, 1888. No application will be received unless the senders state in writing the number of wrappers enclosed, and that the wrappers are from our King of Soaps bought for use in their own family. No wrappers received before Feb. 1st or later than Feb. 15, 1888. Write address plainly; also Post Office, County and State. All senders will be notified of the distribution of the first three lots of cash presents.

CAPITAL SOAP CO., Sacramento, Cal.

LADIES' COSTUME.

central table, and on others, which extended down each side of the long hall, the fine, clean citrus products of the fruitful San Gabriel valley were tastefully and liberally displayed.

The chief exhibits came from Alhambra, Duarte and San Gabriel. Of oranges, there were Washington and Australian Navel, Mediterranean Sweet, Paper-rind St. Michael, Konah, Malta Blood, Tangerine, and other varieties, among which the Valencia Lates—firm, thin-skinned, and of beautiful color—attracted special notice. There were Liebon, Eureka, and we know not what other varieties of lemon, besides choice canned fruits, marmalades and jellies.

To the rear of the central fruit-table were grouped potted plants from the Park nursery at Pasadena—a rare display of floral wealth and beauty.

Upstairs, in an ante-room, was a collection of curios from the South Seas, with a number of photographs from Aztec ruins in Central America and the villages of the Pueblo Indians—very interesting to antiquaries and ethnologists.

In the main hall on the upper floor were various booths containing industrial exhibits. One

the line of the Missouri Pacific and Texas & Pacific roads, has been issued by the Southern Pacific Company, and will take effect on the fifth prox. To Fort Worth, Denison and points east of Fort Worth, via Dallas to Mineola inclusive, the following rates have been made: Canned goods, carloads, \$1.40; pickled salmon, \$1.40; strained honey, \$1.40; hops, \$1.75; oranges, lemons and limes, \$1; vegetables, including potatoes, \$1.10. To points east of Mineola, via Marshall, Jefferson, to and including Texarkana, as well as to points east of Marshall to and including Shreveport, the rates will be as follows: Canned goods, pickled salmon or strained honey, \$1.50; hops, \$1.85; oranges, lemons and limes, \$1.10; vegetables, \$1.20. These rates are a material advance on those now in effect. A still greater advance is made to points to which the previously quoted interstate rates did not apply. To these points canned goods will take a carload rate of \$1.70; pickled salmon, \$1.45; strained honey, \$1.85; hops, \$2.22; oranges, lemons and limes, \$1.45; potatoes, \$1.11; vegetables, \$1.21. These rates are all much higher than those now in effect.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!**FERTILIZE!****NITROGENOUS SUPERPHOSPHATE.**

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,

DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. KOBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,

E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1/2 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or by

Booth's Sure Death Squirrel Poison

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 4, 1888.

The past week proved irregular and unsatisfactory so far as farm products are concerned. The few days' rains and the closing week of the Lenten season were taken hold of by buyers as an excuse for a bearing down in nearly all lines of produce, but Monday opened with a better feeling and more general trade. More rains are wanted by farmers to insure a good crop of grain and hay, but for fruits, vegetables, etc., the outlook is promising. The Eastern and European wheat markets have ruled fairly firm the past week. To-day's cable is as follows:

LIVERPOOL, April 4.—Wheat—Rather easier. California spot lots, 6s 4½d to 6s 7½d; off coast, 33s to 33s 3d; just shipped, 33s; nearly due, 33s; cargoes off coast, quiet but steady; on passage, slow; wheat on passage to Continent, 22s, 22s 000 qrs; wheat and flour on passage to U. K., 2,123,000 qrs; English country markets, quiet; French, steadier; wheat and flour in Paris, steady.

Foreign Review.

LONDON, April 2.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: The provincial markets quote a slight decline in English wheat. In London the market was steadier under smaller deliveries. Wheat continues to look well on days, and on light lands the loss of the plant is common. The prices of foreign wheat are in buyers' favor, without quotable decline. There were large supplies of foreign flour. Corn was dull and cheaper, excepting American, which was scarce and a fraction higher.

Weather and Crops.

WASHINGTON, April 1.—The following is a synopsis of the weather and crop bulletin for the week ended Saturday: Reports from Michigan, Ohio, Indiana, New Jersey, North Carolina, Kentucky and Tennessee indicate that the weather of the past week has been favorable, although the season is reported as late and farm work is retarded. Reports from South Carolina, Alabama, Mississippi, Louisiana, Missouri, Illinois, Nebraska and Kansas indicate that the weather of the week was generally unfavorable for growing crops, although favorable conditions are reported for the latter part of the week.

California Products in Chicago.

CHICAGO, March 31.—The market for California oranges is firm and higher. Receipts from the Pacific Coast this week have been light, but heavier consignments are expected next week. The following prices ruled to-day:

Quotations are: California River-side oranges, \$3.50@3.75; do. other kinds, \$3; do. Riverside Navel, \$5.75@6; do. other kinds, \$3.50@4; California lemons, \$1.50@1.75 per box.

At the recent quotations there is a moderate business in some lines of California dried fruits. Apricots are selling very weak, and unpeeled peaches are in fair request. These are the most favored descriptions. Plums and prunes are dull, and raisins are selling moderately.

We quote: Peaches, sun-dried, in sacks, 11¢@12¢; do. evaporated, unpeeled, in sacks, 13¢@15¢; in boxes, 14¢@16¢; do. peeled, in sacks, 17¢@22¢; do. in boxes, 18¢@25¢; apricots, sun-dried, 11¢; bleached prime do., 13¢; do. evaporated, in sacks, 14¢@17¢; plums, unpitted, 10¢@12¢; pitted, 10¢@11¢; prunes, according to size, 10¢@12¢; nectarines, according to quality, 10¢@14¢; raisins, loose Muscatels, 2-crown, \$1.35@1.45; do. 3-crown, \$1.50@1.65; do. London layers, \$2.25@2.35.

While exhibiting no material change in price, hops continue to rule quiet and rather slow. The inquiry is rather limited and it is confined to choice. Pacific Coast, choice, 12¢@13¢; Pacific Coast, common to prime, 9¢@12¢.

During the last few days rather more inquiry for California beans has existed, causing them to rule firmer. Foreign beans are quiet, and there are no domestic of consequence here. California, according to quality, \$2.15@2.75.

California cabbages have been all closed out, but a carload is expected in to-day.

Wool.

NEW YORK, April 3.—Wool maintains fair strength on the best grade of domestic. Low grades are uncertain and buyers are but few. Foreign wools have had a good share of trade for the week. The sales include the following: 2000 lbs. scoured California at 50¢; 20,000 lbs. Oregon at 20¢; 50,000 lbs. Territory, 18¢@22¢; 25,000 lbs. Texas, 15¢@17¢; 5000 lbs. scoured Texas, 47¢@50¢; 10,000 lbs. quarter blood combing, 85¢@90¢; 10,000 lbs. fine Delaine, 33¢@35¢; 10,000 lbs. X and XX, 32¢.

The Philadelphia market is quiet, with sales of 600,000 pounds.

Eastern Grain Markets.

CHICAGO, April 4.—Wheat—Lower; cash, 71¢; May, 75¢. Corn, lower; cash, 47¢; May, 51¢ 13-16¢; June, 50¢. Oats, easy; May, 30¢.

NEW YORK, April 4.—Wheat—90¢@91¢ for cash, 89¢ for April, 89½¢@89¾¢ for May, 87½¢@87¾¢ for June and 86½¢ for July.

Miscellaneous.

NEW YORK, April 3.—Hops are in better shape than for a long period. Exportation has helped the market, and the best State and choice Pacifics were firm. New State is quoted at from 8¢@14¢ for common to choice; new Pacific, 8¢@10¢; German and other grades, quiet. Raisins are firmly quoted at \$1.40@1.55 for 2-crown, \$1.75@1.95 for 3-crown, with sales of 1000 boxes of Lion at extreme prices. Chicago is said to be quite drained. There is not much prompt sale for hides, but inquiry and tone maintain full rates for all desirable lots. California dried fruits well out of first hands. Lima beans are quoted at \$2.75. Bear skins from the Pacific, \$7@12. Beaver—Northern Pacific, \$4.50@5.50; Southern Pacific, \$3.50@4; other, \$5@7.

Local Markets.

BAGS—The market is more quiet, with in some quarters a disposition to shade prices, owing to the want of rains in several large wheat and barley growing sections. For June-July delivery the market is quoted at 8½¢ to 8¾¢, with some sales reported a shade lower.

BARLEY—The past week was virtually a repetition of the preceding one. The demand continues good for the actual grain, but the bears, by cross-orders chiefly on Call, have unsettled values to such an extent that large dealers are afraid to carry much stock, even at the present low prices. Unless we have heavy rains soon, the crops in several sections will begin to suffer. On Call, the reported transactions were of fair volume and only small fluctuations. At to-day's Call, the sales reported are as follows:

Morning Session: Buyer season—100 tons, 77½¢; 300, 77½¢; 400, 77½¢; 200, 77½¢; 100, 77½¢. Buyer 1888—100 tons, 86½¢; 500, 86½¢. Afternoon Session: Spot, season's storage paid—100 tons, 75¢; 200, 75¢. May—300 tons, 75½¢; 200, 75½¢. Buyer season—500 tons, 77½¢; 200, 77½¢; 300, 77½¢; 500, 77½¢. Buyer 1888—200 tons, 80½¢; 500, 80½¢; 600, 80½¢ per ctl.

BUTTER—The market cleans up daily, causing a strong market to obtain with a slight advance in quotations. The call is so large that although receipts are free, still dealers are unable to pack, and it now looks as if packed butter the coming fall and winter will be scarce.

CHEESE—Free receipts and only a fair demand have caused prices to shade off still more, with a weak market at the close.

EGGS—The market exhibits a weak and easier tone, under a light demand and increasing receipts.

FLOUR—The market is steady, with an improving call reported.

WHEAT—The local market ruled dull throughout the week, which was taken advantage of by the bears on Call to break options so as to get more cash or spot wheat. Choice grades of wheat are scarce and hard to get, even by advancing bids. The market is of a deadlock character—to force sales, lower prices must be submitted to; to buy, higher prices must be paid. At to-day's Call, the transactions reported are as follows:

Morning Session: Buyer season—200 tons, \$1.31; 500, \$1.30; 600, \$1.30. Buyer 1888—200 tons, \$1.35; 500, \$1.35. Afternoon Session: Buyer season—900 tons, \$1.30. Buyer 1888—500 tons, \$1.35; 400, \$1.35; 200, \$1.35 per ctl.

[COMMUNICATED.]

Market Information.

Cereals.

H. Kains Jackson writes to the *London Farmer* as follows: Compared with a year ago, English wheat ranges from 28s to 36s, against 30s to 38s per qr. This is a reduction is not, however, the full measure of loss to growers whose wheat is of higher average quality than last year, and should accordingly command a higher price. American wheat is also about as cheaper, red American making 35s, against 37s a year ago, Californian about the same. Australian, owing to the better crop, is quite 3s lower, 35s against 38s per qr. Indian wheat is not of much consequence so far as remains of the old crop go, but the new crop is offered at 28s to 34s and this fixes, as it were, a low level of value for the summer. Argentine and Chilean wheat are offered at 32s and 33s per qr., and are cheap at the money. The prices of Russian wheat are largely governed by expectations of the grain to be forwarded in the months of May and June by sea, and even earlier by rail if the monopolization of the railways by troops in Russia would only cease. The serious state of politics in southeast Europe, where a Russo-Turkish conspiracy against the smaller independent States is feared, has drawn public attention to the small granary reserves of the United Kingdom which, in case of a war in which any big naval power, like France, was opposed to us, would immediately constitute a national danger. The London Chamber of Commerce accordingly have arranged for a special meeting next Wednesday, when the grain-supply of England in time of war will be thoroughly discussed. If such a discussion should lead to larger stocks being kept than at present, the English farmer would probably be advantaged. Certain it is that the present manner in which millers buy simply from hand to mouth is seriously opposed to the interests of growers, as of importers of grain. The state of the American wheat and flour trade is also attracting attention. The wholesale market has been exceedingly discouraged. The visible supply of wheat is singularly small, and the weekly exports of wheat are quite moderate, yet business at New York, Philadelphia and Baltimore is, for the most part, despite occasional ripples of excitement, flat and depressed. Yet bread in New York is dearer than in London, and the tariffs of the railways are said to be dearer from Dakota to New York than from Dakota to Liverpool. At a meeting of the New York Produce Exchange, held at the end of February, it was officially declared that the rate to New York on grain produce from Chicago was 1s 4½d per ctl, whereas the through rate from New York to Liverpool was only 1s 5d per ctl, and that, bad as this was, the forward contract prices were still more outrageous, namely, 1s 1d from Chicago to New York, and 1s from Chicago to Liverpool. If these figures be true, the American is taxing himself rather heavily in order to supply the English, French and Italian consumer with cheaper bread than he, the American, can himself procure. This state of things can hardly be of an indefinite continuance, and some promise may also come to the English wheat farmer through a certain improvement discernible in the flour trade. It is an open secret that the Jubilee year was the worst ever known in the milling machinery trade, and, indeed, in the milling trade generally, for the number of mills closed at Birmingham, Glasgow and Dublin was absolutely disastrous, and, in fact, all parts of the kingdom suffered. Since 1886 came in, however, there has been a decided increase in the demand for milling machinery, and now we hear that several contracts have lately been signed for the erection of complete roller plants. Our technical contemporary, the *Miller*, has exclusive information as to the points where such erections are to take place, and from its comments we infer that this renewed activity is taking place in those very parts where the depressing

influence of American competition was most severely felt in 1886 and in 1887.

Late Australian advices report that the wheat crop did not turn out as well as had been estimated the forepart of harvest, the quantity available for export being fully one-third less than previously claimed.

Oregon crop advices are essentially unchanged, although some advices report the outlook not so flattering as at this time last year.

In this State advices coming in are far from encouraging, while the general tenor of advices report the wheat plant looking exceedingly well, but the moisture in the ground ranges only from 8 to 18 inches, which is far from enough to carry the plant through this month, and with drying winds or hot weather, the moisture will soon be drained out in the fields, having a depth of not over ten inches. What is now wanted above all, are good-soaking well-distributed rains throughout the State. The rains of last week were not general, many counties not having a drop to fall, while in those in which the rains did fall, they were not of heavy or long continuance to do a great deal of good.

The wheat market ruled dull throughout the past week. The demand was of a slow irregular character, but then holders did not exhibit any anxiety and press the market. Some parcels upon which money was loaned, are said to have been sold, and naturally buyers dictated prices. The quantity in the State is small for the time of year, and even this is mostly poor to fair grades, very little being good to choice. Considerable of that at Port Costa and in this city is held against Call Board sales. Millers continue to claim that there is a great scarcity of choice gilt-edged milling, and consequently much has to be brought from Oregon, known as Valley wheat.

There was shipped from here in last month to Europe 41,966 tons of wheat and 41,500 bbls. flour. With latter reduced to wheat, the aggregate would be 53,141 tons.

A. J. Gove, Official Inspector of the Call Board, reports the following stocks of grain on hand, in tons, in Call Board and City warehouses April 1, 1888:

IN CITY WAREHOUSES.

	Wheat.	Barley.	Oats.	Corn.	Bran.
July 1, '87	39,207	13,915	1,403	885	100

Decrease in March	69,190	21,190
In all C. B. Warehouses	90,380	15,694

By the above it will be seen that the receipts of barley for the eight months of the present season aggregate nearly as much as they did the entire season of 1886-87, when the stock in the city on July 1, 1887, was only 13,915. It now looks as if the stock that will remain on hand on July 1 of this year will be less than at the like time last year. Adding the barley receipts, 65,616 tons, in last month, to the stock 29,720 tons, held on March 1, and taking from the amount the stock, 25,656 tons, on April 1, and it will be seen that the consumption in this city and exports hence aggregated last month 10,680 tons.

Barley is hard to report correctly, owing to so many bear influences at work. A poor gale of barley is sold and quoted to the papers as No. 1 feed, evidently to keep prices down, if for no other purpose. It is well known that choice grades are scarce and firmly held with large holders not offering to sell. Owing to the cross orders on Call being in the bears' favor, many parcels on which money was borrowed have been sacrificed. The consumption in the State is very large, while the stock is now conceded by the better informed not to be as large as at this time last year, with four months' feeding to run on before the new crop. Last year we received heavy supplies of oats from Kansas and Nebraska, but this year none will come, and consequently more barley will be used up to next season.

Oats are weak and easier for poor to fair grades under heavy supplies, but choice grades are in light supply and firmly held. Oregon advices report the market firmer.

In corn, trading the past week continued fair with some fluctuations reported. Choice corn is hard to get and commands full figures.

Rye is weak and a shade lower under freer receipts of Eastern and only a moderate inquiry.

Feedstuff.

In ground feed there are no changes to report. While the output of bran and middlings by the California flour-mills is small, yet free receipts from Oregon keep the market weak. Ground barley continues to find good custom. The tone of the market at the close is firm.

In hay the call continues good. Heavy teaming and a large increase in the number of work-horses cause a larger consumption. The market is lightly supplied with choice, that selling is chiefly coarse. Alfalfa hay is slow. The crop prospects are not any too good, but then it is claimed that unless heavy rains come soon, many fields of grain will be cut for hay.

Vegetables.

Garden truck is coming in more freely, with the varieties increasing. Prices are shading off causing

a better demand to obtain. It now looks as if the supply of all kinds will be unusually heavy, but then the consumption is larger.

Asparagus, rhubarb and peas are shading off from day to day under better supplies. Tomatoes and cucumbers come in sparingly, but then the high prices restrict consumption.

Oregon is sending large quantities of onions to the East. In one day three carloads went to distributive points west of the Missouri river. The local onion market is without change. The demand is in a small way, but as receipts are light, prices are well maintained.

New potatoes are increasing in quantity, quality and size. Fresh receipts are given the preference by buyers, and to sell those two or more days old, concessions are necessary. It is claimed that shipments to the East will soon be inaugurated. In old potatoes the market is slow, with only the more choice finding ready buyers at anything like satisfactory prices.

Owing to the backward season at the East, California cabbages are still freely shipped to Chicago and other large centers.

Fruits.

The first consignment of strawberries this year was received March 29th, from Menlo Park. It consists of six drawers of the fruit which were sold for \$45, or at the rate of \$7.50 per drawer. The crop this year is backward, but it promises to be larger, if anything, than last year, notwithstanding the severe winter through which we passed.

Advices of the fruit crop are conflicting, but the general tenor is that it will be considerably larger than last year, taking all varieties as a whole, owing to the large number of orchards that come into bearing this year. The late rains in some places are said to have done some injury to the blossoms, but not to any serious extent.

Oranges came in more freely the past week, with the larger proportion poor, and naturally they had to be sold at a lower range of values. Choice, good-keeping oranges are readily sold, and at good prices, too. The same remarks apply to limes and lemons.

Bright sun-dried fruits are scarce and wanted, but off-color are in good supply, but still these will be marketed before the new season sets in. Apples are getting scarce, and gradually creeping up in prices. The supply of plums is also growing less. There is a good demand for carload lots, but generally assorted, from the Territorial trade and also from the East.

Raisins continue to gain in strength under a steadily increasing call and depressing stocks. Choice loose Muscatels are, like London layers, very scarce.

Live-Stock.

Bullocks are offering more freely, as are mutton sheep, and as the supply of vegetables is increasing, the demand is decreasing, although those who lived on fish for several weeks past are now large eaters of meat, which causes more buying by dealers. The condition of the bullocks and sheep is good. Veals and spring lambs are only in fair supply. Hard grain-fed hogs are wanted for the block, Chinamen being the principal consumers, as the prices are against packers. In milch cows, there is nothing new to report. Last week's quotations cover this week's prices. For horses, there appears to be more inquiry, but at prices quoted two weeks ago.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6¢@6½¢ per lb.; dressed 9¢@10¢ per lb.; soft, 5¢@6¢ per lb.; dressed, 7¢@8¢ per lb. Stock hogs, 3¢@5¢ per lb.

BEEF—Stall-fed, 8¢@8½¢ per lb.; grass-fed, extra, 7½¢@8¢ per lb.; first quality, 7¢ — per lb.; second quality, 6½¢ — per lb.; third quality, 5¢@6¢ per lb.

VEAL—Choice, 10¢@12¢ per lb.; fair to good, 8¢@9¢ per lb.

MUTTON—Lambs, 8¢@8½¢ per lb.; ewes, 7½¢@8¢ per lb.; lamb-spring, 12¢@13¢ per lb.

Miscellaneous.

Poultry ruled fairly steady throughout the past week. Prices for the season are high, but then the consumption is larger and receipts are no larger.

Game is going out, and hardly deserving of quotation.

Choice beans are scarce, but fair to good are in good supply, but not more so than at this season of the year. The East reports an improving market.

In hops, there is absolutely nothing new to report. The effects of the heavy failures abroad which caused a further decline at the East and in Europe, are wearing off, and an improving demand and advancing prices for the better grades are reported.

In wools, there is nothing doing. Eastern advices report a strong market for medium to fine, clean well-conditioned and lively wools, owing to light supplies to draw from, and manufacturers carrying light stocks. It is thought that a higher range of values will obtain for the better grades when the new clip comes on the market. Receipts now are light and only straggling clips.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way	381,446	206,916
In port, disengaged	52,108	102,089
In port, engaged	17,605	16,820

Totals, 451,159 325,825
To obtain the carrying capacity, add 60 per cent to the tonnage.

Tonnage on the way to Oregon, 22,835; tonnage at Portland, Oregon, loading and to load, 19,572. Total tonnage, 42,407.

San Francisco, April 4, 1888.

Unshiu or Satsuma.

We have seen a letter from H. E. Van Deman, U. S. Pomologist, to H. E. Amore of this city, concerning the identity of the Unshiu and the Satsuma oranges. Mr. Van Deman writes: I tested in San Francisco, in February, the Unshiu oranges, which had been brought from Japan, and gathered specimens from the trees at Riverside, Cal., the same week. When I returned here a few days ago I found specimens sent me from Japan, and all the above were one and the same variety. Then I have years ago tasted Satsuma oranges from Florida and did so last year and also this week. After carefully examining all these specimens and the trees, I pronounce the Satsuma and Unshiu identical. It is hardy and a good bearer and worthy of propagation. I am glad to know that you are selling so many trees of it. Your spelling of the name "Onshiu" is equally correct and may be better understood than "Unshiu." But the name Satsuma seems to have been attached to it in 1874. The matter of the name which should predominate is one of much importance and may be hard to determine. Your having sold so many thousands of trees under the name "Onshiu," and its being called by that name in Japan, to some extent, are arguments in favor of its retention. But the priority of "Satsuma" would seem to give it the preference. However, this question is of far less importance than the identity of the variety now propagated under the above names. In your circular I notice that you have marked out the words "not one seed in a thousand." I have seen well developed seeds in an occasional specimen, but the variety is practically seedless. When in California lately, I missed seeing you and many others whom I desired to see and converse with on Japanese fruits. Please let me hear from you at any time. Yours respectfully,

H. E. VAN DEMAN,
Pomologist.

D. M. Osborne & Co.

We have just received the 32d Annual Catalogue of D. M. Osborne & Co. It is both comprehensive and tasteful, containing a vast amount of information practically useful to the farmer, not only describing the construction and working qualities of their make of mowers and self-binding harvesters, but also hints and instructions regarding the proper care and management of harvesting machines generally, whether of their own or other's manufacture. The office and warehouse of the company is on Bluxome street near Fifth street. Their huge warehouse is already filled and running over, so that they have been forced to lease additional storage for their machines. They have engaged all the twine that Tubbs & Co. can turn out between now and July. Mr. Goddard, the local agent, will answer any inquiries made regarding their machines, quote prices, etc.

HEREFORDS IN SANTA BARBARA COUNTY.—We have recently heard from the Hereford cattle sold by Vaughan & Williams to C. F. Swan. Mr. Swan reports them as in a thriving condition, and that they take kindly to our California climate. He has them on the El Roblas rancho, Los Alamos, Cal. The growing demand for his young stock will warrant Mr. S. in believing that the Hereford is to become a favorite with our stock-raisers.

LAND & WATER FREE!
800 Acres Rich, Level Land.

To some one who will summer fallow and cultivate well, will be furnished free water and use of 160 acres of good land (S. E. Sec. 13, T. 21, R. 23) within 9 miles of Tulare, B. W. Forty acres formerly plowed. Land on all sides cultivated and pastured. Water for irrigation (if needed) free. Also (without water) 640 acres (Section 13, T. 23, R. 24), four miles westerly of Tipton and S. P. R. R., all in Tulare County and the Artesian belt. For particulars call on E. M. DEWEY, 7 miles S. W. of Tulare, or A. T. DEWEY, 220 Market St., San Francisco.

This paper is printed with Ink Manufactured by Charles Eneu Johnson & Co., 500 South 10th St., Philadelphia. Branch Offices—47 Rose St., New York, and 40 La Salle St., Chicago. Agent for the Pacific Coast—Joseph H. Dorsety 529 Commercial St., S. F.

Dewey & Co.'s Scientific Press Patent Agency (ESTABLISHED 1860)

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 220 Market St., S.F.

The Nursery Business.

The business of tree propagation, as might be inferred from the fact that orchards and vineyards are multiplying with such rapidity, is one of the most important lines of our horticultural industry. It has had its ups and downs, as have most productive efforts in this State, and, in fact, anywhere. The oscillations are, however, more sudden and marked in California than elsewhere, because horticultural fevers and fashions here surge higher and fall lower than in older countries. When the tree-planting fever runs high, nurserymen multiply; you can hardly fire off a gun anywhere without hitting one. When the fruit prices have been low for a time you might hunt all day for one—unless you should hunt in the advertising columns of the RURAL PRESS, and there you will always find the most enterprising of them. Growing nursery stock is very much like growing hops, except that surplus fruit trees are of no earthly account—you can't even make home-made beer out of them. As with nursery stock, however, as with hops, those who operate the business intelligently and enterprisingly and stay with it through thick and thin become well-to-do and are generally well esteemed in the community—except now and then when an order for winter apple trees is filled with cherry plums. Such incidents sometimes lead orchard-planters to think nurserymen are not honest.

One of the chief requirements of success in the nursery business is foresight. It is a business in which hind sight is remarkably clear. We doubt if a nurseryman who burned up French prunes in 1886, because he could not get \$6 per hundred for them, ever forgot how they looked while he was trying to scrape up enough to fill orders at \$25 per hundred in 1887. To be able to foresee how fruit prices are going to run a year ahead, to judge whether orders for canned and dried fruit are going to be half as large or twice as large as the supply, to be mind-reader enough to tell a year ahead what especial fruits the newspapers are going to boom, and how many orchard-planters will be brought into the State at cut rates—all these delicate problems enter into the every day thought of the nurseryman, and no wonder his forehead gets higher every year in the effort to master them. These things enter more or less into tree propagation everywhere, but are of sharpest moment in California, where every planter wants yearling trees and where trees grow so fast that if the nurseryman leaves the stock in the ground two years he has to establish a logging camp and sawmill to work up the two-year-olds into furniture or fence boards. And yet, with all such hardships, the nursery business in California to those who stay by it, and deal conscientiously, is a good one, and probably always will be so.

In view of the fact that there has been such

a draft upon tree stock during the last planting season, and the future is so promising, we have thought it fitting to give an engraving which includes views taken on the grounds of the California Nursery Company at Niles. This is the largest nursery establishment in California,

from a visit, which will require the effort to any interested horticulturist.

EXHIBITS FOR THE MECHANICS' FAIR.—Intending exhibitors at the coming fair of the Mechanics' Institute in this city will be interest-

The Experiment Stations.

Work at the Amador Culture Station of the University is progressing rapidly, a large force being engaged in clearing. A surveying party of young men from the University, under the direction of W. G. Raymond, instructor in surveying, are now at work preparing a topographical survey and map which will be used in laying off the grounds. The Amador Ledger of Saturday last stated that the Canvassing Committee had reported additional subscriptions to the extent of nearly \$500, which will bring the total up to something like \$3000, and remarks that this amount will probably be further increased somewhat. This increase will, of course, be desirable, as it will secure better buildings. Prof. Hilgard's estimated requirement of \$2000 was, of course, a minimum, and any further sum will both promote the work and make the station more creditable to the locality and generally.

The same disposition to secure rather more than the minimum amount is reported from Tulare county, where a meeting was also held on Saturday last, under the auspices of Tulare Grange. Several offers of land were placed at the disposal of the Grange from which Prof. Hilgard can make selection, and a sum of money not to fall below \$3000 was pledged.

Several offers of land and buildings in Southern California have been made by individual and corporate enterprise. It still remains to reach decision as to which will represent the largest area or otherwise best serve the public interest.

Prof. Hilgard has gone this week to Paso Robles to definitely decide upon the station which has been provided for in that district. As early as possible next week he expects to go south, stopping first to arrange the Tulare station, and then, if possible continuing into Southern California to examine the locations offered.

Work on the central station in Berkeley is progressing, the foundations now being put in. This increased space is greatly needed, for the work is constantly extending, and with the provision for outlying stations and the larger parish of interested correspondents to be ministered to, the improved facilities will be very welcome to Prof. Hilgard and his staff of assistants. Correspondence and publications received at Berkeley indicate that the organization of Experiment Stations in other States is going forward energetically.

CHICO FORESTRY STATION.—H. Rowland Lee, Head Forester for the State Board, returned to this city on Tuesday from the experimental tree-planting station near Chico. He reports that the work of improving the tract recently donated by Gen. Bidwell is progressing rapidly, 35 acres having been plowed and harrowed, and a great number of eucalyptus, catalpa, pines and walnuts planted.

VIEWS ON THE GROUNDS OF THE CALIFORNIA NURSERY COMPANY.

and its grounds are eligibly situated near Niles, in the lower part of Alameda county, close to the track of the Central Pacific railway, which is seen crossing the foreground of one of the pictures. We need not describe the establishment in detail, for most of our readers know it from previous notices. Suffice it to say that the nursery covers something like 500 acres of excellent land and that the participants in the enterprise are the old and well-known names, John Rock, R. D. Fox, James Hutchison and Thomas Meherin. The engravings give an idea of the force of men they employ and some intimation of the general features of the establishment, more of which can be learned

in the announcement which was made at the last meeting of the directors. The San Francisco & North Pacific Railroad Company, the North Pacific Coast railroad and the Pacific Coast Steamship Company will transport exhibits free of charge; and the Southern Pacific Company will transport all perishable articles free, and will transport back all non-perishable articles, together with the stands and show-cases in which they were exhibited.

At Woodland the foundation for the woolen-mill is built, a new ice factory is under way, work on the street railway is begun, and a fruit cannery company is being formed.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Tulare Notes.

EDITORS PRESS:—The planting season just closed has witnessed the putting out of a larger acreage to fruit trees and grapevines in Lucerne than any five previous years have done. The vines planted are almost wholly of the Muscat of Alexandria variety, while the fruit trees which have found most favor are several standard varieties of the apricot, peach and prune. Pears and apples have found less favor with planters this season on account of fears entertained of losses from the codlin moth and woolly aphis.

Spraying with sulphur, lime and salt has proven quite effective in eradicating the scale in this county. I think the reason this wash has sometimes failed to give satisfaction is because of a failure to make it strong enough and neglect in spraying the trees thoroughly upon all sides. Care should also be taken to apply the wash warm, but not too hot, as it takes hold better than when cold.

This has been a good year for our nurserymen, most of them having succeeded in disposing of almost their entire stock. Among our most enterprising ones are Thorne and Douglass, who began business at Grangeville ten years ago, and who have by industry and square dealing built up a business that is a credit to the county as well as to themselves. They make it a rule, so far as possible, to be able to supply all customers, and have this year shipped many thousand trees and vines to Fresno county for planting. There are other nurserymen here who deserve especial mention, but space will not permit at this time.

The prospect for good wheat crops in Lucerne this season is favorable; but there is quite a contrast in the appearance of our valley as it now is and as it was ten years ago.

Then it was one vast uninterrupted wheat-field for miles on miles, with scarcely a panel of fence visible anywhere, while farm-houses were indeed few and far between. Now we have many well appointed cottages with flower-gardens in front, and surrounded with large orchards and vineyards, facing upon well-graded highways. Large fields of horses in which every grade and breed, from the Norman to the thoroughbred, is represented.

There are fields of cattle in which the Short-horns, Holsteins, Devons and Jerseys all find a place; and in sheep and hogs if we do not lead we certainly are not behind. But in the latter I rather think we do lead any place in the State of our acres.

To give some idea of what is being done here in the business of stock-raising, in the production of good, common grades for all purposes, I give a record of sales from one farm for the year just past as a sample.

Output of a Tulare Farm.

In 1884 A. L. Cressy of Modesto bought 400 acres of land all lying within three miles of Hanford, and placed it under the management of C. H. Howard, an experienced farmer recently from Maine.

There are now upon the ranch 275 head of cattle, which includes cows and young cattle; 60 head of brood mares, all of which are expected to foal this spring; also 80 head of colts and mules one and two years old. One hundred head of cattle were sold one month ago, bringing a little over \$4000; 60 head of calves were sold during the winter, netting \$800.

There have been sold within a year horses aggregating in value \$3700. Four of these brought \$1380, without any special trouble in breaking or training. There were also sold last fall hogs amounting in value to \$600.

Six hundred tons of alfalfa hay were cut and stacked during the year, 300 tons of which have been fed out, the remaining 300 tons being still on hand, which may be sold or kept over until another winter, as thought desirable.

The stock is turned off the fields that are cut to hay about April 1st, from which time until September 1st three crops of alfalfa hay are gathered, averaging in the aggregate about five tons to the acre. These fields then furnish green pastures for the ensuing seven months, when it is again time to clear them of stock, preparatory to the gathering of other hay crops.

No lumber is required in Lucerne to protect hay from the storms of winter, which may seem incredible to our brother farmers North and East, yet such is the fact, nevertheless.

Storing Hay.

Hay when hauled from the fields is placed in long but rather narrow stacks, built pretty high by the aid of derrick; and then covered with wheat straw to the depth of about one foot.

I believe this method of protecting hay from rain is practiced to some extent throughout the State, but not so effectively as here, from the fact that our annual rainfall is probably much less than that of any other part of the United States; this State in particular.

These haystacks become well settled by winter, when the stock is turned into them to feed at pleasure. This may seem like waste, but it is quite to the contrary. For not only is the expense of handling saved, but less hay is wasted than when feeding from a manger; as it requires some effort for a horse or cow to pull out a wisp of hay from the well-settled stack,

they are usually willing to eat it up clean before trying for more.

A New Railway.

The productions of our valley are rapidly increasing in value and in bulk from year to year, and the necessity of a competing line of railroad has long been felt by our people. For more than a decade we have been at the mercy of a monopoly, whose infamies practiced upon a long-suffering and helpless people have cast a blot upon the fair fame of our State and nation, which it will take years to eradicate. But it seems that the long-hoped-for competing line of railroad is to become a reality, and will be here in time to carry our summer's produce to the Bay City, the market of the West. Our people are much elated over the prospect, and an era of prosperity such as Lucerne has never before experienced is looked for in the near future.

Hanford.

A. F. JEWETT.

Notes on Kern County.

EDITORS PRESS:—As yet but little has been done to develop our fruit resources—enough, however, to demonstrate the fact that we have all the conditions requisite to the success and profit of this growing industry. Well-boring shows us that the soil is 30 or 40 feet in depth, and has been deposited by the action of water. A few enterprising people have been experimenting with nearly all the various kinds of fruits and the results are most happily successful.

Upon land tributary to the Kern river, which is one of the largest in this valley, are lands which will produce the finest of grapes, either for wine or raisins. We only wait the turn of the wheel of progress which shall bring us capital and men to improve these advantages which Dame Nature has arranged here with lavish hand.

Much enterprise and capital has been exhibited and expended in the various branches of stock-raising, but it has been conducted by parties who own large holdings, and who deserve much credit for the systematic and successful methods employed. The thing we are praying for is people who will come and buy a few acres of the thousands that are in the hands of individuals who will sell, and cultivate the same. We need men who are willing to work, and we assure them the pay will be amply remunerative. Stirring the soil in any line of thorough cultivation insures success.

Kern county is one of the neglected portions of the State. The tide has begun to set this way. Eastern buyers who have learned that the whole of the State of California does not lie south of the Mojave desert and that there are lands for sale at living prices, with a whole bundle of the finest kind of climate thrown in, are stopping off here and taking a look.

The Sabbath recreation of killing jack-rabbits seems to have given way, as the pressure of spring work is at hand. All are encouraged by the flattering prospects of future crops, which the good Lord seems pleased to dispense to the Sabbath-breakers as well as the balance of humanity.

Thus far rains have been rather light, yet crops are starting finely, and those who have good ditch facilities need have no fear, as yonder mountains are white with snow, which old Sol will manufacture into broth later. Snow in the East is sometimes called the "poor man's manure." As we at present have no call for fertilizer, it makes the finest kind of a cooling drink for the thirsty earth when the other sources of supply fail.

W.

Bakersfield, April 10th.

THE GARDEN.

Killing Moles, Etc.

EDITORS PRESS:—A correspondent inquires how to kill moles. He should first ask himself the question whether it is right to kill them, and whether he will not injure himself more by killing the moles than they can possibly injure him. When he has fully investigated the subject and has found proof that the moles are positively injurious in some way to his crops, that they positively do him more harm than good, then, and not until then, should he seek to destroy them. He should be careful that he makes no mistakes in his conclusions, for it is my judgment that he will find in the common garden or field mole one of the very best friends on his place.

The mole is strictly insectivorous or carnivorous in its food habits. It cannot be forced to eat any vegetable food whatever; it will starve first. In its natural wild state its food is insects, and them only. Its general or most common food is the well known angle-worm, which is, it is true, neutral or beneficial life, but it also feeds ravenously on the larvae of some of the most noxious injurious insects, particularly on what are known as wire-worms, the larvae of many very injurious caterpillars, etc., but, so far as known, it destroys none of the beneficial insects. Then why does "Old Subscriber" wish to kill this most useful rodent? We hope that he is not cursed with that desire so common among mankind, and so disgraceful to his proper human feelings, to destroy on sight every

life possible that is not domestic, such as harmless snakes, lizards, toads, frogs, skunks, birds, nearly every one of which are our very best friends; and, again, some of our very best insect friends are munched and killed without mercy or reason, without which, without their help every year, our crops might be totally destroyed.

No, we do not think this correspondent wishes to kill the moles for any such abominable reason. He thinks the mole is doing him great harm, therefore should die. Perhaps they are doing some harm, but a dead mole is worthless for destroying either neutral or noxious insects. He says of the moles: "They are giving me great trouble," but we are in the dark as to kind of trouble. I lived for many years in Illinois on a rich, sandy loam, where moles were very plenty, and grew every kind of crop that could be grown in that climate. They sometimes gave me trouble and caused me considerable damage, but bless you, I did not kill them; I simply managed them, and made them work for my good rather than to my detriment.

Moles do damage in two ways: 1. By burrowing under the sod of lawns, breaking up the roots and throwing up the grass so that it is killed by drouth. Usually when this is the case, some life is feeding on the roots of the grass, which, if not eaten by the moles, would eventually harm it much more than the moles and in the end might completely destroy it. Therefore the more the moles persist in burrowing the more grass enemies there are there to be eaten. The remedy in such cases is to roll the lawn early each morning with a heavy roller; this will replant the disturbed grass and allow the moles to finish the worms. When they accomplish this they will leave instantly, for the mole is an animal of immense muscular development and necessarily a ravenous feeder to support it, and must have plenty to eat. No known animal will perish more quickly from want of food than the mole.

Moles do injury by burrowing under young plants and in that way destroying them. This habit is often very troublesome in the spring of the year. In this way a mole will follow a row of corn or other young plants across a field and destroy every plant. He is not after the young corn or other plants, nor their seed, but the "fish wurrums" and other larvae and insects that have either found their way into the loose soil of the furrow to burrow in, or are there for the destruction of the seed or the young plants. The remedy in this case is to at once cultivate the plants with the plow, in that way making a still fresher furrow for the moles to hunt in. For I am confident in such cases the angle-worms seek the freshest, loosest ground in which to burrow, and it is usually them that the moles are feeding on.

In the light of these facts should the moles be destroyed? They are not an animal that can increase so greatly in any country as to become a very great nuisance. Their food is limited, and they must have a full and continuous supply of it or starve, therefore they can only be plenty where angle-worms and the larvae of very injurious insects are plenty. If these last were not destroyed by the moles, where would we be? This is really a very serious question.

Mole Traps.

In the rich, loose soils in Illinois, where I lived over half a century, I think the moles were as plenty as they could be anywhere. During that long period I followed all the vocations of rural life, and I and the moles never had one serious quarrel. But others have quarreled with them seriously and have invented many traps for their destruction. The best one for this purpose can be found at any first-class seedstore East, and I suppose can be here. It is founded on the well known habit of the mole in first making a burrow, catching what he finds as he forms it, and then after a time returning through the same burrow to catch the insects that have fallen into it, and the angle-worms that have sought the burrow for the fresh loosened earth. The trap is formed of two sharp points that are forced into the ground and through the mole by a strong spring, which is set by pressing the soil with the foot firmly down into the burrow, then placing the tongue of the trap on this depressed place, so that when the mole is passing beneath he will throw up the tongue or trigger, which frees the spring, which plunges the sharp points into him.

Food of the Mole.

The most general food of the mole is the angle-worm. The angle-worm has no injurious habits to us whatever. The little effect it has on man's economy is beneficial—so much so that the great Darwin wrote a book setting forth what great good it had done the world by working over and deepening the soil.

The next most general food of the mole is the very destructive larvae known as wire worms, the larvae of the curious spring or snapping beetles. These wire worms feed ravenously on seeds, plant roots, etc., and might become fearfully noxious were it not for moles.

Nature's Balance.

This question of the interaction of lives on other lives is one of the most important of problems for study, and requires the most careful thought. We should not allow ourselves or our dependents to destroy a life unless we know exactly what we are doing. Laying aside the sentiments of cruelty and the right of all life to its life, it is important to know the truth—the whole truth—for our own salvation.

Nature is about as perfectly balanced as can be, and any great interference on our part, blindly, is more apt to destroy the equilibrium of things and eventually work our injury than to do us good. Some few lives we know are against our interests in every point, like the rat, mouse, English sparrow, bark-lice (scale bugs), every species of moths and their larvae and a very few other things. Such we should kill at every chance remorselessly; but with the great mass of life we should look and study very carefully before we destroy.

METEOROLOGICAL.

The Practical Prediction of Frosts.

(Written for the RURAL PRESS by XENOS CLARK.)

In the frosty counties and localities of this State there are so many nights when sufficient warning the evening before will enable vineyardists to save their vines, that a practical method of predicting frosts is highly desirable. There is such a method, one that is reliable, and much less widely known than it deserves to be.

It should be understood, in the first place, that the thermometer alone is quite inadequate for this purpose, the temperature at evening being a very unreliable guide as to the frost probabilities of the night. In two localities, for instance, that on a given night are precisely alike in all observable conditions, such as shelter, state of atmosphere, degree of cloudiness, direction and force of wind, etc., the thermometer may read alike in each at 9 P. M., and yet by 3 A. M., without any change in the weather, a heavy frost may prevail in one locality, while the other goes free. Of course there is a cause for this, which will be mentioned further on; the point to be noticed here is that the thermometer alone is a false criterion.

When, therefore, an Eastern market-gardener asks, "What is the lowest temperature at which I may safely leave the mats off my frames?" the answer is: "It is impossible to say; temperature is no guide."

And when, also, in the midst of the Eastern summer heat, some Jane night brings a frost, and all the newspapers wonder that the thermometer should have fallen so low at that season, it is in oblivion of the fact that the thermometer alone does not decide the question of frost.

What does decide the question is the dew-point, certainly one of the most interesting of natural phenomena. Dew does not fall at night until the air has been cooled to a certain point, and this is called the dew-point. It is not a fixed but a variable datum, being sometimes high and sometimes low, according to the condition of the atmosphere for the time being. If for instance there is a great deal of moisture (vapor of water) in the air, it will condense easily, say at 56°, and then the dew-point is high; if the air on the contrary contains but little moisture, this will not condense until the temperature falls considerably, say to 40°, and then the dew-point is called low. It is as if the air were a sponge from which cold squeezes the moisture—the less moisture there is, the harder must the cold squeeze to bring it out.

The most interesting and important fact about the dew-point is that when the air of night has cooled down to this stage, and dew begins falling, it cools no further. From that time forth the temperature of the night remains unchanged. This fact, somewhat difficult of explanation, is, nevertheless, one well ascertained, and its importance is evident, since if the dew-point for any given night can be ascertained the evening before, the lowest possible temperature of the night is at once known, and the question of frost or no frost decided. The instrument employed is one called a hygrometer, on whose scale, when exposed to the evening air, one can read accurately the amount of moisture present, and the consequent dew-point for the night. It is with this instrument that the predictions are made.

Returning for a moment to my initial statement, it will now be seen why temperature alone is an uncertain guide in forecasting frost. Evidently two evenings may be quite alike in temperature and all other observable conditions, while one, owing to an excess of the invisible moisture of the air, possesses a high dew-point and frost is improbable, and the other, owing to a deficiency of moisture in the air, possesses a low dew-point, and frost may be expected. It will be seen that to the observer with a thermometer, the two evenings are precisely alike, but to the observer with a hygrometer the difference is quickly revealed.

Many will remember that farmers back East are in the habit, when threatened with very cold weather, of placing tubs of water in the cellar to keep out the frost. The expedient is a reasonable one, as is now seen. The presence of water saturates the air with moisture, making a high dew-point, and thus preventing that fall of temperature which would induce frost.

To turn for a moment to some other considerations, it is well known that a windy night, or a clouded sky, prevents frost. Clouds operate in a manner similar to that employed by the gardener when he covers a choice shrub with a blanket. The effect of the blanket is to prevent the ground cooling by radiation at that spot; and the clouds are simply a big blanket

which covers the whole earth and prevents its radiating its heat. Just what gives the wind its influence it is less easy to decide, though undoubtedly one effect of wind is to prevent the accumulation of a colder stratum of air next the ground, especially in low-lying places.

The frost-predicting instrument which has been mentioned—the dew-point hygrometer—is one that requires some care and intelligence in its use; to such as can give it these it proves a valuable and reliable instrument. With its aid, and the use of mats, other coverings and smudge fires, the horticulturist, the fruit-grower and the vineyardist are fortified at their best against the damaging attacks of Jack Frost.

Those who desire may obtain this instrument of the Government Weather Bureau at Washington, which distributes it to farmers at cost price—\$7. It is accompanied by full directions for use, and by a dew-point table.

THE IRRIGATOR.

Value of Water in Fruit-Growing.

Gen. N. P. Chipman of Red Bluff, whose essay on cultivation we gave in last week's *RURAL*, continues his valuable writing in the *Red Bluff Sentinel* as follows:

I have called attention to the importance of thorough cultivation in order to retain the moisture in the soil. This importance comes from the necessity and value of water to plant life. I do not wish any one to infer from what I have now to say that there is any risk in fruit growing where we must rely wholly on the rainfall, because it is too well and firmly established in this State that in Central and Northern California we do not require irrigation of our orchards. All doubt has been removed at Vacaville and at Woodland and Davisville and around Sacramento, and all through the Sacramento valley, from Redding south. The point I now desire to bring out is that while we succeed well without irrigation, in certain departments of agriculture, we are not obtaining the highest results from the soil; much of our land that is not adapted to fruit, without irrigation, lies fallow, and our best soils are limited in their capacities, thus shutting out a wide range of profitable food products.

Water is the universal solvent, and it is chiefly in its office as a solvent that the properties of the soil essential to plant life are prepared, so that the tree or plant is nourished. The soluble properties of the soil are, by contact with water, made ready for the delicate and multitudinous mouths of the root system, and are taken into the circulation of the tree and cause it to grow. If the process of preparing this food is interfered with by drouth—by allowing moisture to escape and the ground to become dry—we immediately see the effect on the tree by its wilted foliage, and it will soon die unless water is given. Now, it is not the water alone that revives the plant and keeps it growing, because if you place the plant in a bucket of water it will revive temporarily, but it will still die. It is the plant food in the constituent elements and component parts of the soil, made available by the solvent quality of the water, that revives and sustains the plant. It must be evident to every one, then, that any method by which the greatest quantity of plant food can be taken into the circulation of the plant and assimilated, so to speak, and made to build up the tree in fiber, in leaf, in fruit, is the method we must adopt. A tree will grow, as any young of the animal kingdom, in direct ratio to the food it receives. On poor soil and with scant water you will have a tree like a skim-milk calf—puny and slow of growth. Upon what ordinarily passes for poor soil, with abundance of water you have rapid plant growth. On rich soil, with abundance of water, you have still more rapid growth.

There are some favored spots where nature supplies all the moisture necessary to reduce to fluid or vapor an adequate quantity of the life-giving properties of the soil. Sometimes this condition is brought about by sub irrigation or filtration or percolation from some reservoir of water not far below the surface, or from adjacent higher ground, or some running stream near by, or from some inherent quality of the soil, enabling it to hold almost all the moisture it receives, like the Thomas creek lands, which are phenomenal in this respect. But the great mass of agricultural lands are not thus favored. My observation and reading convince me that in a very few cases, indeed, will we ever be able to obtain the highest and best results of the soil without irrigation, and it comes of the fact that by judiciously feeding the tree it will make a correspondingly greater growth and fruitage. It seems to me that fertilization of the soils to promote growth (a thing everybody advocates) concedes the whole argument in favor of irrigation, for we irrigate for precisely the same reason.

Excessive irrigation, however, must be guarded against, and that it is not the source of most of the outcry against irrigation. The lady who is forever deluging her potted plants will have no flowers; she who intelligently observes when to give the soil water and gives the quantity needed, and no more, will be rewarded by buds and blossoms of rich color and richer perfume. The gardener understands this, as he travels among his vegetables with a watering-pot in one hand and a hoe in the

other. The farmers of the irrigated districts of Europe understand this, and the results attained are enormous. There is the best of evidence to prove that in England as high as 80 tons of rye grass have been grown upon an acre in one year. In a series of nine experiments in France it was shown that the amount of grain produced was increased largely by free use of water, showing that the measure of water consumed is the measure of the product or capacity of the soil. In England, 66 bushels of wheat are common with the best farmers.

But water is useful not only as a solvent to utilize the properties of the soil, but it is itself a fertilizer and enricher of the soil. No water is absolutely pure; the water of springs and streams holds in solution mineral and gaseous substances of great fertilizing value. You find lime, magnesia, soda, iron, sulphur, ammonia, etc., in almost all waters. The waters of our rivers and creeks are rich in fertilizing properties. The water of the Sacramento river, in times of flood, would be equal to a top dressing of rich manure to any land over which it could be passed so as to drop its load of fertilizers. A French savant estimated that each 200,000 cubic meters of the water of the Seine, employed in irrigation, will produce a quantity of alimentary substances equal to an average butcher's beef, and he estimated that the loss in the water flowing into the sea is equivalent to one fat ox every two minutes, or 262,800 in a year. Compared with the Sacramento river the Seine is very small indeed.

In the irrigated regions of the continent there are meadows, and in England also, that have yielded enormous crops for a great many years, receiving no fertilization whatever except from the water. I will not multiply instances, but it is no longer doubted that water is a valuable fertilizer in itself. We have, then, the double motive in applying it to our uses in orchards and vineyards as well as on our meadows and gardens. I cannot go into methods of application and the conditions of soil to be studied in its use, but I desire to arrest attention and lead our people to begin to think of the enormous loss they are sustaining by not applying the water, so easy to obtain, to our land. It is a large subject, but not so difficult that we may not comprehend it.

Our climate is adapted to the highest uses of water—indeed, Italy and the Indies offer no greater reward to the intelligent irrigator. In those countries great sums are expended by government in perfecting their systems. I may in the future show how we can accomplish as much with small expenditure of money, comparatively.

POULTRY YARD.

Good Care of Fowls Profitable.

EDITORS' PRESS:—Lack of proper care in the keeping of fowls always results in lack of eggs—at this season of the year, probably, less than at any other time, from the fact that apparently they can't help laying now, care or no care, but even now take proper care of them and you will find an increase in the yield of eggs that will repay you largely, and that not only in quantity but in quality and substance of your eggs.

I desire to call attention to the fact that cultivated eggs are much better in size, weight and flavor than wild eggs, because when the fowls are kept as they should be, to be profitable, they have an abundance of everything necessary to their being in first-class health and condition, as well as the needful surplus to make their eggs large, rich and full of substance.

No animal can yield a product, whether of eggs, butter, wool or whatever it may be, unless sufficiently well-kept to meet all these needs. Then, again, if one desires under such conditions to market a fowl or to kill one for his own table, he does not find it necessary to shut it up that it may not eat unclean food and so be unfit to be eaten until it is shut up and fed properly, because they are always in proper and fit condition to kill for eating. All he has to do when he desires to treat himself to a chicken pie or a broiled chicken is to kill and dress it with the certainty that it is already as good as it can be made. So both for profitable eggs and carcass, it pays to care properly for your fowls; a contrary course never pays in hens any better than it does in other stock. It is best to keep them right or not at all, and to be abundantly satisfied of this, one has only to go among those who keep fowls, observe their different methods and note results. One will say, "there's nothing in it," while the other goes on, laying by his profits and smiling to himself with satisfaction.

What do you say, Mr. Editor, to \$15 per dozen for chickens hatched in the last days of September last? That pays, I think—but common fowls, that is, fowls in common condition, won't do it. Mine did it. Plymouth Rocks, Langshans, and White Leghorns. Something, no doubt, is due to breed of fowls, as large fowls, other things being equal, will bring more than small ones, and as far as my experience goes, I prefer first Plymouth Rocks (next Langshans) as they hatch out a larger percentage, and as far as appearance in feathering is concerned are ready for market sooner than the

Langshans, although at the same age the Langshans will lead them a little in weight.

Perhaps the Brahmas or Cochins would be still better for that purpose alone, but if one desires to combine egg-raising with raising fowls for market, I decidedly recommend the Langshans or Plymouth Rocks. But while saying this I may say that one will find much difference in size in the birds of different dealers in fine stock, some breeding for certain points and others for others. Both my Langshans and Plymouth Rocks are perhaps larger than the standard size, although pure-blood fowls, but selected for size and along with size, prove excellent layers both in summer and winter, so that one may combine the two with profit.

While speaking of my own fowls, I would like to know if any one can beat this—a hatch of September pullets (Langshan) laying, that is, commencing to lay, at 4½ months of age, and laying freely at five months. Now, Mr. Editor, perhaps I am spinning this out somewhat, but my purpose has been to show that without proper attention to all the needs of your fowls it will not pay to keep poultry, while if you do attend to them closely and persistently, they will pay with any other business for the amount invested, and better than many others.

An old friend of mine not long since said to me: "I am getting too old to work or run around much now, and I think I will get a stock of fowls and keep a poultry ranch." "But," said I, "if you keep hens enough to pay you and attend to them properly, you will find that you have plenty of work to do, and some of it hard work as well, and all requiring close attention;" but he thought not. Well, if he keeps fowls his way the result will be one more added to those who don't find anything in it but loss—constant and watchful care and attention to details, however apparently unimportant, is the only way in which poultry can be profitably kept as a business. There is, perhaps, not much that is new to be written about poultry, but there is much that is necessary to be reiterated and insisted upon in order to lead people to see that there is a way and only one way to make the business a profitable and pleasant one.

T. B. GEFFROY.

Lodi, Cal.

Is Bamboo Durable for Coops and Fences?

EDITORS' PRESS:—I have become interested in the letters on bamboo fencing that have appeared in the *RURAL* of late, but have seen no mention made of its durability as compared with lath fences.

I am interested mainly because I think that very ornamental poultry-yards may be constructed of bamboo, and if it is durable and can be obtained as cheaply as laths, would doubtless come into use for such purposes and for confining many kinds of pets, pigeons, etc.

My question as to its durability is prompted by the condition of a poultry coop that I have. In 1886 I received a lot of Langshan fowls from China in a coop made entirely of bamboo. The frame was made of canes 1½ to 3 inches in diameter, the sides, ends, and top of about three-fourth-inch canes, and the bottom or floor of split canes fitting into grooves, and it was all held together by a few wooden pins in the joints of the frame. The drinking-cups were made of short sections of large canes cut off at the joints. As the coop was something of a curiosity, I placed it in a somewhat prominent position on the shady side of the barn, but not protected from the rain. I now notice that some of the bars have decayed at the ends where they enter the frame and are easily broken off.

If Mr. Sanders, who wrote in your issue of March 31st, can give any information as to the durability of the bamboo, it will please me and possibly many more of your readers.

H. G. KEESLING.

San Jose, March 31, 1888.

[It is not likely that the material used by Prof. Sanders and that received by Mr. Keesling are the same. The botanists tell us that the plant Prof. Sanders esteems so highly is a reed and not a bamboo, and that it should be called *Arundo donax* and not *Arundinææ*. The bamboos, so far as we have noticed them in the hands of the Chinese here, have a much harder and heavier stem than Prof. Sanders' reed. The question is, however, on durability rather than identity, and the subject is open for discussion.—EDS. PRESS.]

FOR SCALY LEG.—The Vacaville Reporter says: We have been requested by a lady, whose chickens are afflicted with scaly leg, to give the cause and remedy. The disease is caused by an insect which is identical with the insect causing itch in the human family, and it filth is not its prime cause it is greatly aggravated thereby, and cure may be effected by rubbing the parts with an ointment made by mixing equal parts of sulphur, lard and kerosene. An application about once a week, or two or three weeks, will be sufficient, when the substance will begin to peel off.

SUPERSTITIOUS people claim that a death is sure to follow the howling of a dog. It depends a good deal, the Quincy National thinks, on the kind of a whack one gets at the dog.

THE STOCK YARD.

Bloat in Cattle.

EDITORS' PRESS:—Bloat being very common at this season of the year, and the results often fatal, a word in reference to the same may not be amiss. Cattle that have been kept on dry hay should be given a good feed of dry hay before they are turned into green pasture. This will prevent them eating an excess of the green grass at the first. If, in addition to this, they are taken from the field early in the afternoon, very few, if any, are apt to be troubled with bloat. Some cattlemen take the added precaution of placing dry hay in the pasture, so that the cattle can have access to it at all times, and the cattlemen claim that the instinct of the animals will cause them to eat a portion of dry and green feed, and so avoid any tendency to bloat. As we are more apt to use preventives after we have met with loss than before a few simple methods that are in common use and of well-known virtue are more apt to be tried, the sooner the remedies are used the better.

The English method for simplicity is perhaps preferred; it consists in drawing a sack of some closely woven material over the cow's nose and mouth and fastening it over the horns. This compels the animal to breathe the same air and in some way gives relief very shortly. One gunnysack slipped into another, and thus doubled and then drawn on and fastened, does very well.

Another method of unknown origin, but equally effective, is to stand the animal with its front feet as much higher than the back as can be conveniently done, and if kept in that position relief soon follows.

As Americans are fond of dosing, this would not be complete without an added dose. The most simple is about 1½ pounds of all-fat salt pork cut into strips about an inch wide; to administer it, take a half hitch over the animal's upper jaw, with the hitching-rope draw the head up and force one piece at a time down the patient's throat. I can vouch for this remedy, as I have seen two as bad cases as ever came under my observation relieved in a very short time by the fat-salt pork cure. Some prefer lard of an equal quantity.

Another popular dose is from a pint to a quart of flaxseed oil; to this there is sometimes added sulphuric ether, laudanum and oil juniper. As this may suit Mr. Kill-or-cure better, I will give him the proper proportions:

Linseed oil.....1½ pints.
Sulphuric ether.....1 oz.
Laudanum.....1 oz.
Oil of juniper.....1 dram.
Mix, shake, and give at a drench.

The gunnysack, elevating the head, salt fat, lard and linseed oil remedies are preferable on account of their being always at hand.

Murphys, Cal.

E. H. SCHAEFFLE.

Shorthorn Sale at Sacramento.

Killip & Co. yesterday sold at Agricultural Park 41 head of pure-bred Shorthorn cattle, brought here recently by Joseph Combs of Linneus, Mo. There was a good attendance, the bidding was spirited, and good prices were realized for most of the animals. A 50-page catalogue had been printed containing the correct pedigree and breeding of each animal as recorded and certified by the American Shorthorn Breeders' Association. Following is a list of the cattle sold, name of purchaser and price paid:

Pauline—Heilbron Bros., Sacramento; \$95.
Rosie Lee—A. C. Dietz, Oakland; \$70.
Dixie II—Heilbron Bros., Sacramento; \$200.
Hester—Geo. A. Wiley, Danville, Contra Costa county; \$180.
Miss Leslie—J. Marzen, Truckee; \$100.
Lottie Lee II—J. Marzen, \$175.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Attempt to Repeal the Oleomargarine Law.

[By Mortimer Whitehead, Lecturer National Grange.]

The fight over the question of the repeal of the oleomargarine law, and the passage of one for pure foods of all kinds, is still going on in Congress, and it is well for farmers to keep posted in the matter, and a few points here given may help. The oleomargarine people have issued an elaborate "abstract," setting forth their views on the subject, and asking for a repeal or modification of the present national law. This has been put in the hands of every Senator and Congressman, and the strong pressure exerted by the Western cattle interest has been brought to bear on the subject. In the document sent out by the oleo manufacturers it is charged that the passage of the law was obtained by fraudulent means; that bogus samples, concocted by the opponents of oleo, were submitted, and that the law destroys one industry to benefit another. They claim that the law deals a severe blow to the cattle industry of the West—the tax levied to protect the cow has killed the steer; that 38,000 dealers have been driven out of the business for selling oleomargarine; and that the Government, being in no need of revenue, has no right to tax oleo in any sum beyond the amount necessary to enforce the law. They ask that oleomargarine be included in a general Act concerning adulterated food; that the tax be reduced to one cent per pound, and that the license fee for dealers should not exceed that charged for selling liquors and tobacco.

In answer to this it has been shown on behalf of the dairy interests that the samples submitted for analysis were procured in the open market, where they were being sold for butter, and that in the manufacture of oleomargarine the substances used cannot be heated to a temperature sufficiently high to kill the germs of disease without spoiling the product. Disgusting animal substances may be deodorized and used without danger of being detected in the result. It may be made so as to be unwholesome, but no one can tell, even from a chemical analysis, what fats and oils have been employed.

The law is said to be very poorly enforced. At least 13,000,000 pounds of oleomargarine escaped taxation, and over 500 retail dealers sold the counterfeit article without paying licenses. The effect of the law has been to advance the average wholesale price of butter in some cities from 21c in 1885 to 22½c in 1886 and 23½c in 1887. The object of the law was more to prevent dishonest dealers from buying counterfeits at a low price and selling them as genuine butter, than to advance the price of the real article.

The value of the dairy product of the United States exceeds \$600,000,000 a year. A slight advance in the price of butter, cheese and milk is of great benefit to the 7,000,000 farmers who are engaged in dairy pursuits, and their interests are of greater importance than those opposed to the enforcement of the Oleomargarine law. The adulteration and counterfeiting of butter diminishes the price of dairy products both here and abroad, damages their reputation and decreases the amount exported and consumed. The result of the legislation on the subject has been to restore the reputation of butter, enlarge the markets and advance the price. The law is claimed to be satisfactory, and Congress is asked to listen to no suggestions for amendments in the interest of manufacturers of counterfeit goods.

The bill as before Congress, and introduced by the oleomargarine interest, will, if it passes, repeal the present law and do away with taxes and license fees. It provides for the sale of imitation butter in original packages of not less than five pounds, and on the outside of the package the ingredients of the mixture must be stamped in plain letters. The section is worded so as to raise grave constitutional questions, and as its enforcement is left entirely to United States District Attorneys and the general public, it would be impracticable. Another section refers to pure food, and is evidently inserted for the purpose of obtaining the support of those interested in passing a pure-food bill.

BRO. H. E. HAYES has reorganized 17 Granges in Eastern Oregon. A good illustration of what a single strong-hearted Patron can do.—*Grange Bulletin*.

BRO. AMOS ADAMS is still confined to his room by severe illness, although improving, to the gratification of many friends.

The Grange.

The *Sutter Farmer*, after commending to the special notice of farmers and Patrons an article which lately appeared in the *S. F. Bulletin* under the title, "Interchange of Industrial Experience," goes on to say:

The question of the utility of the Grange breaks out quite often; therefore it is a comfort to record such high testimony in its favor. Christ never uttered a truer saying than "Where two or three are assembled in My name, there will I be also," meaning doubtless that in union there is strength; in conference, wisdom; in harmony, success. If this be true in religious affairs, it is doubly so in the daily walks of life. Three men closely allied will vanquish thrice their numbers who do not understand each other. Industrial education of the enduring kind is not found in the books; it has to be gained by experience and comparison, and these really were the only schools open to California agriculturists. Residing isolated and far from neighbors upon our great valleys, the cultivators of the soil were suffering for intellectual food and those social ties and fellow-feelings that could render us a happy and contented yeomanry. The Grange has furnished this opportunity. Farmers' Clubs and other organizations might have done so, but they did not. The Grange has displaced no other organization, society or party. Its members, by their years of training, are able and leading spirits in all organizations for the public weal. The Grange, being open to the gentler sex on perfect equality with the lords of creation, puts it at once at the very head of all industrial and social organizations, and vastly in advance of any similar effort in the world's history. It must be seen that such an Order and their frequent intercourse must of necessity educate and enlighten its members; must kindle a fraternal spirit, and supply the greatest needs of the farmers and their families, make their lives more enjoyable, their calling more agreeable, their labors lighter, their homes more cheerful, and last, but not least, their business more prosperous.

Sacramento Pomona Grange.

EDITORS PRESS:—Sacramento County Pomona Grange met in regular session March 31st, but, it being a rainy day, only a few members made their appearance. The Master's gavel did not fall until three o'clock. The Committee on County Exhibit, through their Secretary, Bro. E. Greer, presented their report. Receipts were as follows: from old Committee, \$111.40; from Picnic Committee, by order of Pomona Grange, \$50; from Board of Supervisors, \$100; premium from State Agricultural Society, \$300. Total amount of receipts, \$561.40. The report showed 56 exhibitors participating to make our county exhibit. The total amount of expense in making the exhibit, including premium to exhibitors, was \$450, leaving balance in hands of Committee, \$111.40.

The advisability of appointing the Picnic Committee was introduced, and the W. M. appointed as follows: Bros. John Keith and D. R. Hunt of Sacramento Grange; L. H. Fassett and D. Reese of Florin Grange; Wm. Johnston and J. B. Bradford of Franklin Grange; Thomas McConnell and Dr. Caples of Elk Grove Grange; M. Toomy and A. A. Krull of Enterprise Grange; J. E. Beach of American River Grange.

After announcing the Committee, and on motion of Bro. Greer, Worthy Master Sims was added to the Committee. The personnel of this Committee insures as a fact that our coming picnic, like our past ones, will be a success, for the Grangers' picnic has got to be the picnic of the season in Sacramento county.

The next meeting of Sacramento Grange will be "Literary Day." Come one; come all. GEO. W. HACK.

Grange Work and Progress.

It is now nearly certain that two of the important measures advocated and supported by the Grange will be passed by the present Congress. One, reducing the postage on seeds, plants, etc., from the present rate of 16 cents per pound to 4 cents per pound, has already had a test vote in the House of Representatives, with a very decided majority in its favor. The other matter is the issuing of fractional currency for use in the mails in place of postage stamps and postal notes. It would be well, now that the victory is nearly gained, if Patrons and farmers would once more write personal letters to their Congressmen, urging the passage of these bills in the interests of all the people. Specially urge it upon both your U. S. Sena-

tors, as it is in the Senate that the express companies will make their greatest fight against the reduction of postage. This work cannot be done too soon.

Grange Picnics.

The several Granges of Contra Costa county will hold a joint picnic at Danville about the first or second Saturday in May. The day has not been determined on as yet. However, preparations are going on. Yuba City Grange will hold its picnic in the latter part of May at Hock Farm. Sacramento will doubtless have a rousing Grange picnic during May. It is expected the Granges of Alameda county will be represented at the Contra Costa picnic.

Now we hope to hear that San Jose is going to have a Grange and farmers' festive gathering that will prove the picnic of the season in Santa Clara county. The brothers and sisters there can excel all other organizations in that line, the same as they have in horticultural fairs. It would seem to be a good thing to increase interest in the cause, and we hope soon to hear the spirit moving for a pleasant affair.

Watsonville, Santa Cruz, Santa Rosa, Stockton, Lodi, Roseville, and Plumas and Nevada counties, and all other Granges around the circle will do well to take a day's recreation, call out their neighboring farmers and their families and have a happy, life-extending, go-as-you-please festival. If three to four weeks' notice be given there is not a Grange in this State but what will make a success of a basket picnic and rejoice in harvesting an increased interest in their Grange and calling. It not only advertises your Grange, but your whole section of country. Discuss the subject and report all announcements early for publication.

Letter Fragments.

Bro. Geo. W. Hack writes from Sacramento as follows: The farmers rejoice, we having had a welcome and much-needed rain. In some places the land was getting too dry and hard to summer-fallow, a north wind having blown quite hard for several days. But with the copious rains of the past few days all will be able to continue plowing until it is all done. Everything looks encouraging and lovely, and everybody is happy.

WOODBIDGE GRANGE.—Bro. R. G. Williams writes from Woodbridge, April 3d, as follows: Woodbridge Grange will confer the third and fourth degrees on a class of four sisters Tuesday, April 17. The Pomona Grange will occupy the forenoon session, and be present in the afternoon as a visiting body. A harvest feast will be spread jointly by both Granges.

Temescal Grange.

A goodly number of the delegation that visited San Jose Grange last Saturday morning on their return favored Temescal Grange by their presence and cheering words the same evening, including Worthy State Master Wm. L. Overhiser, I. C. Steele, D. Flint, A. L. Chandler, T. T. Hooper and S. W. Sollars. The First Degree was conferred on two lads of 16 and 14 years in a very impressive manner by Worthy Master Overhiser presiding. Characteristic and earnest speeches followed from all the visiting brothers, making it a very enjoyable occasion.

Grange Elections.

PILOT HILL.—C. S. Rogers, M.; F. S. Lovejoy, O.; Mrs. G. W. Gray, L.; S. F. Lovejoy, S.; J. E. Sumpter, A. S.; J. P. Bayley, T.; A. J. Sumpter, Sec.; Miss K. Gray, P.; Miss M. Lovejoy, F.; Mrs. M. J. Lovejoy, Ceres; Mrs. A. B. Dollas, L. A. S.; J. W. Young, G. K.; J. W. Davis, Chaplain. GALT.—Seymour Carr, M.; S. E. Wriston, O.; Lester F. M. Fowler, L.; Hiram Chase, S.; Peter Planalp, T.; A. B. Bryant, Sec.; Sister T. C. Barnhardt, C.; Alice E. Carr, P.; Esther C. Carr, F.

THE FARMERS' ALLIANCE AND THE GRANGE IN THE SOUTH.—The *State Wheel* of Jackson, Tenn., says: "The Farmers' Alliance was first organized in Texas about seven years ago, and is an outgrowth of the Grange, which it has absorbed." To this the *Southern Cultivator* answers: "The Tennessee *Wheel* is off the track, as the Alliance has not absorbed the Grange in Texas or any other Southern State, but has made its remarkable growth from the scattered farmers of the South. There is room for both the Alliance and the Grange, and each can recruit new members in nearly every county in the South."

Important Meeting.

Pursuant to the call of Worthy Master Overhiser, the newly appointed District and County Deputy Lecturers, Past Masters and officers of the State and Subordinate Granges, and members who were interested visitors, assembled at the office of the Secretary of the State Grange, 220 Market street, S. F., on the 6th inst., W. M., Overhiser in the chair, and A. T. Dewey, assisted by Don Mills, acting as Secretary.

The roll of Lecturers being called, the County Deputy Lecturers responded as follows: S. T. Coulter of Sonoma, H. J. Ostrander of Merced, S. W. Sollars of San Joaquin, W. Renwick of Alameda, G. W. Hack of Sacramento, N. Merrett of Placer and V. W. Still of Nevada. The following Deputies at Large responded: I. C. Steele, B. F. Frisbie, G. P. Loucks and State Lecturer Flint.

Among others present were Bros. Daniel Field of Maine, O. Dennis and N. Jones, and Sisters S. A. Whidden, V. W. Still, Jessie Weed, E. Kelsey, N. T. Root and S. H. Dewey.

A committee was appointed to wait upon Governor Waterman, the Warden and the Board of Prison Directors in regard to the manufacture and sale of sacks at San Quentin. [In behalf of this committee, A. L. Chandler and G. P. Loucks have reported that they visited San Quentin April 7th and met Gov. Waterman and the Warden, Gen. McComb; ascertained that they are anxious the farmers should have all the sacks manufactured there at the price already fixed—eight cents, delivered at Jackson-street wharf, San Francisco, or on board cars or vessels for the additional cost of drayage. Terms cash, check to accompany the order; also that they were willing to furnish sacks to farmers' co-operative unions, to be supplied by them to the farmers of their respective counties.]

On motion of I. C. Steele, the Executive Committee of the State Grange was requested to investigate the subject of securing more favorable facilities in the purchase of goods than are now enjoyed by Patrons of Husbandry, and, if deemed practicable, make the most advantageous arrangements that can be secured with such business houses as they may select.

D. Flint, B. F. Frisbie and I. C. Steele, with the Worthy Master, were appointed to arrange a program of field lectures and meetings, to be held in a circuit throughout the State.

On motion of J. V. Webster, the Executive Committee were requested to secure the services of a good and true Patron to travel through the State organizing and reorganizing Granges, and to canvass for the Patron.

E. W. Davis, Wm. Johnston and A. T. Dewey were chosen to confer with the W. M. of Tulare Grange, in regard to arrangements for the next meeting of the State Grange.

Bros. Coulter, Still and Flint were appointed to examine the inspection service as laid out and followed by the Mass. State Grange.

A resolution offered by Bro. Webster, inviting Lecturers and members of Pomona Granges to meet annually with the Executive Committee, between the sessions of the State Grange, was carried.

Bros. Coulter, Dewey and I. C. Steele, as a committee on Grange literature, recommended that the Executive Committee of the State Grange direct the Secretary to procure \$3 worth of printed matter per month, to be distributed by the Worthy Lecturer where it will do the most good.

The Deputy Lecturers of each county were requested to assist in raising a fund of \$1000 for the exclusive purpose of putting Lecturers and Organizing Deputies in the field throughout the State.

Many interesting speeches and remarks were made in the course of this meeting, which was generally understood to be wholly advisory in its nature, with no authoritative control over the actions of the Executive Committee, State or Subordinate Granges.

Grangers' Business Association.

The annual meeting of the stockholders of the Grangers' Business Association was held at the office of the association, 108 Davis street, S. F., April 11th. The affairs of the association were fully canvassed, and Manager Van Every's report was a source of considerable gratification to the stockholders, as the year's business was unprecedentedly large and the profits likewise flattering.

The members of the old Board of Directors were unanimously re-elected to serve for the ensuing year, viz.: Chas. Wood, I. C. Steele, S. E. Biddle, J. C. Campbell, Thos. Upton, A. D. Logan, T. E. Tynan, J. W. Mitchell, E. W. Steele, A. T. Hatch, J. C. Merryfield. Also the following list of officers: I. C. Steele, President; A. D. Logan, Vice-President; Chas. Wood, Secretary.

A dividend of ten per cent on the capital stock was declared by the directors at their meeting, after the adjournment of the stockholders, and in addition to the dividend, upward of \$25,000 was carried to the Reserve Fund of the association.

The rapid strides which this house has taken during the past few years should be a source of pleasure to all connected with the institution, and its record for fair dealing should insure it extensive patronage from the farmers of the State.

AGRICULTURAL ENGINEER

Land Reclamation.

An Immense Pumping Plant for Reclaiming Tule Islands.

In the Pearson Reclamation district, near Courtland, Sacramento county, in this State, some very extensive drainage operations have been conducted in the past few years, and they have now the most extensive pumping plant for

9 to 14 feet. The average daily consumption of coal was 3750 pounds of South Prairie screenings for a run of 24 hours.

The next season they took out the 12-inch and procured another 15-inch, making two 15-inch pumps. This was in the fall, but in the following spring an order was given to the Tool Company for a 30-inch siphon centrifugal pump to be driven by a compound condensing engine. The average of several tests conducted personally by Mr. P. J. Van Loben Sels, the agent of the Reclamation Co., showed its capacity to be 37,907 gallons per minute at a lift of 11 feet 7

They can now handle all the water that they have to contend with at any time, and it cannot get "the upper hand" of them, or catch up with the pumps.

There are two 30-inch siphon centrifugal pumps with the compound condensing engine between the two, so arranged that by the connecting couplings either one can be run independently. Each pump has two separate suction pipes issuing from the sump on the inside of the levee, and there is one 40-inch discharge pipe from each pump passing over the levee and going down an incline to the river. The

angle, the same as the cow-catcher of a locomotive, so as to direct the weeds, etc., off to the sides, and the inclined form tends to make the material rise to the upper portion of the grating. The sump proper is 30 feet wide and 12 feet deep, with bottom and sides perfectly smooth, the mouth expanding like a funnel until it is 50 feet wide, and here the grating or strainer is placed. This enlargement at the entrance is designed so that even the obstruction at the grating, in case of floating weeds, does not impede the flow of water the full size of the sump proper. As the sump has straight sides and bottom, where the water passes through the straight portion, it is easily measured, and the amount of water pumped readily calculated.

The large engine for the 30-inch pumps is a compound condensing engine, with variable expansion gear—the latter enabling the engineer, without a moment's loss of time, to change the point in the stroke at which the steam is cut off and to modify the speed and power of the engine as the change of lift or quantity of water discharged requires.

The diameter of the fly-wheel is 58 inches, that of the low and high pressure cylinders, 14 inches and 26 inches respectively. The stroke is 18 inches; the number of revolutions is from 130 to 210 per minute, according to the height the water is to be raised or the quantity desired to be discharged under any given circumstances—which can be increased from a minimum of say 10,000 gallons per minute, to a maximum of 60,000 gallons per minute for each of the two large pumps.

This engine has, like all other engines made by the San Francisco Tool Company, received the greatest possible care in its design and workmanship. The working parts are reduced to the fewest number possible without sacrificing its efficiency, and are thoroughly balanced. The bearing surfaces are of exceptionally large area, and the lubricating arrangements most perfect. The most of the forged parts are of the best hammered steel, and all the materials used in their construction as well as the workmanship are of the best description.

In a test of one of the 30-inch pumps run by the engine, the following results were shown: The total discharge of the pump was 37,907 gallons per minute, lifting water 11 feet 7 inches high, the engine developing 124.8 horsepower nominal, consuming 12,125 pounds of average Sydney coal in a run of 24 hours.

Steam is furnished for this plant by a battery of four boilers, two 48-inch by 16 feet, and two 60-inch by 16 feet. The boilers are arranged so that they may be disconnected at any time. There are two feed-pumps. The pumps are also connected with fire hydrants throughout the buildings, and connected to a tank at an elevation on the building.

In front of the boilers and on top of the levee are bunkers to hold 400 tons of coal. The floor of the bunkers inclines 30° to the furnaces, and there are sliding doors, so the supply is drawn to each furnace without handling. Schooners which come up the river hoist their cargoes of coal directly into the bunkers. The engine-house building, sleeping-rooms, etc., are artistically and substantially made. They are of rustic exterior with circular windows and other ornamental details. The interior is tastefully finished. The whole plant was made by the San Francisco Tool Company under the supervision of Mr. P. J. Van Loben Sels, for the San Francisco Savings Union, and as the largest reclamation plant in the United States, reflects credit on the designers and builders.

Live-Stock Sales.

On page 323 of this issue appears the account of sale of Shorthorns last week at Sacramento. The sale was active and quite satisfactory.

We note also private sale of 35 head of Shorthorns by Bill & Burnham of Kansas to Mr. Marsden of Truckee. Messrs. Bill & Burnham are breeders of Shorthorn cattle and Clydesdale horses at Manhattan, Riley county, Kansas. They are quite satisfied with their sale of stock to Mr. Marsden, and propose to go further in bringing choice stock to this State. If all goes well they may be expected out here again about the time of the fairs with a good lot of animals.

Col. Younger, the veteran Shorthorn breeder of San Jose, on account of advancing years, offers at private sale his whole herd of Shorthorns, which he has given so many years to building up, and with which he has secured such a fine string of awards at our State and district fairs. These cattle are so well known that there ought to be no trouble in placing them. Killip & Co., our leading live-stock salesmen, have charge of the sale of Col. Younger's cattle, and will give all desired information personally or by letter. The formal notice of the sale will appear in our advertising columns next week.

Another sale which will attract wide attention is the annual sale by J. B. Haggin of driving, work, draft and saddle horses and Shetland ponies. The annual sales by Mr. Haggin are becoming fixed events in our agricultural calendar and represent the annual crop from the valuable breeding blood which he has secured at great effort and expense. Catalogues can now be had of Killip & Co., who have charge of the sale, which will take place May 2d. The horses can be seen after April 28th at the Railroad stables, corner Turk and Steiner Sts., S. F.

Fig. 1.—SIDE ELEVATION OF PUMPING PLANT FOR LAND RECLAMATION PURPOSES.

reclamation purposes in the United States. The Pearson Reclamation district is one of the largest on the coast. It consists of 8800 acres of very fertile land, surrounded by a well-constructed levee, of an average height of 18 feet, and some 15½ miles long.

inches, the engine indicating 156-horse power, with a consumption of 4.4 pounds average Sydney coal per actual horse-power of water raised per hour, the most satisfactory and economical showing so far made by any reclamation pumping plant.

lowest part of the discharge pipe is always submerged.

The pumps are primed from the jet-condenser, which acts as a condenser for the compound engine and the Meyers' engine, which also forms part of the plant. The pump, on being

Fig. 2.—SIDE ELEVATION OF PUMPING PLANT WITH COMPOUND ENGINE.

When they first began operations there a few years ago, the San Francisco Tool Company furnished a ten-inch pump, with a capacity of 3000 gallons per minute, run by a 12x24 Meyers cut-off engine. This worked for one season, but was not sufficiently effective for the large tract it was designed to drain, being unable to cope with the seepage water. With larger pumps and the same engine, three times the work was accomplished. It was exchanged for a 12-inch Turbine pump, and a 15-inch Gwynne pump was added. These were calculated to raise at least 10,000 gallons over, if with an indicated 40-horse power, against a head of 10 feet.

The results of accurate measurements made by a thoroughly competent and disinterested civil engineer, showed that with only 88 revolutions of the engine, or 264 revolutions of the 15-inch pump, and 234 revolutions of the 12-inch pump, they were able to raise over 16,000 gallons per minute, with an indicated horsepower of about 50, against a head ranging from

At the time the 30-inch pump was ready to run there were 2000 acres of land under water, resulting from the excessive rains of spring, and by the middle of June the water was all pumped off, and there was a crop of barley in places where the water had been seven feet deep. In one part of the 2000 acres there was a lake of 350 acres seven feet deep.

In the following fall the Reclamation Co. decided to still further enlarge the pumping plant and put in another 30-inch siphon centrifugal pump. This was placed on the other side of the engine, and arranged so it could be coupled directly. The pumps are made so that at a low lift, if the outside water is not too high, both pumps are used; but if the water in the river or slough outside the levee is over 12 feet, one pump is disconnected and only one run.

With this increase of machinery they were enabled to increase the acreage under cultivation, and 3000 acres were now added, so that now the whole district is being cultivated.

primed, have the valves left partially open to the condensers, so that any air accumulating is taken up by the condenser and the siphon action is never impaired in the pumps.

The two 15 inch pumps stand directly over the sump, each having two suction pipes and discharging into one large discharge pipe. They are driven by the 12x24 Meyers' cut-off engine by belt connections. They are now used to drain the land when there is not enough water in the ditches to supply the large pumps.

Fig. 1 is a side elevation of the 12x24 Meyers cut-off engine and 15-inch pumps, condenser and 30-inch pump, looking from the boilers toward the compound engine.

Fig. 2 is a side elevation of the compound engine and 30-inch pump, also showing angle of the four 28-inch suction pipes.

The sump is arranged in a peculiar manner. The mouth is 50 feet wide, and has a grating set the full distance across for collecting floating vines, debris, etc. The grating is set at an

My Mother.

Old and wrinkled, with silvery hair,
And eyes dimmed with the touch of time,
My mother sits in her old arm-chair,
Weaving threads of gold with her autumn time.
Once my mother was young and fair,
When the wood-lark warbled her wedding chime.

And she oft times speaks of the quaint old ways
Of the long ago, and catches gleams
From the summer-land of her vanished days.
Through the mists of years, till the present seems
With scenes that gladdened her childish gaze
And forms that peopled her youthful dreams.

The old log house, with its homely cheer,
She remembers well, and how, when a child,
She stayed by her father's clearing near
O'er a corduroy road, through forest wild—
A way that grew fairer year by year
Till fields of plenty beside it smiled.

She recalls the preacher, rigidly brave
To battle with creeds and foes unseen,
The quaint old church, with its echoing nave,
Its old time choir, and Sabbath's serene;
While summer now over the preacher's grave
And the site of the church spreads a mantle of green.

She sits with her knitting and heeds not
The ways of the world that come and go,
Its murmurs of strife are scarcely caught
From the far-off tides that ceaselessly flow.
Home is her world, in a lowly lot;
Her crown was won where the daisies grow.

And I am the hero of that world,
The genius of all, whom her minstrels sing—
I, so nameless, an atom swirled
In the throng, where the deeds of the great scarce ring;

For me love's banner is gently unfurled—
I am the hero, I am the king.

Old and wrinkled! Those lines of care
Were written for me; there is wealth untold
Blossoming out from her silvery hair,
Better to me than houses and gold.
Once my mother was young and fair;
God bless her now she is wrinkled and old!

—Alfred Cole, in *Portland Transcript*.

Stick to Your Lands.

[By JOAQUIN MILLER.]

I beg of you to believe in the dignity and the high nobility which attaches to him who holds some part of this solid globe as his own. I want to repeat that the man who holds land in California, or anywhere about this Pacific Coast, is resting in the certain road of fortune. Progress is coming this way, to camp here, to stay here.

"Shake off the yoke of inauspicious stars
And here take up your everlasting rest."

For my own part, come to me when you may, my friends, you will find me on my steep and stony hills on the high sea bank, working there, waiting there, very glad, very content, very grateful that I have a little possession in the best part of the earth. And death, soon or late, shall find me there.

Ages ago there was a weak tendency, as there ever has been, and most especially is now, for the populace to forget the good green fields, the strong good mother who gives strength to all, and pour into cities. And then it must have been that some one told this pretty story, which I here briefly set down:

An old farmer and shepherd having grown very wealthy from a sudden boom in town lots, and a high protective tariff, perhaps, concluded to stop work and journey down to Athens and see Alcibiades and other young idlers about town.

And so, leaning on his staff, the goodly old shepherd king set out for the city, leaving his happy mountain home, his fertile fields, his good old mother earth that had made him strong as a lion to take a back seat in his affections. The stout and worthy old farmer king with a well-filled purse was certain he could go to the city and be a big man there. Poor old fool! He had not read the statistics which show that 93 per cent of all men in cities fail and resort to the bankrupt law for protection. He had not read that 100 per cent of all men there are more or less miserable.

Well, on his way down the mountain in a narrow path he met the champion tramp of his age, a sort of cross between John L. Sullivan and the late Mr. Samson who had his hair cut, and this champion tramp, who had a habit of tearing the jaws of lions and breaking men in two across his knee, demanded that the old farmer should get out of his road. The idea! There were seven rounds fought right there and then. The

first blood for Sullivan; and also the second, and also the third; and so on to the seventh! Once! twice! six! seven times the old farmer was driven to the ropes! caught in chancery! floored! and yet each time that he fell to the earth the good green earth gave him new strength, and he sprang to his feet stronger than ever. And so it was that at the end of the seventh round this John L. Sullivan of the ancient days gathered up his grip-sack and started back to Armenia, leaving the old farmer in full possession of the entire earth, so far as it had then been discovered.

When Augustus came to the throne of his murdered uncle he also found the people disposed to leave the fields and pour into the cities. And so the foregoing fable, in all its elaborate detail, was preached to the farmers throughout all the Roman Empire. The wise Emperor even sent for Virgil, the poet, who was born and still abode in Naples—where his statue and his tomb are still shown to the traveler—and made him almost a prince in fortune and dignities in order that he might the better teach the dignity of pastoral life. And what schoolboy to this day is not the better lover of mother earth for his *Tu Tityre*, etc.? And until we can have a new "Georgic," or at least another Virgil to make the pastoral life pleasant to men, why, let us all read Latin, if only to get this honest love of the beauty and the strength and the glory and the dignity of this great, good mother deep in our hearts.

And may I be indulged a moment if I venture to deprecate the singular action of the daily press toward all those who live remote from the great cities? Strange as it may seem, the man who lives not in these teeming, rushing centers of rottenness is a "hayseed," a "rustic," a "rural!" And yet who was the father of the poor simpleton who writes all these things of the farmer, the country editor, and all indeed who dwell not at the Capital? Why, the bright and brassy young man who writes these things was himself born among the cows. And indeed no man yet of any great account was ever either born in a city or reared in a city. The great men of earth have ever been born and reared on the grass, close to the bosom of our mother.

And yet the weak and silly young man of the daily press seems to be ashamed of his birth. How pitiful!

Perhaps not a day, certainly not a week, passes that some one does not apply to me either in person or by letter for help in getting a position as clerk in some city.

Do you remember what Webster said when a man applied to him for a place as clerk? And do you remember how thankful the young man was in after years for the snubbing Webster gave him? And do you remember above all things the first act of Webster after he got rid of his public responsibilities? Why, he bought a bit of land, a pair of oxen and a plow; and there he plowed, and there he planted; and there he died.

All honor to those who serve us well. "They also serve who only stand and wait." I have been a clerk, a cook, a waiter; been many things when not strong or able to do better. But with a bit of land under my feet and great blue skies above me I shall escape such feeble and feminine employment. I shall keep remote from the folly of the city, I shall plow, I shall plant, I shall test my sinews with the strength of the earth like the masters of old, be stronger, be better, and so be able to make one little portion of this beautiful earth still more beautiful.

Oakland, March 31, 1888.

Spring Flowers of California.

It has been a long and rainy winter, colder than usual in California, and the flowers of field and hillside are much later than for many years. In regions where the manzanitas often blossom in January, they were not to be seen until six weeks later. March began stormily, with hardly more flowers of spring than I have sometimes seen at the same season in Maryland, by the Chesapeake shores, where the white cups of the bloodroot whiten the banks, and the exquisite May-flower begins to bloom in March or April, according to the character of the season.

The beautiful pea-flowered cercis, or Judas tree, is one of the most conspicuous wild shrubs to be seen during March in the Sierra foothills. The central portions of the Coast Range show much that is worth the search; buttercups, pink and yellow, wood sorrel, early ceanothus, flame-colored eschscholtzias, tree lupines, hosiackias, a few wild roses, yellow-green chemical, golden wood violets, white-centered trillium, and superb masses of aristolochia, climbing many feet up the budding oaks. In a month there ought to be some azaleas in Santa Cruz and Marin, but March is too soon to begin a search.

leas in Santa Cruz and Marin, but March is too soon to begin a search.

The California pioneers of those free and quiet days before Mexican wars and gold fevers are never tired of describing the glorious spring apparel of the wonderful land as it lay unfenced, unplowed, unpossessed. In 1842 and 1843, when there were only two settlers in the whole Napa valley, and when the entire Upper Sacramento was a wild garden, the beauty and exuberance of the flowers and grasses impressed the rudest hunter. No one can form an adequate conception of the wealth of bloom in such valleys as Sonoma, Napa, Marin, Santa Clara, Sacramento and San Joaquin, before the herds of cattle and bands of sheep trampled the soil, and destroyed nature's great wild garden. Seas of flowers that have been exterminated, leagues of wild oats, mustard-fields in which, when in bloom, men on horseback could lose themselves, wild lilies bedded in masses extending for rods—these the few Americans who were in California before 1847 were able to see, and then the slow change came. Wild flowers that 40 years ago spread in broad carpets from mountain to mountain across great valleys have retreated to bits of rock and ravine, to sunny hill pastures and warm oak openings not yet needed for vineyard and orchard. It is the same old story that the West and the Southwest have known; herdsman and plowman destroy so fast that the botanist can hardly gather, name and place in his herbarium, before some shy, delicate species become but a memory.

When our wild flowers are almost gone, I suppose that people will begin to want them to plant in gardens. Perhaps some day the lovely California shrubs and trees will be found in public places, instead of the hideous eucalyptoids and scale covered acacias. Perhaps we may even have sacred forest reservations in the heart of the Sierras, around Mount Shasta, and in the "big basin" of the Santa Cruz region.

It is a pleasant thing to notice how California plants are appreciated elsewhere. England's best gardens are full of California wild flowers. That magnificent poppy, the *Romneya Coulteri*, queen of the whole family, and deserving a place on every Californian lawn, is the pride of English gardeners for its grand decorative effect. Last year the white and yellow azalea of our woods was taken to England, where it attracted much attention, and is being propagated very extensively. Our cercis is called better than the Japanese, and our clematis is everywhere recommended abroad. I suspect that an English nobleman would pay almost any price for a vine of our wild grape, as it grows on Alameda creek, or along the Arroyo Linda, Sonoma.

Very few of us begin to know, as yet, the garden wealth of the Pacific Coast in its own trees, vines, shrubs and annuals, but after a while we shall learn, perhaps before it is too late, to save our best species from entire destruction. Some, the botanists tell me, already appear almost lost.

But one cannot quite despair—so freshly, after all, the California spring tides still eddy each year about ravine and hill. Perhaps before the last scarlet-stemmed arbutus tree is cut down for firewood, some Western Thoreau may come to dwell among us, and give his life to teach us anew the gospel of nature, until even the sheep-herder shall be converted, and the tan-bark hunter made ashamed of himself.

Let us cease to measure California with its own flower-prime of '45, and it will still seem a paradise of spring blossoms. No matter how dark and chill the Januaries and Februaries are, March richly rewards the eye that sees; stray flowers bloom in places hid from the profane, at spring-moistened bases of vast masses of rock which project like giant fortresses from the sides of steep ravines, or on sun-warmed hand breadths of leaf-mold held in high crevices that sheep and cattle cannot reach. Here first they bloom; flowers that not until May become common over the broad pastures, and in the dark wayside grass. Always beautiful—yes; but never again quite so perfect as when first found in early March days, by one's self, after long and ingenious quest.

To find flowers a little before their acknowledged season, requires a sort of wood-craft that strongly tempts a man to be proud of his skill. A dozen clumsy people have hunted through the canyon, and they bring back only common things, plain in sight, brake, fern, willow stems, raspberry. You, wiser on the subject, skirt the southern borders of the trees, peering into oak-openings, examining nooks between the rocks, and the sharp, sheltering turns of the canyon. You study well the bases of ancient land-slides, warm and fertile; you know the ground gravel of a glacial moraine, the outcropping of volcanic soil, the steep, high shelters of the very head of the canyon, where your best results may be found. At last, turning aside, led by some instinct or training, or by the fine attraction of the flower itself, you find that hidden hand-breadth of spring perfection—that first scarlet delphinium, that mass of mimulus, or that colony of fritillarias.

And when you gather these for some pretty girl to arrange in a shapely vase, you are very careful to leave the roots undisturbed, you only harvest the surplus. Most of the young fellows who go out on the hills to gather bouquets are plant-killers, and indeed most of the girls are quite as bad. I have walked along a canyon after a party of picknickers and tracked their course by the broken shrubs, the clumps of bulbs pulled up, the rare ferns destroyed, and the trampled, uprooted annuals. When

the picknickers are shut out of a ravine, the rarer species begin to grow again, but it is slow work. I do not see why any one can wish to pull up a fern root, when the fronds are so easily picked, nor why a lily stem should be pulled up, and the bulb ruined, nor why the azalea bushes—as on Howell mountain, for instance—should be fairly broken to the ground by pleasure parties and thrown away an hour later. But then I never was a sportsman, and perhaps I do not understand these things.

April in the Elizabethan poetry is changeable, sweet, and coquettish; it is like the Februaries that we know so well in California. April here is the first radiance of the full rose-garden, the farewell of the scarlet quince and the purple lilacs. Wide open the gates of garden-land are flung, and growing vines fasten them back till December comes again. It is at last the California June-season, this April with its grass green slopes purple with dodecatheons, brown and golden with violets, snow-white with gillias, and blue with heavenly azure of memphillas. Break the chains of habit, good air; bring back the dreams of your childhood; walk abroad in the sunlight, and cease to think of how you can circumvent your neighbor.

A month ago, the most beautiful things that I could find in the foothills of Tehama, Butte, Merced and Alameda were not flowers, but branches and buds, yellow willows, purple and smoky-hued dogwood and blackberry vines, scarlet of madrone, dark green of mountain lilac. I think that no other American flora is so rich in color of buds and stems as the Californian. If the delicate pinks, scarlets, yellows, and purples that beautify the winter landscape here could only be varnished so as to retain their brilliancy, no finer decorations for rooms could be devised. But the charm of color is as evanescent as it is attractive. With the first breaking of the buds, the delicate shades disappear, and all the stems approximate to shades of green. The mysterious buds, which one could pull apart and discover to be shell-tinted and lovely, become growing leaves and flowers, or sturdy young branches which mean to be stiff and thorny by summer. The winter's purple thickets have greenened and whitened into spring-time hedges. The deep tints of the almond and apricot twigs faded long ago, and they settled down to the practical pursuit of developing what fruit the late frosts have left them.

Yet California has such varieties of climate that one can still find the rich colors of leafless wild-rose thickets by climbing far enough toward the snow-line. Beautiful, too, aside from color, are leafless shrubs, as the amateur photographer knows. His delicate bromide prints, or, better still, his negatives held up to the light; make of these dull-looking briary hills a joy forever, even if there are no flowers to speak of.

But April! This is California's fairest holiday and cheeriest season, though May and June press April hard, and not until July have we a right to say that blossom time is passing in the valleys. Even in July, on the cloudy mountain heights of the east, in the realms of quartz and granite, above the last pine and oak, the wild flowers are hardly ready to bud, and the new grass is springing in the melted snow-drifts. These April days the San Joaquin farmer can stand in his pink-blossomed apple orchard and watch such mountain rivers as the Chowchilla and Mariposa hurry past his ranch full to the brim with Sierra snow—wild torrents each afternoon, but hardly waist-deep at daybreak. Perhaps, down the river, torn from the hillside and floating heavily, come yellow-stemmed Carpinterias from 50 miles away, dark-leaved, with large, snow-white flowers; or the lilac spikes of the yerba santa, from mountain bee pastures, or the great golden blooms of the fremontia, or even as I have seen them, tree-trunks uprooted, and still bearing masses of earth high over the floods, with turf of mountain grass, starred with delicate mountain blossoms.

In the great lowland heart of the State, where slow rivers wind about tule-bordered islands, the farmers are planting their potatoes and planting their wheat-fields. But on the hills of Stanislaus the farmer's potatoes are blossoming, and his wheat is half grown. California Aprils are crowded with such contrasts. In a couple of weeks the emerald heads of chevalier barley will be bursting their pea green sheaths; and in the maples birds have rented summer lodgings.

North, in the upper Coast Range, the season is a month later, but toward the south it is a month earlier, and the roads are already dusty, though spring is still in its prime. It is the month of scarlet oak leaves in the foothills, and if one climbed far enough, the mitted school-children going by could tell you of an Eastern April.

Imagine trying to write in one paragraph about April throughout Western Europe! That would be easier than to tell what April days are like from Oregon to Mexico, from the tules of Rio Vista to the scarlet snow plants growing on Lassen.

Those who go to the woods will understand; as for the rest, they are useless for the purposes of this article until something grows from their dust. It is better to lie in the April grass while one may than to know nothing about grass until one helps against his will to nourish it. That is what a philosopher hinted to me not long ago, and on the whole the doctrine seems worth the attention of those to whom all seasons are alike, and all places.—Charles Howard Shinn, in *Overland for April*.

YOUNG FOLKS' COLUMN.

Justice.

(Parody on "A Picture from Memory"—WHITTIER.)

A picture memory brings to me,
I look o'er vanished years, and see
Myself across my mother's knee.

I feel her strong, firm hand restrain,
While whack, whack, whack, I feel again
A child's blind burning sense of pain.

But wiser now, a woman grown,
My mother's trials better known,
The justice of the blow I own.

With riper sense, I p'ainly see,
That as my mother paddled me,
So must my children paddled be.

Grass Valley, Cal.

MAUD S. PEASLEE.

How a Brave Boy Succeeded.

(Written for the RURAL PRESS by O. B. SERVER.)

"Mary," said Mr. Howard, "I think as Jerry's birthday occurs two weeks from Wednesday, we ought to get up a specially good dinner in his honor, and invite a few of his friends. He was very fortunate to obtain his place when there were so many applicants, and his employer tells me he is giving excellent satisfaction."

"Yes," said Mrs. Howard, "Jerry is a good boy, and I will prepare the best dinner that money can buy, and invite three or four of his old schoolfellows to share it with him."

John Howard lived in the suburbs of the city, in a small, neat cottage, which, by dint of the closest self-denial and economy, he had purchased a year or two previous to the above conversation. A native of New York State, in his younger days he had conducted a thriving business in one of the manufacturing towns of that great commonwealth; but the wave of "hard times" in the '70's had swept over him and he was borne down with the tide, and upon the settlement of his affairs found himself the possessor of but a few hundred dollars. At that time the children—Ellen and Jerry—were quite young, and after much thought and deliberation, Mr. and Mrs. Howard concluded to sever old ties and surroundings and try their fortunes in the Golden State.

Upon their arrival in San Francisco Mr. Howard discovered that the position of book-keeper—for which vocation he was best fitted—was not readily obtained. Several weeks elapsed ere he secured a place, and that at a nominal salary, far below that which his capabilities deserved. However, he gladly accepted the position, and the children being placed in school, the family settled in the outskirts of the city in a home of their own, bought mostly on credit, the mortgage on which was now nearly canceled.

Although desirous of giving his children a good education, Mr. Howard had yielded to their earnest entreaties, when Ellen was 16 and Jerry 14, to be allowed to leave school and go to work, that they might contribute toward liquidating the debt on the little home.

Ellen had entered the office of a wholesale firm, as stenographer, an accomplishment to which she had devoted special study while at school. Her success in the position had been so marked, and her conscientious efforts were so highly appreciated by her employers, that at the close of her first year her salary had been voluntarily advanced to what was considered a liberal remuneration for a young woman. This generosity of her employers was doubly welcome to the girl, for, besides enabling her to dress in accordance with the surroundings of her position, the increased salary became the means of gratifying her cherished ambition of aiding to cancel her father's debt on the house.

Jeremiah—or Jerry, as he was usually called—had also been fortunate in his quest of business. Through the exertions of a school-mate whose father was in affluent circumstances and wielded considerable influence, he secured a berth as boy-of-all-work in a down-town mercantile house, where, attending strictly to his duty, he had gained the confidence of his employer until he was promoted to a desk in the office as bill and invoice clerk. His salary had been slightly increased, but as the proprietor of the establishment bore the reputation of being "a close-fisted old curmudgeon," even the small "raise" was looked upon by Jerry's fellow-clerks as something extraordinary and quite at variance with the common order of things in Mr. Stillman's establishment.

Jerry was a great favorite with his fellow-employees. He was naturally courteous and obliging, and never hesitated in conferring a favor when in his power, even though doing so involved self-sacrifice. On numerous occasions he had remained at the store long after business hours engaged in labor not pertaining to his own department, but for the purpose of assisting some clerk who was "behind" in his special work.

His employer, too, evinced his confidence in the boy in the most decisive manner. In addition to his desk duties, Jerry was frequently sent to and from the bank with deposits often amounting to thousands of dollars. This mark of confidence inspired him with a proud sense of trust reposed in him, and he would no more have thought of abstracting the smallest coin than of jumping into the bay.

It was the week preceding Jerry's birthday. The winter rains had begun, interspersed with

beautiful sunny days and balmy breezes from the ocean, and the hills were putting on their coat of green. Shrub, plant, and flower, parched by the long summer drought, were beginning to assume their pristine appearance, and the whole aspect of nature was revivifying and exhilarating—such as is only seen at this season of the year in our own heaven-favored State—so pleasing a contrast to the ice-bound and stormy East, where November's blasts howl with telling effect on animate nature, freezing the lakes and rivers, and giving a foretaste of months of frigid atmosphere and blizzards.

"Father," said Jerry, as the family were at dinner one evening, "I heard Mr. Dinsmore, the assistant book-keeper, say to-day that he feared he would be obliged to resign and go South. You know his health has been poor for some time, and his cough is absolutely frightful."

"Poor man!" said Mr. Howard, "I'm afraid neither the South nor any other locality will avail him. The last time I saw him he resembled a walking skeleton. Consumption has too firm a hold on him to render change of climate available."

"I was thinking," continued Jerry, "that Mr. Stillman might give me the vacant position. You know I studied book-keeping at school, and my teacher said I made rapid progress in it."

"Don't be in a hurry, my boy," replied his father. "There are other clerks who have been in Mr. Stillman's employ much longer than you, and they will naturally take precedence in promotion. Be patient, Jerry, and advancement will come in due time."

"Well, perhaps I am too hasty," said the boy; "but I thought I might possibly get the place."

One morning, a few days subsequent to the above conversation, Jerry was sent to the bank to deposit \$1000. He started out whistling merrily, with the bag of coin thrown over his shoulder, and had nearly reached the bank, when at the corner of two streets he observed two ill-looking, shabbily-dressed men following him. Grasping the bag in both hands, he clung to it firmly and quickened his footsteps. When within a stone's throw of his destination, he glanced around and saw the men almost at his heels. Before he could avoid them his throat was encircled in a tight grasp, his arms seized, and a hoarse voice hissed in his ear:

"Hand over that sack, boy, and be quick about it!"

He was almost suffocated with the pressure on his throat, and the pain in his arms was so great that he nearly fainted; but rallying all his energies he clung to the sack and made a desperate effort to break away, shouting "Help! police!" at the top of his voice. At that moment his foot struck a projecting curbstone and down he went in the mud, gasping for breath, but still holding on to the sack.

The attention of the passers-by was by this time attracted, quite a crowd had collected, and the robber, seeing his nefarious scheme frustrated, released his hold and ran rapidly down the street, followed by his companion, and as no one attempted their capture, and an officer was not in sight, they effected their escape.

Covered with mud, bruised, half choked and with aching bones, Jerry picked himself up and proceeded to the bank, where his disordered appearance at once attracted attention. After replying to numerous inquiries and receiving warm commendations for his pluckiness in resisting the thieves, he deposited the contents of the sack.

Jerry's bright face and courteous deportment had been often remarked by the officers of the bank, but his name and address were unknown to them. The cashier, coming forward, inquired:

"What is your name, my brave boy, and where do you live?"

"Jerry Howard, sir, and I live with my father at 2743 B— street."

"Well, you had better go home at once, change your clothes, and have your mother attend to your bruises. I will send word to the store explaining the cause of your absence."

"I am not seriously hurt, sir; but I will go home for a change of clothes and return to the store," replied Jerry.

As he left the bank the cashier remarked to the teller:

"We must keep an eye on that boy. He is made of just the stuff we want, and I am inclined to offer him the first vacant position in the bank."

When Jerry's mother heard of the danger to which he had been subjected, and the stout resistance he had made to the thieves, she was greatly alarmed, but in her heart felt prouder of him than ever. Not every boy exposed to such peril, she thought, would act so bravely, but would surrender the money to escape personal injury.

Upon his return to the store, Jerry was warmly received by the clerks, who had heard of the occurrence, and who informed him that Mr. Stillman desired his presence in his private office.

"My boy," said that gentleman, "I am deeply gratified at your brave conduct this morning, and will endeavor to show my appreciation of it in a substantial way. I have long admired your manly behavior and industry, and had concluded, previous to this unfortunate event, to promote you at the first opportunity. Mr. Dinsmore's position will be vacant the first of the month, from which date you will fill it, of course at the salary he receives.

Meanwhile, to prove that I am not ungrateful, here is a check for a hundred dollars for your plucky and successful efforts to save my money."

"Mr. Stillman," replied Jerry, "I am very grateful to you, but I don't want the money. I only did my duty."

But his employer would not listen to this, and after repeated urgings the boy was induced to accept the check.

It was now within a week of the eventful day, and Jerry began to anticipate the pleasures of the occasion. He wrote and dispatched four invitations to as many of his former schoolmates, and Ellen also solicited the presence at the dinner of three of her girl fellow-pupils of a year ago.

Two evenings after that, about the time for closing, Jerry was attending to some duties at the rear of the store, when he noticed two rough-looking men standing on the corner of the alley, intently watching the premises. Their forms seemed familiar, and their attitude suspicious, but the dusk hid their features from view. Hurriedly going to the front of the store, without mentioning his suspicions to any one, he took a circuitous route, drew up his coat-collar, pulled his hat over his eyes, and soon reached the location where the men were standing. As he passed them, almost on the run, to divert suspicion, he cast a furtive glance at their faces, and at once recognized his previous assailants. Jerry was now satisfied that a burglary was contemplated by the rascals, and redoubling his steps, soon re-entered the store. Happily, Mr. Stillman was in his office, and to him the boy, in a few hurried words, communicated his suspicions.

"I am sure," he said, "that these men mean to break into the store to-night, and I feel it my duty to warn you of their intentions."

His employer manifested no surprise at Jerry's words, after learning that the men were identical with those who had attempted the robbery, but he was profuse in his thanks, directed Jerry to observe reticence in the matter, and at once sent a messenger to police headquarters, who shortly returned with four stalwart officers, fully armed. These, with the regular watchman, made preparations to give the burglars a warm reception.

The events of the preceding hour had so excited Jerry that instead of his ordinary quiet and bashful manner he became restless and loquacious, expressing a desire to remain in the store and witness the capture of the burglars if they attempted an entrance. But his wish was ungratified, for Mr. Stillman ordered all hands to leave, and soon the premises were untenanted save by the five guardians of the peace.

When Jerry reached the store next morning he was not at all surprised to learn that his suspicions were fully confirmed. Entrance to the building had been attempted shortly before midnight, and the burglars were captured after a desperate resistance and locked up to await trial.

When the case was called in the courts, a month or two afterward, Jerry was summoned to the stand as the principal witness in the assault upon him, which took precedence of the later charge. He related his story so coherently and intelligently, and when cross-examined by the attorney for the defendants adhered to his statement so persistently, notwithstanding the former's studied efforts to confuse him, that he was the recipient of lavish encomiums from the newspapers, which termed him "a young hero," "a gallant preserver of his employer's property," etc.

The men were promptly convicted on the first charge, and the evidence of the officers on the second was so conclusive that they were as readily adjudged guilty. Their combined sentences amounted to 20 years.

(To be Continued.)

Little Bits of Nature.

The Rooster's Family.

(Written for the RURAL PRESS by NATURAL.)

The queerest little bit of nature is being enacted in this great State of glorious wonders that one would wish to see. In the backyard of a beautiful residence here there is a very high fence inclosing a chicken-yard in which are hens, baby chickens, middle-aged pullets and a few old dowagers, but not one rooster—in fact it is a perfect "Sorosis" for the lady of the house has banished the only male bird outside the confines of the chicken kingdom and given him a brand-new family of little chicks to take care of.

Perhaps you think he scorns such duties, thinking it beneath the dignity of a long-tailed, beautiful red and green, loud-crowing rooster. Not a bit of it. He takes to it as naturally as if it was the whole and original duty for a rooster to scratch and "cluck" and hide the little birds under his wing, which he does with more bluster and fuss than a hen ever thought of. He does not try to scale the walls of his kingdom from which he is banished, although he can see glimpses of the joys within through the insertions between the pickets, or rather slats, of which it is composed.

No, he does his duty manfully—ahem!—womanfully, without deigning to waste a glance at his harem of beauties only separated by one inch of wire and wood, but oh so high; perhaps that is the thought that reconciles him to his present situation.

The visitors were all moralizing on the beau-

ties of accepting with resignation and enthusiasm the position in which one is placed in this world and laughing at and admiring the very charming way in which he called his little charges and would not let them wander a foot from his side, scratching and picking and clucking constantly, not taking the least notice of the visitors who were so admiring him, when a little lady broke the spell by saying with a fine scorn: "He's an old Molly Caudle!"

DOMESTIC ECONOMY.

LEMON DROPS.—Dissolve half a pound pulverized sugar in lemon juice and boil to a thin syrup. Drop on plates and harden in a warm place.

DOUGHNUTS.—To two teacupfuls each of sugar and sour milk, add one teaspoonful of soda, one teaspoonful of butter, two eggs, a pinch of salt, nutmeg to taste, and flour enough to roll without sticking. Fry in hot lard, drain well, and dust with powdered sugar while they are hot.

CURRIED BEEF.—Take slices of cold roast beef, cut them up into small bits, put a large piece of butter into a saucepan and put the meat into it, with two onions, sliced very thin, a little water, one dessertspoonful of curry powder. Let this simmer for 10 or 15 minutes. Line an earthen vegetable dish with boiled rice and pour the curried beef into it. Serve hot.

BAKED POTATOES.—Potatoes that are to be baked should be thoroughly washed and dried, then placed in a moderately warm oven, either in a baking tin or on the grate. If the oven is at the right temperature, potatoes will bake in from 40 to 50 minutes. If they cannot be served as soon as done, gently break the skin and they can be kept in tolerable condition for a short time.

SAGO CUSTARD.—Sago custard, which is both nourishing and palatable, is made by soaking two tablespoonfuls of sago in a half pint of cold water for an hour and a half, then boil it in the water until it looks clear; then add a tumbler of fresh milk, let this boil for a minute or two, add sugar to your taste, and when you remove it from the fire add one well-beaten egg and flavoring to your taste.

TO STUFF PIGEONS.—For one dozen pigeons take two cups stale breadcrumbs, two teaspoonfuls of sweet marjoram, one of pepper, two of salt, one of cloves, one onion chopped fine, a little salt pork chopped and one or two eggs. Mix this up well. Stuff the body and sew them up, then boil them slowly until tender. Brown them in butter in a frying-pan, dredge flour over them to make them brown well, and add a little liquor they were boiled in, after taking the pigeons out. This will make a nice gravy.

CHICKEN PIE.—Take boiled chicken, either freshly cooked or cold, and lay it in pieces in a deep baking dish which has been previously lined at the sides with nice piecrust. Dredge flour over the meat and add salt and pepper, then another layer of chicken, and proceed as before until the dish is filled. Pour in some of the gravy or broth, put bits of butter on top and cover with a rich paste, which may be ornamented with fanciful devices in leaves and scrolls, according to taste. Be sure that an opening is left in the top for the steam to escape while baking.

APPLE SAGO PUDDING.—Pare and core a half-dozen sour, juicy apples and arrange them in a buttered pudding dish; fill up the hollow of each apple with sugar and put a bit of butter on top. Cover the dish closely and set in oven to bake till the apples are thoroughly done. Meanwhile boil in a double kettle a scant cup of sago with two cups of water and a little salt. When done, which may be seen by the transparent, jelly-like look of the sago and by the taste, beat in lump of butter, sugar to taste, and flavoring if desired. Pour the sago over the cooked apples in the pudding dish and set back in the oven to brown on the top.

CRANBERRY SAUCE.—If cranberries are to be served with turkey or game, cook them in this way: To one pound of cranberries, after they are picked over and washed, allow one pound of granulated sugar and half a pint of water. Put the sugar and water into a porcelain kettle and let it come to a boil; then put the berries in. After they begin to boil, allow full 10 minutes for boiling. Then pour all into a mold which you have dipped into cold water. This will prevent the jelly from sticking to the mold. Let it stand all night or longer. It will turn out like jelly, and it will be found to be sweet and yet tart. A larger quantity may be prepared, as it will keep as well as any jelly.

HOMEMADE CREAM CANDY.—To coffee cup of white sugar add two tablespoonfuls of water to dissolve it, and boil, without stirring, in a bright tin pan, until it will crisp in water like molasses candy. Just before it is done, put in a teaspoonful of vanilla or lemon, or peppermint essence, and a quarter of a teaspoonful of cream tartar. When done, pour out into a buttered pan, and when cool enough to handle, work as you would molasses candy until it is perfectly white; then stretch and lay on a board, and with chopping-knife cut into mouthfuls, or you can cut with shears, and lay on buttered paper on a plate. Grease your hands with butter before working it, and it will not stick to your fingers. Granulated sugar is not as good as other white sugar.

The Week.

The weather as we write approaches the torrid and will serve a good purpose in hastening the early fruit, which is rather tardy this year. We hear that one Vacaville grower expects to ship cherries on April 21st, which is about 20 days later than the extreme early date of March 31st which was made one year. Fruit reports are as yet somewhat uncertain. Apricots on old trees are rather lighter than usual, but younger trees are doing well generally. The peach outlook in the leading regions indicates that the driers will have their hands full again this year. Doubling, tripling, and even quadrupling of peaches is an indication of exuberance which does not delight the grower, and it seems unusually prevalent this year in some parts.

Hay crops have made great progress during the week. Some reports from grain districts speak of rather a thin and backward stand in the fields. Much depends on what rain is still

in store for the season. If but little is given, there will be some rather short fields.

General activity in real estate and improvements continues; the valleys hum and the hills resound with the music of the boomer, and the victims are the most contented martyrs living. It is reported that the Southern Pacific system did a business of two and a half million dollars in March, a great increase over the corresponding month last year. This shows that people, goods and produce are moving about at a lively rate, and this means business and prosperity.

Intermediate Sentences.

The question of punishment for crime by incarceration and restraint is very properly assuming more than usual prominence. There is no fact more patent than the unfair discriminations made in the infliction of punishment for various grades of offenses. Only recently a Kentucky sheriff conducted at the same time two prisoners to the penitentiary, one for the theft of a melon and the other for killing a man. The sentence of the thief was for three years, on the murderer but two. Now under our present judicial system it is practically impossible to prevent such a paradox of justice. It is a marvel that the ingenuity of our law-makers has not devised some plan to remedy this evil. The plan proposed at the last session of the Wisconsin Legislature is worthy of respectful consideration. It provides that the court sentence the offenders indeterminately. The judge pronounces the sentence and transmits to the prison authorities an outline of the offense and a brief biography of the convicted man. With this data those in charge of the penal institution are enabled to form an intelligent estimate of the character of the man, the probability of his reformation and gain some idea of the best way of dealing with him. If it is his first offense, every opportunity is to be afforded him to work out an honorable reformation, and to this end he is given to understand that honorable and honest conduct will not only greatly hasten the date of his discharge, but earn for him every consideration possible while confined within the walls of the prison. It is believed that such a course will induce all, or nearly all, to attempt to regain a place in their own self respect, and in the esteem and confidence of their fellow-men. It certainly appears reasonable to hope that if a spark of manhood and sense of honor remains it would be kindled into a generous glow under such conditions. If a man, through bad associates or under an impulse of great provocation, burns a house or perpetrates some act of mischief and is sent to prison for the crime, he is not made to feel that nothing but an endless disgrace remains. He is to be encouraged to make an effort to regain his lost estate, and the discipline and whole atmosphere of the prison is to be conducive to that end.

Now to develop this idea it is proposed that all sentences except those for life shall be left indeterminate. If the convicted shall evince no desire for reformation, but shall continue wicked and vicious, let the restraint continue. Society can well afford to keep such incorrigibles out of harm's way. But, on the other hand, should the criminal under these incentives show a disposition to do right, he should be met by the prison officials with every possible needed help. A system of promotion may be adopted. At a certain degree of promotion the convict should be entitled to wear citizen's clothes, and a certain degree of further promotion should entitle him to his freedom to go out of the prison, with the right to his earnings to be given him at the time of his discharge. The idea is to save every man possible to society and to his family, and at the same time effectively protect society from the absolutely depraved and vicious.

FRUIT-GROWERS' CONVENTION.—According to telegrams received, the fruit-growers are having an interesting meeting at Santa Barbara this week. We expect to begin our reports of the Convention in our next issue.

The Fruit Auction is to be Tried.

On another page of this issue we print statements from Californian and Eastern parties concerning the opposition to the auction sale of California fruit in Chicago. The statements made are interesting, though, of course, some of the points advanced are open to controversy.

We are glad to be able to announce that a meeting of the directors of the Fruit Union was held in this city on Tuesday, at which a full board was present. After a full discussion of the auction plan, the following resolution was adopted by a two-thirds' vote:

Resolved, That until further notice, all shipments of fruit made by the California Fruit Union to Chicago this season, be sold at public auction.

The trial of the auction plan thus ordered, if made in good faith, as we have no reason to doubt that it will be, will be satisfactory to the greater number of the stockholders of the Union. We understand that negotiations are pending for the securing proper facilities for holding the sales, and that it is possible that some of the competing railways from the Missouri river to Chicago may assist materially in securing desirable accommodations.

Mr. A. T. Hatch, now Eastern manager of the Union, expects to start for the East May 3d, to arrange for this year's business. It is probable that with a few exceptions the agents who handled the Union's fruit last season may act again this year.

The Beet-Sugar Enterprise.

The interest in the beet-sugar enterprise at Watsonville is shown in the fact, as stated by the *Pajaronian*, that the notification of the Western Beet Sugar Co. that it was ready to distribute seed must have reached nearly every contractor, for with less than a half-dozen exceptions they were all on hand to get their supply. The seed came in sacks, each containing 100 pounds, and was rapidly distributed. Many farmers having increased their original contracts after the seed had been parceled out, another lot of seed will be sent to supply their wants. There will be seed for all.

It is stated that about a third of the machinery ordered from Germany is on the ground. The foundation will be completed next week, and the corner-stone of the factory will be laid on Saturday, April 14th. The directors propose to have the ceremonies attending the corner-stone laying of a character in consonance with the importance and magnitude of the enterprise they are establishing. The *Pajaronian* says the directors of the company will go to Watsonville in a body, and it is desired that the citizens of Watsonville and Pajaro valley turn out in mass and participate in the ceremonies. The ceremonies will be in the hands of the directors of the company and the citizens—a simple yet impressive dedication by the projectors of this enterprise, aided by the farmers whose labors in intelligently cultivating the soil will be expected to complete the successful introduction of sugar beet cultivation and processing.

THE proposition to elect United States Senators by a direct vote of the people is not new. Hence there is nothing novel or startling in the joint resolution of the House in favor of a constitutional amendment to bring this into effect. Such a scheme as this, as well as one to have the President and Vice-President chosen by popular vote, has often been agitated by practical statesmen, and much can be said in favor of each proposition. It would be more in accordance with the democratic spirit of our institutions.

Those who have read the history of the constitutional convention know there was a strong party in it that was not fully weaned from monarchy, a party headed by Hamilton that was afraid of the people, and our Senate and the anomalous system of electing a President and Vice-President is the result. Still there does not seem to be much chance for the adoption of either scheme at present, nor is it quite certain that the country is ripe for any radical change in the system devised by the framers of the Constitution. It is possible that wrongs are often done, and that potent evil influences may find a lurking-place in our present system, but on the whole there appears to be more safety in adhering to it

than can be secured by change. In this case it may be well to remember the old adage to let well enough alone.

Wholesome Boom Agencies.

The specimens of California's products and scenery, displayed at the rooms of the State Board of Trade in this city, continue to interest many visitors from near and far. A glance at their register Wednesday afternoon showed three or four foolscap pages of names inscribed the present week, some of the persons hailing from our own State, others from Missouri and Texas, Illinois, Ohio, Pennsylvania, New York, Vermont, Massachusetts, Maine, and even Manchester, England.

The exhibits from the various affiliated counties have been gradually enlarging their bounds, until there is none too much room for guests to move about as they inspect the sheaves of cereals, the ears of maize, the spuds and squashes, the jars of grain and pulse, the cans of hermetically preserved and boxes of fine evaporated and glace fruits, and sets of photographic views, so varied in their attractions.

Since our last previous call the handsome pyramid of choice dried fruits, raisins, and nuts from Fresno, tastefully arranged under glass, with gilded frame-work, has been brought in—an elegant addition. The figs look nearly equal to the best imported Smyrna.

What with the pleasant memories and local literature carried away from these rooms by the many tourists, immigration is not likely to slacken the coming season.

At Sacramento, too, the city and county Improvement Association has just reared an exposition building of circular form and 60 feet diameter, in which they mean to keep up a sample display of the products of Central and Northern California. The site of the building is close by the passenger depot, on grounds which are being rapidly beautified with trees, shrubbery and fountains, and the association intends it shall become the headquarters where new-comers to this railroad center can procure all necessary information as to the counties in this part of the State. It is to be put in charge of a competent person, whose duty it will be to meet visitors, answer questions and impart such information as may be desired.

Sixteen interior counties, lying between the Stanislaus river on the south and Mt. Shasta on the north, have been requested to send representatives to choose and organize a board of managers for the permanent exposition, and several of them are already moving in the matter.

Such agencies as these at the metropolis and at the capital must surely prove of great service in furthering the country's healthy settlement and real prosperity.

WHAT THE CATTLEMEN WANT.—At a convention of cattlemen held recently in Denver, there were present representatives of the great range interest all the way from the Mississippi river to the Pacific Coast. Among resolutions adopted at the meeting were the following: Asking Congress to at once provide measures to secure a sea channel at some point on the Texas coast, and demanding the various railroads carrying beeves to market from the range country to give the members of the International Association the benefits of the improved stock-cars now offered, thereby reducing shrinkage as well as doing a humane act. Also a reduction of rates in proportion to the decline of the prices realized. The resolution requests every rangeman to patronize the road first adopting these cars; also a resolution urging Congress to take off all duties on cattle and beeves imported from Mexico.

A LOCAL HABITATION AS WELL AS A NAME.

We are pleased to see that an esteemed contributor of the *RURAL* has found one place in California better than all the rest. This fact, applied broadly to the surface of the earth, is, we are told, the basis of civilization. We trust the new enterprise may bring our friend much comfort. The *Placer Argus* says: "Mrs. Lillian H. Shuey, an author of repute and a former resident of this county, has just bought five acres of land from the Orisman farm, at the Junction place, for \$120 per acre. She expects to build shortly."

COUNTERFEIT DOLLARS, very well executed, but a trifle thicker than the genuine coin, are in circulation in the northern portion of the State.

The *Icerya* Not Found in the East.

[Written for the RURAL PRESS by D. W. COQUILLET, Los Angeles.]

Quite a number of different persons have remarked to me that our *Icerya* also occurs in the eastern part of this country, saying that they saw it on maple and other ornamental trees. These were clearly cases of mistaken identity, since our *Icerya* is not known to occur in any portion of the United States outside of California, although it has recently been found in Mexico. The scale insect that is thus mistaken for the *Icerya* is the maple scale (*Pulvinaria innumerabilis*), which is found in this country from the Atlantic to the Pacific, and infests quite a number of different kinds of deciduous trees and plants, such as the soft maple, osage orange, grape, etc. Like the *Icerya*, it secretes a mass of cottony matter, in which the eggs are deposited, and the resemblance between the adult females of these two species is sufficiently great to cause a casual observer to mistake one for the other, as will be seen by reference to the accompanying figures.

The differences existing between these two species, however, is so marked that a slight examination will be sufficient to distinguish the one from the other. The body of the adult maple scale has a deep notch or cleft behind, while that of the *Icerya* is destitute of such a notch or cleft, being either rounded or with numerous rounded scallops. The legs of the *Icerya* are long and well developed, while those of the maple scale are very small and hardly perceptible. But perhaps the easiest character by which these two species may be separated is to be found in the structure of the cottony egg masses or nests; that of the *Icerya* is of a firm, close texture, and is ribbed, or fluted, while that of the maple scale is loose and flossy, not ribbed or fluted, and the threads of which it is composed may be drawn out like those of a spider's web, and readily adhere to any object with which they come in contact.

While there are three or four generations of the *Icerya* produced in the course of a year, the maple scale produces only one annual generation. The eggs are deposited in early summer and hatch out in the course of a few weeks; the insects become fully grown in the autumn and hibernate on the trees to deposit their eggs early in the following summer.

The maple scale is occasionally found in this State on grapevines, and I have seen parts of vines as thickly covered with them as the piece of orange branch is with the *Icerya* in the accompanying figure. They would probably become much more numerous and destructive but for the attacks of internal parasites; I have seen whole colonies where every individual had been thus attacked and killed, and in some of them I counted as many as eight holes out of which this number of chalcid flies had escaped. Several months ago I received specimens of camellia leaves infested with a *Pulvinaria*, which quite closely resembles the maple scale, but is much smaller, and the egg-mass, or nest, is much flatter and more slender than that of the maple scale, measuring only about one-eighth of an inch in width, while that of the maple scale is fully three times as wide. This camellia scale is known as the *Pulvinaria Camellieola*, and, so far as I can learn, has not hitherto been reported as occurring in this country; it is also found in New Zealand, and appears to confine its attack to camellias.

[The too prevalent popular belief that our cottony cushion scale is often seen at the East, makes Mr. Coquillett's statement very timely. We often hear such statements. The mistake is an old one, for when Nicholas Pike, U. S. Consul, saw the *Icerya* in the Mauritius he pronounced it the same he had seen on maples in New Haven. This error occurs in a book written long before the *Icerya* became common in California. We trust Mr. Coquillett's statement and the engravings given herewith will lead to a more general understanding of the distinction between the two species.—EDS. PRESS.]

SUGAR.—It is reported that Claus Spreckels is about to spend several millions in building

the largest sugar refinery in the world in Philadelphia. It is also reported that the Sugar Trust is placing all the stumbling-blocks possible in Mr. Spreckels' way. They call him names, and say he is not honest in his intentions, etc. Mr. Spreckels has apparently gone into a hard place. The beet in the Atlantic cities are not like the sugar beets of California. Mr. Spreckels had better come home and spend his money here, where his enterprise will be appreciated.

Fatal Figures.

It is reported by telegraph that the Washington freetraders will probably succeed in unseating the statistician of the Department of Agriculture, Hon. J. R. Dodge, because he has authoritatively published figures which show

THE COTTONY MAPLE SCALE—*Pulvinaria innumerabilis*.

that American industry has flourished under protective tariff laws. The claim is that the Republicans have used Mr. Dodge's figures as a campaign document, and, therefore, Mr. Dodge must go hence. This is probably all well enough from a political point of view. Mr. Cleveland would naturally want some one in the statistical department who can figure out what a great advantage free trade will be to American industry, so it can be used as a campaign document by his party.

We utterly and indescribably tire of this matter. As we have often said, this springing

the scope and usefulness of the fair, but the proposition was voted down by a majority, who thought they had a good enough thing as it was. The result has been the organization of the new association.

MISREPRESENTATIONS CORRECTED.—We note in the *Detroit Commercial Advertiser* of March 1st a letter from J. S. Tibbits of Santa Rita, Cal., in reply to the misrepresentations of some tourist who wrote from here. We have no space to reproduce the letter nor the many others of similar tenor which we see in Eastern

THE COTTONY CUSHION SCALE—*Icerya Purchasi*.

of the tariff issue on the country on the eve of a presidential election is prompted by no desire for the welfare; it is simply a bold, and as California producers are bound to believe, a most dangerous political movement, which bodes ill by unsettling the whole business of the country.

One of the meanest manifestations of partisanship in this movement, however, is the unseating of Mr. Dodge. He has had charge of the statistical work of the Department of Agriculture for a score of years or more, and if experience is worth anything anywhere it would be in such a place. It is a sorry day when scientific places are sacrificed to partisanship. We do not think such acts will tend to gain any one popularity.

HOW TO PLANT ASPARAGUS.—In the course of a call with which Mr. E. Leedham of San Luis Obispo favored us a few mornings since, he spoke of the woody and colorless character of most of the asparagus he has noticed in the S. F. market. This he ascribes to the practice of planting it too deep, and avers that if the young plants of a year's growth be set with the crown about two inches below the surface, almost the entire shoot will be tender and better flavored, and instead of appearing in ghastly pallor it will be of a vivid and handsome color.

journals. But it is well to write such letters for Eastern publication. There seems to be a concerted movement among Eastern newspaper publishers to check the growing interest in California, and they are too apt to accept the correspondence of dyspeptic cranks who don't know a good country when they see it. To meet such statements, nothing is more powerful than for California people who may see the representations to write at once to the publishers of these papers, stating the truth, and give the reasons for the love and faith in California which is in them. In this way the correction will reach the same circle of readers before whom the untruth was paraded. Almost every one can do something for California in this regard. The truth is best, and between two truths choose a moderate one. Be sure all statements are well within the facts. A flush California fact is too strong a dose for Eastern comprehension and credulity, as a rule.

MEXICAN ORANGES.—It is reported from Nogales that a firm of fruit-dealers of Chicago have sent an agent to Sonora to purchase from 10,000 to 20,000 acres of land in the vicinity of Hermosillo and Ures. This land will be set out in orange trees.

The Oleomargarine Law Constitutional.

As our readers are aware, a most energetic warfare is being waged against the oleomargarine law before the present session of Congress. The people's representatives are being deluged with evidence of experts that oleo made as it should be is not unwholesome. This much might be taken for granted: The ideal or theoretical oleo is as wholesome as a suet pudding, probably, but what the public have to do with is the actual and the practical oleo, which we do not hear much about. It seems to be the tactics of the oleo people to make such a noise about oleo as it should be that people will take it to mean oleo as it is. We do not believe these tactics will succeed. The dairymen at the East are too wide awake to be caught napping.

The position of the pure dairy products is much strengthened by the decision of the U. S. Supreme Court rendered April 9th, which silences another fallacy of the bogus buttermen. They had set up the claim that the oleomargarine law was in conflict with the Constitution, in that it abridged liberty. In Pennsylvania the case came up and it was decided that the law was constitutional. The case was carried then by the oleo people to the U. S. Supreme Court and argued by them for all or for more than it was worth, to no purpose, for the higher court affirms the judgment of the lower.

The Pennsylvania law is one of the most radical of all the State laws on this subject. It is practically prohibitory, in that it makes it unlawful for any person to manufacture, sell or offer for sale, any butter or cheese, or article designed to take the place of these articles, produced from any compound other than unadulterated milk or cream.

This prohibitory law was first enacted in Missouri, if we remember correctly, and has been since placed in the statute-books of several States, though others, like California, were content to enact a statute that nothing of the kind could be sold without conspicuous notice stating the fact.

In the case just decided by the U. S. Supreme Court the appellant was convicted of violating the Pennsylvania prohibitory law, and took appeal to the U. S. Court, basing it on the ground that the statute was in violation of the Fourteenth Amendment to the Constitution, and that the article was an invention not deleterious to the public health. The Court holds that

it is entirely within the police powers of the State to protect the public health, and that the question whether the manufacture of oleomargarine is or may be conducted in such a way as to involve such danger to the public health as to require the suppression of its business, rather than its regulation, are questions of fact and of public policy which belong to the legislative department to determine. If all that can be

said of this legislation is that it is unwise or unnecessarily oppressive, the appeal is to the Legislature or to the ballot-box, not to the judiciary. The Court also says it cannot assent to the argument that, if this statute is sustained, then nothing stands in the way of the destruction by the legislative department of the constitutional guaranties of liberty and property. In answer to this argument, it holds that the judiciary department is bound not to give effect to statutory enactments that are plainly forbidden by the Constitution. The objection that the statute denies the equal protection of the laws is also held to be untenable, for the reason that the same penalties and burdens are imposed upon all persons engaged in the same business.

This decision of the U. S. Supreme Court will be of inestimable value to the legitimate dairy interest. If the present law in any State should be inadequate, the prohibitory law can be enacted, and if the evil should become too threatening, the United States can surely enact a general law in a line which its own highest court has already pronounced in harmony with the Constitution.

AND now the Danish Government forbids the importation of raw hog-products.

FRUIT MARKETING.

A Stockholder's Views.

We have alluded recently in general terms to the replies received from stockholders of the Fruit Union to the circular asking opinions as to the advisability of selling fruit by auction at the East. The following, which is a sort of "open letter" on the subject, is published by Gilbert Tompkins in the San Leandro Reporter of March 31st:

A circular letter has been received from the office of the Fruit Union, stating that there is some opposition to the establishing the auction system of selling California fruit in Chicago. The reasons given for the opposition are very thin, with one exception—and that is the very substantial flesh and blood personality of Washington Porter. It is also stated that the directors of the Union are unable to agree on the question, and the circular referred to is sent out largely with a view to getting an expression of opinion from members of the Union. And they will get it; for if the whole State doesn't "get up and holler" at the idea of again putting their hard-earned coin into the capacious pockets of Mr. Porter, it isn't half the State we have always considered it.

Two years ago, when the Union had just got on its feet, Mr. Porter was given the absolute control of all fruit shipped east of the Missouri river. In return he agreed to divert the cars to the best markets, select agents whom he knew to be trustworthy, and distribute the fruit far and wide. It was an awfully good bargain for Mr. Porter, and was the best that the Union could do under the circumstances. If the agreement had been carried out, the producers would have made money, and Mr. Porter would have made more in the first five years of the contract—supposing him to have treated us fairly, and thus gained a renewal of the same—than he has made or ever will make in the rest of his financially successful life.

Let us see how he kept his promises. There were two organizations in the field that year—the Union and the Fruit-Growers' Association. The last-named shipped large trainloads of fruit to Chicago. Instead of diverting the fruit sent by the Union to other markets where it would have brought at least enough to pay freight, Mr. Porter let the whole business come to Chicago, and culled out the choice packages for Dudley, Clapp & Doe of New York—letting the latter firm buy at a low uniform rate, and giving them a monopoly of the New York markets; then Porter took the fruit that remained and banged it over the heads of the agents of the rival association.

He undoubtedly made it lively for these same agents; but we furnished the ammunition and he took the scalps.

We didn't feel quite equal to fighting our old agent last year, and Porter Brothers Company again handled the fruit. The rival associations at this end of the line had buried the hatchet, and our general manager at Sacramento distributed the fruit to the best of his ability.

The business was far more satisfactory than it had been, and the auction plan, as practiced in New York and Boston, was far better than the old commission—robbery, one is almost tempted to say. The results were told at the annual meeting of the union that was held last January, and a resolution was adopted, declaring that the sense of the meeting was that the auction system should be established in Chicago during the coming season. That this will be done is now an assured fact; strange as it may seem, Mr. Porter himself has furnished the "clinch."

He seems to have forgotten that the agent of the union in one place had no right to be its enemy in another; and when he boasts that he sold Dudley, Clapp & Doe fruit to the value of \$140,000, all of which he knew would be used to break down the auction plan and give it a bad name among the members of the union, he drove a 20-penny spike into the coffin of the old highway-robbery system of selling California fruit in the Eastern markets.

What the New York Agents Think of the Circular.

The Sacramento Bee publishes the following as a letter from Sgobel & Day of New York, who were agents last year of the California Fruit Union:

Mr. Porter claims to have sold \$140,000 worth of California fruit last season at private sale to Dudley, Clapp & Doe of New York, while we sold at auction only \$50,000 worth. Our answer to that is that we sold all that was sent to sell, and could have sold five times as much at the same prices. The same people who deal in California fruit here, or nine-tenths of them, deal in Sicily fruit and are at our auctions every day at 12 o'clock, so there was no inconvenience or loss of time to them such as Mr. Porter claims against the auction system.

Mr. Porter says that "if a dealer wanted 25 or 30 boxes and went to auction to buy them, he would lose his time and then be able to buy only from a sample which might not represent the real quality of the fruit." Our answer to this is: He would have lost no time, because the dealer would have been at the auction to buy lemons and oranges, and the samples of California fruit that are brought to the auc-

tion always fairly represent the fruit left on the wharf. Buyers did not send men to the Jersey side, as Mr. Porter claims. Auctioneers sent a clerk instantly with the regular carts that carry fruit. There was no delay to the dealer in getting his fruit, and nine times out of ten it was in his store before 3 P. M., usually by 1 P. M. or 1:30 P. M.

Mr. Porter says that "under these circumstances most dealers were willing to pay more and buy at private sale." This is not so, and Mr. Porter has given a wrong idea. Dudley, Clapp & Doe, Mr. Porter's New York agents, receive their fruit by express from Chicago only; it arrived at midnight and was always in their store at 6 A. M., whereas our fruit almost always reached Jersey City between 8 and 9 o'clock, eight hours behind theirs. Now right there is a contradiction to what Mr. Porter says. The Fruit Union's fruit comes direct from California, while Dudley, Clapp & Doe's comes from Chicago, and though the express fruit reached New York at an earlier hour in the morning, yet it was a day older than ours, which came direct from Sacramento.

Look at Mr. Reed, for instance; he is no fool, but is a bright man who has been in this business for years. He came from California and attended our sales and then went to Boston and did the same, and you now see how he has decided. He is thoroughly satisfied that the auction plan is the only way to get the most money for California fruit and with the least risk.

We read this morning an interview with Washington Porter. It is very annoying to think that such views as he therein expresses are being spread over California when we are not there to contradict them. They are worded in such a manner as to convey an impression entirely different from the true state of things. "New York dealers have their men in Chicago." Why did he say that? Nobody was there but Mr. Clapp, and if the business between Porter Bros. and Dudley, Clapp & Doe was not a joint business account, then we are very much mistaken. They did not in this way often save a full day, because the fruit was bought in Chicago and it had to lie there perhaps 24 hours, while our fruit was coming on there.

We propose to do everything that can be done to make the selling of California fruits in New York a perfect success, but we know that there are only a few who understand the difficulties that we labored under last year with this infernal competition through Chicago cutting our throats the morning of every sale.

California fruit has never sold as low in the past as it was last season, and every effort was made to strangle the Fruit Union in New York in their first season. Profits were no matters of consequence; in fact, our opponents were quite willing to lose a lot of money if they could only prevent the Fruit Union from coming in here.

Dudley, Clapp & Doe sold \$140,000, did they? Well, did any of the California shippers or growers get any profits out of it? Not much. Who did? We leave that for the California fruit people to imagine.

Mr. Porter is said to be a very bright man. He talks very well, and it is quite possible for a man of his skill, in conversing with or presenting his views to a lot of fruitmen several thousand miles away from the place where their fruit is sold, to thoroughly impress upon their minds his own ideas.

If we could have the same people here for 24 hours and show them the whole thing, they would sweep away his views like cobwebs.

We have been informed from reliable authority that Dudley, Clapp & Doe received from Porter Bros., in Chicago, 35 carloads for the season, all selected choice fruit. Now allowing \$2000 per car, this would make only \$70,000. Where does the \$140,000 come in? Besides, we doubt any \$2000 average per car, as they sold lots of apricots, peaches and pears under our prices.

Population of California.

The national census of 1880 credited this State with a population of 864,694. In 1885 a State census was made by estimate, and this gave California's population to be 1,079,000. The two years since that time have shown the greatest growth and development, in nearly all parts of the State, of any of the seven completed years of the decade. United States Surveyor-General Hammond, from facts and figures secured by him, estimates that on the 1st of the present month California's population was fully 1,350,000, with a floating population in addition of at least 300,000. Taking the census is a little outside the duties of the Surveyor-General, but in making up his annual report in November and December last he saw the need of knowing, as nearly as possible, the exact present population, that measures desired of Congress might better be urged, and so he set about securing the needed facts. Statistician Rhodes, employed in the office in this district, was intrusted with the task. All county great registers for recent elections were secured and overhauled, county books of statistics were examined carefully, and besides, circulars asking for latest school census reports were sent to all county school superintendents. From these responses and from all other information accessible careful estimates were made. The result was an estimated population December 1st, last, of 1,250,000.—Evening Bulletin.

THE FIELD.

Wheat.

Wheat is the staple with which California pays for its imported goods. There are other exports, but grain in some form constitutes much the largest item. Yet wheat seems to be the one article of domestic produce which declines in price from year to year. The Liverpool price was lower last year than it had been within 100 years, and at present there does not seem to be much prospect of a better market next year. Our surplus has to go to Liverpool to find buyers. The Eastern States which do not raise their own wheat buy from the States lying between the Mississippi river and the Alleghany mountains. The Pacific Coast surplus is shut out of this market by 3000 miles of land transportation. California wheat landed in New York or Boston by sea would then have to travel into the interior. Consequently the bulk of our surplus, being sent by ship, goes direct to the English market. The depreciation in the price of wheat in the English market is, therefore, a direct loss to the Pacific Coast. We have, in effect, to pay for our European goods with a depreciated currency. While we turn our wheat into cash, and pay cash for goods, more wheat is required to bring a dollar than was the case a few years ago. This fact should be considered by legislators. If we increase our importations, and at the same time suffer a depreciation in the product with which we pay, we are doubly losers. At this period in our industrial development the leading idea should be to foster home industries.

Every case of boots and shoes we make in this State saves importing a case. The wheat that would feed the boot and shoemakers in Europe is consumed by the boot and shoemakers who work in this State. We are saved thereby from the loss consequent upon paying for our importation in low-priced wheat. At the rate manufactures are now increasing in the United States, it will not be long before the Eastern States will need all the surplus of the West. The only American wheat-sellers in the Liverpool market will then be those on the Pacific Coast. Our surplus is larger in proportion to our entire production than is the surplus of other wheat-producing States, and will appear in the foreign market after other States have ceased to export, but the low price of wheat will cause a good deal of wheat land to be given over to other crops. If the tariff tinkers will give our infant manufactures a chance, we shall from year to year import less and produce more. With the surplus of India pouring into the English market, the outlook for a rise in price is not very good. A general European war would, of course, send prices up, but in ordinary times the American wheat-grower, with all his advantages in the way of machinery, will find the cheap-labor countries of Asia and the East of Europe ugly competitors to contend against.—Call.

Wheat-Growing in China.

Wheat-growing is one of the principal industries in the northern and middle parts of China. The winter wheat is planted at about the same time that wheat is planted here. The soil, especially in the northern provinces, is so well worn that it is unfitted for wheat-growing, and the Chinese farmers, appreciating this fact and the fact that all kinds of fertilizers are excessively dear, make the least money do the most good by mixing the seed with finely prepared manure. A man with a basket swung upon the shoulder follows the plow and plants the mixture in large handfuls in the furrows, so that when the crop grows up it looks like young celery. Immediately after the first melting of snow, and when the ground has become sufficiently hardened by frost, these wheat-fields are turned into pastures, under the theory that by a timely clipping of the tops of these plants the crops will grow up with additional strength in the spring. Wheat-threshing is the principal interest in Chinese farming. Owing to the scarcity of fuel the wheat is pulled up usually by the root, bundled in sheaves and carted to the "mien chong," a smooth and hardened space of ground near the home of the farmer. The tops of the sheaves are then clipped off by a hand-machine. The wheat is thus left in the "mien chong" to dry, while the headless sheaves are piled in a heap for fuel or thatching. When the wheat is thoroughly dry it is beaten under a great stone roller pulled by horses, while the places thus rolled over are constantly tossed over with pitchforks. The stalks left untouched by the roller are thrashed with flails by women and boys.

The beaten stalks and straws are then taken out by an ingenious manipulation of pitchforks, and the chaff is removed by a systematic tossing of the grain into the air until the wind blows every particle of chaff or dust out of the wheat. Even the chaff is carefully swept up and stowed away for fuel or other useful purposes, such as stuffing mattresses or pillows. After the wheat is allowed to dry a few hours in the burning sun it is stowed away in airy bamboo bins. The milling process is very ancient. Two round, large bluestone wheels, with grooves neatly cut in the faces on one side and in the center of the lower a solid wooden plug, are used. The process of making flour

out of wheat by this machinery is called "moh mien." Usually a horse or mule is employed. The poor, having no animals, grind the grain themselves. Three distinct grades of flour are thus produced. The "shon mein," or A grade, is the first siftings; the "nee mein," or second grade, is the grindings of the rough leavings from the first siftings, which is of a darker and reddish color than the first grade; the last grade, or "mo D," is the finely ground last siftings of all the grades. When bread is made from this grade it resembles rough gingerbread. This is usually the food of the poorest families. The bread of the Chinese is usually fermented and then steamed. Only a very small quantity is baked in ovens. But the staple articles of food in Northern China are corn, millet and sweet potatoes. Wheat and rice are the food of the rich, while the middle classes of the Empire eat millet and rice. In the southern provinces the entire breadstuff is rice.

THE WHEAT CROP OF THE WORLD.—The total wheat crop of the world is 2,000,000,000 bushels, and at least 1,500,000,000 bushels are consumed in the countries in which it is grown, leaving a balance of 500,000,000 to supply countries growing no wheat or growing less than they consume. Speculation deals only with this balance that goes into general trade, and the speculators of the world in a single year will sell or transfer in their peculiar way 40 or 50 times 500,000,000 bushels of wheat. In New York a single day sometimes witnesses a sale or transfer of 30,000,000 bushels of wheat. The damage done by speculation consists in lowering the price of the whole amount of actual wheat by its enormous inflation of "paper wheat," not a bushel in a thousand of which is ever delivered.

WHEAT SHIPMENTS FROM CALIFORNIA.—Preliminary statements of foreign commerce for the month of January show that at that time more than half of the quantity of wheat exported went from the Pacific Coast. This is stated at 1,379,773 bushels, the total exports of wheat for the month from the entire country being only 2,662,097 bushels, as against over 8,000,000 bushels for the preceding month. The *Commercial Bulletin*, reviewing the wheat exports, says: "Once more the Atlantic speculators are giving the full control of the foreign markets to producers and dealers of other countries and of the Pacific Coast, and as a consequence the grain from the Atlantic States has accumulated in vast quantities unsold."

THE FLOURING INTERESTS of the country are considerably larger than the sugar interests, which has recently attracted much attention in connection with the proposed modification of the tariff. More capital is tied up in the plants, and the per capita consumption of flour is largely in excess of that of sugar. In other words, the amount of money handled in the flouring business is much larger than in the sugar trade, but it is not so concentrated.

VALUABLE PUBLICATIONS.—We acknowledge the receipt from the American Public Health Association of a set of "Lomb Prize Essays," which are the fruits of a generous offer of Henry Lomb, Esq., of Rochester, N. Y., of prizes for the following subjects: "Healthy Homes and Food for the Working Classes;" "The Sanitary Conditions and Necessities of Schoolhouses and School Life;" "Disinfection and Individual Prophylaxis Against Infectious Diseases;" "The Preventable Causes of Disease, Injury and Death in American Manufactories and Workshops, and the Best Means and Appliances for Preventing and Avoiding Them." They are an admirable series of essays and should be in the possession of every one interested in the preservation of the public health. Prices: No. 1, 10 cents; No. 2, 3 and 4, 5 cents each. In book form, well bound in cloth, 50 cents. To be had by addressing Dr. Irving A. Watson, Secretary American Public Health Association, Concord, N. H. For the coming year Mr. Lomb offers two prizes on the following subject: "Practical Sanitary and Economic Cooking, Adapted for Persons of Moderate and Small Means." The first prize is \$500, second \$200.

DEATH OF L. B. ARNOLD.—Prof. L. B. Arnold, the well-known lecturer and writer upon dairy topics, died at his home in Rochester, New York, on March 7th, at the age of 74 years. The death of Mr. Arnold and that of X. A. Willard, which occurred a few years ago, remove the two men who figured most prominently in the uprising of commercial dairying in this country. Others furnished the capital and did the work, but they were the exhorters, and in many cases the advisors and guides. Mr. Arnold's teachings were received abroad with marked consideration. In 1885 he was the guest by special invitation of the British Dairymen's Association at a delegate meeting made up of representatives from all the European countries. In this country his honors were many and were merited and modestly worn. Prof. Arnold was a good friend, and his genial, sunny disposition made him a favorite among all who knew him.

A CURIOUS BIRD'S NEST.—Near the town of Soleure, in Switzerland, a bird's nest was recently found which was constructed entirely of the imperfect watch springs thrown out from the workshops. It has been deposited in the local museum.

THE LOUISIANA TRACT!

SITUATE ONE MILE FROM THE FLOURISHING

City of Sacramento,

With a Population of 30,000, and

$\frac{1}{4}$ MILE from Terminus of an ELECTRIC RAILWAY, now in course of construction.

SUBDIVIDED INTO 5-ACRE LOTS.

Soil is Deep and First-Class Fruit Land.

CITRUS AND ALL DECIDUOUS FRUITS, and the choicest of Plants reach the highest state of perfection upon this soil.

30 ACRES OF TRACT IS GOOD ALFALFA LAND, from which three crops a year can be cut. 5 ACRES IN FRUIT, well attended to, will make a handsome income. One Acre in Strawberries will net \$400 a year.

WATER IN ABUNDANCE at a depth of 30 feet. One Windmill, costing \$60, will irrigate five acres.

PRICE FROM \$175 TO \$250 PER ACRE.

TERMS.—One-fourth cash. Deferred payments in five annual installments; interest at 7 per cent, free from taxes. Title perfect.

Healthiest Location and Best Market in the State.

A. S. BALDWIN.

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES
At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

McAFEE BROTHERS, Agents, 10 Montgomery St., San Francisco.

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil. TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for home or quickly paying investments, cannot do better than purchase here. For further information refer to

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land?

DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10-acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

POLE CENTRALLY LOCATED.

ONLY ONE LEVER.

The Plano Manufacturing Co.'s 1888 "Short Stroke" Rustler Chain Power Mower.

A coupling frame complete with only one piece of iron. A perfect floating bar and tilting lever. The best for rough ground. Never chokes or clogs in any grass. Both ends of Cutter Bar carried on wheels. The carrying spring on all 5-foot machines carries the cutting apparatus lightly over the ground and transfers its weight upon the driving wheels. Four foot 3-inch cut, price \$75; 5-foot cut, price \$85. Send for catalogue of Plano Rustler Mowers, Plano Steel Binders, Buckeye Rakes, Knowlton Mowers, Boss Sickle Grinders, etc., to

P. P. MAST & CO., 31 Market St., San Francisco.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

CROPS IN LIVERMORE VALLEY.—*Herald*, April 5: Reports from every section of this valley and surrounding country are to the effect that grain crops never looked better at this time of the year. The stand is everywhere magnificent. There are few needs anywhere, and nowhere is the grain suffering from either lack of or too much moisture. We understand that this season, the grain here is far ahead of that in San Ramon valley, or about Dublin. Many fields are already stood out, with the grain a foot or more in sight.

Butte.

PROSPECTS AT THERMALITO.—*Chico Enterprise*: In company with Col. A. F. Jones we drove over to Thermalito. We were anxious to make a thorough inspection as to the amount of damage done to the young trees in the nursery there by the frosts of last winter, but to our surprise we found the young trees coming out finely. It is true that the most of the trees were stripped of their foliage, and the loss will be about 1 in 40, but we noticed a young and thrifty growth coming out on nearly all of them, which gave us more confidence in the Thermalito orange groves than we had before. The work done at Thermalito is immense. N. W. Winton of Oakland has lately purchased 60 acres, which is being planted to oranges under his own supervision. Altogether there were 103 hands employed on the grounds, 21 cottages erected, the hotel ready for the shingles, Grand avenue and Infirmary avenue graded and planted on either side with ornamental trees. Fresno and Merced avenues, near the river, are being grubbed out, leaving the oaks and pines standing where they do not interfere with driving. A new reservoir, capable of holding 5,000,000 gallons of water, is just completed, and several miles of ditches have been dug and pipes laid. The new hotel will be a comfortable hostelry of 50 rooms.

Colusa.

IRRIGATION DISTRICT ELECTIONS.—*Colusa Sun*, April 7: On Monday there was an election in Central Irrigation district on the question of issuing bonds in the sum of \$750,000 for the construction of the proposed works. The vote at the five precincts stood for the bonds 189, and against the bonds 36—five to one, with nine to spare. Wednesday was the regular day for the election of officers to hold two years. The Directors elected were F. X. St. Louis, H. B. St. Louis, J. A. Sutton, John Durham and H. P. Eikle. The first named three were re-elected. In both the 4th and 5th divisions—Maxwell and Williams—the contest over Director was very exciting. Messrs. DeLappe and Tully, the incumbents, have been more active in the formation of the district than any other two men. After they were elected they worked hard to post themselves on all that pertained to the office, and they made enemies. We should be very sorry indeed for their defeat, were it not for the fact that their successors, Messrs. Durham and Eikle, are earnest irrigators, and men whose characters stand above reproach, and who will push ahead with all the vim and ability at their command. Of the three who were re-elected we have spoken before. They are farmers and first-class men. It is a good Board as it will be constituted. Gen. B. Harden was again elected Treasurer, P. H. Graham Collector and Robt. Welch Assessor. All these gentlemen are thoroughly competent. The district will be in good working order when the Supreme Court declares the law constitutional, and the bonds become salable.

HORTICULTURAL SOCIETY.—*Colusa Sun*, April 7: The meeting was called to order by Vice-Pres. De Jarnatt, who said that it was quite apparent that the interest in horticultural pursuits was on the increase, and that it was encouraging to see such a large number present; that the society was organized for the promotion of horticulture in all of its branches, and no pains would be spared to make each meeting more interesting and instructive than the previous one. John D. Rosenberg, John Sites and Wm. Nickerson were proposed for membership. A. A. Thayer and Shirley Sanders were elected members of the society. F. W. Willis read a paper on "Insect Pests, and Methods of Extermination." It was ordered that the secretary provide copies for publication. L. L. Hick read an interesting paper on "What to Plant," and B. F. Howard followed with a paper entitled "Wants of a Tenant." It was voted that Prof. A. M. Armstrong be invited to read an article on the subject of "Insect Pests" not already treated on by F. W. Willis.

Marina.

THE ROYS' DAIRY.—*San Rafael Journal*, March 29: At the dairy of Roy Bros., Nicasio Station, last week, the herd of cows riveted our attention. It is an open question with the butter-men of this county whether pure or graded stock is the more profitable. The Roys believe in blood. They have several animals whose names are in the American Herd-Book, and each of which cost up in the hundreds, and just as soon as possible they will weed the herd of every animal not thoroughbred. The common idea of the Alderneys is that they are small-bodied, and light but rich milkers. But in the Roy herd there are large pure-blood cows, averaging as large as grade stock, and

they are great milkers and butter-makers. Another specialty on this dairy is the large pan. Two pans hold the milk of 50 cows. Considering what an amount of work they save, it is a wonder that they are not more generally used. Mr. Roy, thinks also, that they give better and more uniform results in cream than can be obtained by the little pans. The large and elegant modern residence on this dairy ranch impresses a visitor with the substantial wealth of our industries, and the advance we have made in the few past years.

Modoc.

NEW DISTRICT TALKED OF.—*Adin Argus*, March 29: Mr. Dixon of Susanville informs us that there has been a move made in Lassen county to have a new agricultural district formed by severing Modoc and Lassen from the 11th district. There are now four counties, all large ones, comprised in the one district. That territory is entirely too large for the mutual benefit and success of the people. Modoc has never, we will say, been represented at any of the district fairs, simply because the distance between here and Quincy is too great. We feel certain that Modoc and Lassen counties will do all in their power to be formed into a separate agricultural district.

BROOM CORN.—*Alturas New Era*: Uncle James Brown, the Davis Creek broom-corn raiser, was in town last Monday. The old gentleman had a load of brooms, which he disposed of to the people. He turns out the handles himself. This is quite an enterprise and it is to be hoped he will meet with great success. He sowed 30 acres to corn last year, and the crop furnished sufficient straw for 1000 brooms, besides seed for another and larger crop.

FROM SOUTH FORK.—*Stephen Booth* of South Fork called at our office on Monday. Mr. B. is a farmer and stockraiser. He owns 160 acres of land, from 30 acres of which he last season cut 60 tons of hay. He has a young orchard, which is thriving. He raises every kind of vegetable. From a crop of cabbages he cleared a large profit last year. During a residence of nine years he has come to the conclusion that "Modoc is a good county; it is improving all the time. I can see no reason for a man of small means to make a failure here. The soil is rich and deep and our water supply inexhaustible."

Monterey.

GRAIN OUTLOOK.—*Salinas Index*, April 5: C. H. King and James Lynn were in town from Kings City, yesterday. They report the prospect splendid for a big harvest in that vicinity this year. Mr. Lynn has 1800 acres in barley and 2200 acres in wheat, all looking fine. Jas. Downing and son have 1000 acres of wheat on Mr. King's ranch, and 1000 acres of wheat on the Dunphy ranch.

Napa.

BARLEY AND WILD OATS.—*Napa Reporter*, April 6: Mrs. Pettingill of White Rock vineyard, near the Soda Springs, bought a bunch of barley stalks to this office yesterday that measured three feet and an inch in height, also a bunch of wild oats 28 inches in height.

PHYLLXERA.—A dispatch from St. Helena, April 21, spoke of there being much indignation among many leading vineyardists at the course pursued by some of their number in having vines diseased with phyllxera carried to the public highway, thence to be packed off by Mongolians. It is correctly argued that the germs of the disease are thus scattered, and serious injury produced. The better class of vineyardists burn their diseased vines on their premises.

CHESTNUTS ON OAKS AGAIN.—In reference to the grafting of Italian chestnut on black oak, by Mr. Hayford of Colfax, mentioned in our Placer county notes a month since, the *Napa Register* observes: In the Redwoods, west of Napa, Mr. Roney two years ago successfully grafted chestnut scions upon live, white and black oak trees. The grafts grew beyond all expectations the first year, but have since failed to keep pace with their promises. It is the opinion of Mr. Coates, a local authority on matters horticultural, that permanent success can never be attained in this effort to make chestnuts grow on oak trees. The one is by nature too foreign to the other to agree to this departure in nut-growing.

Sacramento.

EGGS EXTRAORDINARY.—*Bee*, April 3: A few days ago an old gentleman who resides near Freeport brought to the *Bee* office a monster egg, picked up in the coop of Plymouth Rock hens. This morning, however, N. D. Hack of Freeport brought in a still larger specimen of hen fruit, the product of a common barnyard fowl, and measuring 8½ inches the long way and 7 inches the short way. The egg weighs nine ounces.

San Diego.

THE GREAT FLUME.—*S. F. Chronicle*, April 8: After a year's residence in San Diego, Dr. G. O. Gearn, formerly of this city, arrived here yesterday from his new Southern home. He said: "The great flume enterprise is advancing toward completion rapidly. This piece of work will be 50 miles in length, extending from San Diego up in the mountains to Cuyamaca lake, a snow-water basin capable of supplying a million of people. From this supply-flume pipes will be laid, when the city and 100,000 acres of the mesa roundabout will have an abundance of irrigating facilities. For 10 miles out from the city to La Mesa pipes will be laid, and the other 40 miles will be a ditch and wooden flume. This work embraces 6000 feet

of tunneling. The longest of these tunnels—the Lankarsheim, 1900 feet—was completed last week. The expense has been enormous."

San Bernardino.

ANOTHER BEAR VALLEY RESERVOIR.—*San Bernardino Index*, April 7: Engineer Frank Brown has made several tours over the valley, and concluded that another monster reservoir can be constructed below the present one, without interference, and be the means of supplying water for a section heretofore supposed to be out of the reach of that necessity to the advancement of a country. Having interested a number of capitalists of this city in the project, he yesterday left for the place, accompanied by the gentlemen in question, and a thorough examination of the proposed scheme will be made. In case it looks feasible the work of constructing a dam for the reservoir will be begun at a very early day.

San Joaquin.

LODI MELONS.—*Sentinel*, April 7: Melon-raisers will commence planting next week, and work, from the date of planting till the last melons are picked in the fall, will be their portion. From a prominent rancher who is engaged in this business, we learned that melons will be planted this season in the vicinity of Lodi by different parties as follows: [Fourteen persons and firms named with a total of 1150 acres.] There may be others who intend planting, but our informant had not yet been apprised of the fact.

Santa Clara.

MILPITAS NOTES.—*San Jose Herald*, April 9: Potatoes and peas are now being shipped from here in abundance, two carloads daily this week, which will increase to three, four, five and six carloads the balance of the season. Wm. Murphy has added a number of pear, plum, walnut and apricot trees to his already large orchard. Charles Cropley has planted 1000 raspberries and 1000 blackberries on his ranch on the Alviso road. S. F. Ayer has planted a number of fruit trees of various species. In nearly every orchard signs of improvement and advancement are apparent.

Shasta.

ORANGE CULTURE ASSOCIATION.—*Free Press*, April 7: The stockholders of the Redding Orange Culture Association held their yearly meeting last Thursday evening and elected the following Board of Directors: R. Bostwick, S. J. R. Gilbert, D. N. Honn, J. H. Miller and Fred Grotefend. Cuts were drawn for long and short terms, and Bostwick, Gilbert and Honn were selected to serve for two years and Miller and Grotefend for one year. The Board then elected officers for the ensuing year: R. Bostwick, Pres.; J. H. Miller, V. P.; J. I. Honn, Sec.; Fred Grotefend, Treas. F. P. Primm was appointed attorney for the corporation. The report of S. J. R. Gilbert, the retiring President, was substantially as follows: That the Directors of the Association, after viewing the several tracts of land offered to the Association, decided to accept the 40 acres donated by J. W. Armstrong and the 80 by D. N. Honn. The 40 acres have been mostly cleared and fenced, 10 acres of which have been set out in nearly 1000 fruit trees, about one-half of which are Bartlett pears, and the remainder peach, French prune, apple, orange and apricot. The amount of money expended so far is \$758 70. All of the stockholders have paid their monthly assessments and the association is in a prosperous condition.

Solano.

CANNERY PROJECT.—*Vacaville dispatch*, April 7: At a meeting of citizens held here today to organize a cannery, Gen. Rusk offered to take \$20,000 worth of the stock. It is proposed to organize with a capital of \$60,000. It is thought that \$40,000 will readily be taken by the fruit-growers.

Sonoma.

FRUIT TREES PLANTED.—*Cor. Chronicle*: Luther Barbank, after a careful estimate, says the following is a fair and close approximate of the different varieties of trees planted in Sonoma county during the year 1887: Olives, 20,000 trees; apples, 12,000; pears, 30,000; plums, 6000; prunes, 15,000; cherries, 6000; apricots, 4000; peaches, 25,000; nuts, mostly walnuts and chestnuts, 15,000. These figures do not include old orchards, most prominent among which is Warren Dutton's prune orchard of 20,000 trees, situated one-half mile from Santa Rosa. The Swiss-Italian colony near Healdsburg has also a very extensive orchard. Prune trees were in such demand that the supply failed or the acreage would have been greatly increased.

Sutter.

CANNERY MEETING.—*Sutter Farmer*, April 6: The meeting of the stockholders of the Sutter Canning & Packing Co. on Monday last was largely attended, and its business was conducted with the utmost harmony, faith and enthusiasm. The venture had its beginning less than four years ago, and the stockholders paid in, all told, about \$19,000. For this outlay they have to show in money and property about \$24,000. The gain shows from six to seven per cent on the money invested since paid in, running from 2½ to four years. During the time the cannery stood idle one year for want of fruit, and the profits of two years' run were more than swallowed up by interest, experiments and other losses. The earnings of last year (1887) were so large as to raise the income for the entire period to commercial rate of interest. This is a condition of affairs most

flattering to directors, managers and stockholders.... The success and the effect are a marvel. The capacity of the cannery is being more than doubled, and another is in course of construction in Marysville. The stockholders closed their deliberations by very properly re-electing their old Board of Directors to serve another year, viz.: J. C. Gray, B. F. Walton, S. J. Stabler, R. C. Kells, H. Luther, G. F. Starr and J. B. Wilkie.

Tulare.

FIG-PLANTING ON A LARGE SCALE.—*Delano Courier*: The faith in fig culture is spreading everywhere in this vicinity, and Mr. M. F. Scott has decided to put in 160 acres of his large White River ranch in the best figs he can procure. Mr. Scott is of the practical mind and instead of inquiring from those that have trees to sell, he has gone direct to those who have made a success of the business. He has thus procured several thousand white fig trees from Downey and is now preparing the ground for the same. Mr. Scott's ranch is situated on the sink of White river, and every one acquainted with this district knows of its unsurpassed soil and choice location. The varieties chosen by Mr. Scott are principally those suitable for drying and crystallizing, and the quantity set out will necessitate an exclusive drying and manufacturing establishment in a very few years. This fig orchard is the largest so far planted in the State.

Ventura.

EDITORS PRESS.—*Montalvo* is beautifully located in the heart of the fertile Santa Clara valley, about five miles from Ventura, the county seat, at the base of a mound, placed there as if nature had intended it as a crown to the smooth, broad streets and beautiful lots of the town below. On this mound the foundation of the Methodist university is now being built. Near by a large hotel will soon be put up, commanding a view of the valley, the mountains and the ocean with its islands, and the many vessels plying up and down the coast. The Montalvo Water Co. have completed the reservoir and developed an abundant supply of water. There are several dwelling-houses in course of construction, and the place already has a printing-office, a railroad depot, and post-office. Last Saturday a public auction sale of lots took place. Many from Los Angeles and neighboring towns availed themselves of the low fare to visit Ventura and attend the sale. About \$20,000 worth was sold that day. Montalvo bids fair to become a beautiful little city in the near future.—*D., April 4th.*

Yuba.

DISTRICT ASSOCIATION.—*Sutter Farmer*, April 6: The directors of the 13th Agricultural District held their annual meeting in Marysville last Monday, and the following officers were elected for the ensuing year: D. E. Knight, Pres.; C. A. Glidden, V. P.; T. J. Sherwood, Sec.; J. J. Shaffer, Treas. John H. Kimball was elected a director in the place of N. D. Coombs, deceased. A Finance Committee was appointed as follows: From Sutter county—Directors Littlejohn and Kimball; Yuba county—Treasurer Shaffer and Directors Cutts and Glidden. The fair will begin Aug. 27th and end Sept. 2, 1888.

OREGON.

SHEEP-KILLING DOGS.—*Oregonian*: A short time since a dog killed one of R. Scott's fine Cotswold lambs at Milwaukie. The carcass was sprinkled with arsenic and the dog and lamb repose in one grave, the lamb inside the dog principally. Then came another dog and killed six more lambs and a ewe, and also killed six for Mr. Lewelling. The latter tracked the dog home and shot it by its own kennel. It was found that the owner owned nothing else but the dog, so it was impossible to recover any damages. The wonder is that he did not have several dogs, as such fellows generally have, and that the whole flock of fine-blooded sheep had not been killed.

MECHANICS' FAIR.—The directors of the Portland Mechanics' Fair held a meeting at the First National bank, Monday evening, and approved the action of their Building Committee in awarding the contract for improvements to the pavilion to Mr. J. E. Bennett. These improvements and repairs will cost nearly \$5000, and will increase the area of the pavilion 50x200 feet, will afford the public a greater seating capacity, a finer promenade, and a large increase of space for exhibits.

WASHINGTON TERRITORY.

GREAT IRRIGATION SCHEME.—*North Yakima Cor. Oregonian*, March 22: An incorporated company, representing a half million dollars capital, has been organized to construct and operate a canal 52 miles long, 20 feet wide and 40 feet bottom, from this city through the Sunny Side region in the Yakima valley to the mouth of the river at the Columbia. There are five trustees named in the charter of the Yakima Valley Land and Irrigation Co. for the first six months, consisting of Chester A. Congdon and Henry P. Barbour of St. Paul; Roland B. Kinne of North Yakima, and F. A. Sear and T. C. Sears of Tacoma. The principal place of business is North Yakima and the duration of the incorporation is 50 years. This canal will reclaim the finest body of land in the Territory, nearly 400,000 acres, which will be open to immediate settlement, so far as the government lands are concerned. Work will begin at once.

SHAMEFUL!

Last week one of the Cyclone Agents took down an old mill and put up a Cyclone. The old mill required 24 hours to fill the Tank. The Cyclone started off in good shape and filled the Tank and FLOODED THE CELLAR; all in TWO HOURS.

The Agents of any other mill will be furnished the full particulars of this occurrence if they CARE TO KNOW.

“CYCLONE!”

Last year it was the BEST, and now that we have improved it, it is BETTER THAN BEST. Our New Catalogue is a daisy. Send for one. Keep your EYES OPEN and you will soon see our BANNERS. LOOK AT THEM.

HORTICULTURE.

Bananas in California.

EDITORS PRESS:—Your note of April 7th is at hand, with the article from the Yolo Weekly Mail of Woodland headed "A Curiosity." The article is more of a "curiosity" than the bananas growing in California to any person who has devoted any attention to this subject. There were banana plants—not trees, it is not a tree—growing in this State as early as 1870. I had them in Sacramento experimenting with them at that time to get a variety suited to the climate, as there are as many varieties as of any other fruit. I hoped to succeed, and have done so, having raised ripe bananas in Sacramento city without any more protection from the inclemencies of the weather than an orchardist would bestow on a pear or peach tree, for three successive years past. The banana was planted in Los Angeles and Santa Barbara and they raised fruit there, for I have seen the fruit myself; but the plants look and do better here, for we have less wind in the warm season and warmer nights.

I had one variety 20 feet high with fruit on last season—three bunches in one hill in my front yard. My choicest and best variety, I suppose, had as many as six or eight, the flavor finer than any imported bananas. If, however, A. D. Porter of Woodland has raised a bunch of bananas this season (which, of course, would have to grow during our late phenomenally cold winter) without any protection, he has an acquisition—a variety to be sought for. The last winter, for the first time in years, frosted mine to within five feet of the ground, and I do not expect bananas before next September. However, I had the pleasure of a ripe bunch taken off just before the great freeze.

In raising fruiting trees or plants to demonstrate the capability of the climate, not the shadow of protection should be given them, for it is then that the conservatory culture comes in play, and plants can be raised that way in the coldest climates. The editor of the Mail could have avoided the great mistake he has made on this subject if he had been more observing, for a hill of banana plants has been growing and ripening its fruits in the grounds of the Southern Pacific Company, not two minutes' walk from the depot, planted and raised under my supervision for the late general master mechanic, A. J. Stevens. These plants are a curiosity to Eastern people, and grow as finely as in any tropical country. They were, of course, set back this late winter, but are sprouting out again. Many of the Sacramento gardens have bananas also. They are greatly admired for their foliage, and have ceased to be a curiosity here in Sacramento.

SAMUEL H. GERRISH.

1517 G street, Sacramento.

In Santa Clara Orchards.

Apricots Growers and Buyers.

EDITORS PRESS:—I am glad to see one paper of this State that is not afraid to expose some of the fraud practiced on the farmers and fruit-growers. Your item from Haywards, Alameda county, in March 31st issue is a good one.

Apricots are a very light crop in the Willows, in Hamilton district, in Cambrian district, also near Los Gatos and Saratoga—in fact about all over the county. The orchards with a good crop are very scarce. As about seven-eighths of the apricot trees set in this county are of the Moorpark variety, and nearly a failure this season, and other varieties are light, if we have one-fifth as much this year as last I think we will do well.

I have heard of parties being offered three and three and a half cents per pound, but have not seen any buyers yet. Some of the orchardists are holding for four cents per pound; others say they will dry theirs, as the difference in price will not pay for hauling the few they have.

When the agents for the canneries and driers come around to buy our apricots we will probably hear how they have bought hundreds of tons near Haywards at one and a half cents per pound, but they won't be very apt to try to bluff Judge Blackwood again. They tell us of the big crops up at Vacaville, Marysville, Haywards, Gilroy and other places, and how strange it is that it happened to be light near San Jose; how they can buy hundreds of tons of apricots near Fresno and Los Angeles or Santa Barbara at \$15 to \$20 per ton.

The prospects for a large prune and cherry crop are good, but the peach crop will be lighter than last year. Most of the orchards are in fine condition, the late rain having enabled the cultivators to pulverize the soil and kill weeds. The mud has dried up, leaving the roads in first class condition, and it is just the time to show the country to Eastern visitors. Cherry trees are in bloom and the grain looks finely.

San Jose, April 8, 1888.

G. W. G.

THE 84 CANAL Co. has filed articles of incorporation. Its object is to conduct flowing water from Fowler Switch canal to supply water for irrigation. Principal place of business, Selma, Fresno county. Directors, P. Allen, E. H. Tucker, Geo. B. Otis, Silas Prather, S. B. Holston. Capital stock, \$9000.

GOOD HEALTH.

Old Age.

The Physical Changes of Advancing Years. Failing Mental Powers.

In continuation of this subject from our last issue, we subjoin the following interesting series of facts through which we may learn the methods by which longevity is attained, and also those matters which are constantly arising to interfere with reaching advanced old age:

The advance of age is indicated by signs which tell unmistakably that all the powers of life are declining. Thus the ravages of disease are repaired with less rapidity than during the more vigorous periods of life, or permanent defects are left, showing the inability of the body to restore itself completely. It frequently happens that losses of substance occasioned by disease are apparently filled up as in earlier periods, but a close examination of the replacing tissues shows them to be made of inferior stuff. The occurrence of the so-called degenerations is highly characteristic of age. Chief among them are the fatty and calcareous degenerations. Fatty degeneration is especially apt to show itself in those organs most essential to health, and whose failure interferes most directly with the phenomena of life. The muscles, especially of the heart, are most disposed to this change. Little granules of fat take the place of the contracting material essential to muscular action, and the organ becomes weakened in proportion to the number of fibers which have undergone this change. The liver, kidneys, and other glands are next most often affected by a similar deposit of fat, which takes the place of the secreting cells essential to the continuance of the performance of the important duties of these glands. Fatty degeneration may, and frequently does, attack the walls of the arteries, weakening them and leading to rupture and outflow of the blood contained therein. This is the change which usually leads to apoplexy and aneurism, quite common in the aged. Such bleeding leads to death or paralysis, mostly of one or the other side of the body. When the same process attacks the arteries of the brain, it makes them brittle and leads to the easy fracture so frequently seen in old age.

Calcareous degeneration frequently follows the fatty form. When this is the case the disposition of the arteries to break and permit hemorrhage is increased. But the most characteristic of the effects produced by this change is the mechanical interference it produces in movements of different parts of the organism, especially where flexibility is necessary to the proper performance of movements. Thus the ribs, breastbone, cartilages of the ribs and the substance between the numerous small bones of which the spinal column is composed, become stiffened and rigid from the deposits of lime salts. This renders free movements of these parts impossible and may occasion much pain. When the process extends to the valves of the heart the consequences are extremely disastrous. All the serious consequences of valvular disease of the heart present themselves the same as if they were due to inflammation, and death results from heart failure. If the coats of the arteries become calcified, they may become clogged and occluded by the formation of a clot upon their inner coat (thrombosis), or they may break with little provocation, producing, in either case, paralysis or death, after the same manner as that due to hemorrhage from fatty degeneration. A somewhat similar process of degeneration may take place in the crystalline lens of the eye, producing cataract and blindness, often curable by operation.

Calcareous degeneration attacking the walls of the arteries of the brain may produce disastrous results in two different ways—by making them brittle and thus tending to apoplexy, or by encouraging the formation of clots, which, sooner or later, shut off all blood supply in the region to which the vessel is distributed. The effect of depriving a part of the brain of its supply of blood is to cause its destruction by softening.

Softening of the Brain.

Most cases of softening of the brain occur in old age and are brought about in the manner just indicated. If the softening attacks a part of the brain whose business is to begin movements, then paralysis, or loss of the power of voluntary motion, will be an important symptom. If a part of the brain used in thinking or the formation of judgments, comparisons, etc., is attacked, then failure of the mental faculties will follow. It is a matter of common observation that softening of the brain is almost certain to show mental failure, especially loss of memory, with transitory paralysis of individual limbs at first, passing into complete and permanent loss of the power of motion in the later stages.

Not so often in occurrence, but happening without great infrequency, is "senile gangrene." This is a mortification of one or both lower extremities, which is produced in a manner exactly like softening of the brain. Thus the inner coats of the arteries become rough and rigid from calcareous degeneration. The blood deposits a clot all along the inner surface because of this roughening. Finally there comes a time when all circulation is shut off from the feet and lower part of the leg. If the veins and absorbents are open and capable of draining the dead substance of its fluids, the

parts dry up, turn black, shrivel and become mummified. This is the dry gangrene of old age. In case the drainage of the part is defective, the fluids in the dead parts undergo putrefaction, the very characteristic odor of decomposing flesh arises, sloughs occur, and the surface breaks down into foul ulcers. This is the moist form of senile gangrene.

It may be easily understood that old age is not the only cause of this condition. It may occur in early life as the result of frost-bite and other injuries greatly impairing the vitality of the tissues or of the arteries. Removal of the dead parts is the only remedy for senile gangrene. The amputation should be made through healthy tissues far above the point where the "line of demarcation" separates the dead from the living structures. This is because the arteries are always diseased a long distance from the points which are actually gangrenous.

The Period of Decline of the Bodily Powers

Is marked by a progressively increasing loss of power to develop animal heat. This is shown by the inability to resist chilly weather and the disposition for the hands and feet to become cold. There is at the same time an inability to perform muscular exertion. These two facts are closely related, for muscular contractions are the principal source of animal heat. The appetite, as a rule, remarkably lessens, while the waste materials are also diminished in amount.

The lessened activity shows itself in the mental operations also. The mind is less vigorous, as a rule, and original works of a literary or scientific character are seldom undertaken after the age of 60. Facts submitted to the judgment may be passed upon by the age with great correctness and discrimination, for the influence of the feelings is partly, if not entirely, removed by the effects of age. This may require time; but the value of the opinions of the aged who have preserved their mental faculties is proverbial. The slowness of mental action is perhaps due to the slow processes of nutrition which mark the workings of the nerve cells as well as those of every structure.

The physical change in all kinds of cells seems mainly to be a deposit of fat granules, in the first place, which is followed by absorption of the fat and the substitution of lime salts in its place. The deposit of either fat or lime in place of the structures proper to any part, of course, hinders the normal work that should be performed by the structure which has undergone this transformation.

The characteristic changes which go along with old age, and to which the final stoppage of the machinery of life is due, are seen to be mostly degenerations of structures in which the normal active tissues are replaced by materials of inferior quality. Fat and lime salts are very poor substitutes for the healthy, contractile muscles, or the transparent structures of the eye. It has been thought by some that if we could prevent the introduction of earthy salts into the body by way of food and drink, the rigid arteries and degenerations generally of age might be prevented. The plan proposed for thus forestalling age is as follows: Drink nothing but distilled water, or a drink containing phosphoric acid and the juice of lemons, of which distilled water is the basis. Eat no vegetable containing much of the earthy salts. This would exclude spinach, cabbage, etc., from the diet. No tea nor coffee. Take plenty of milk. A much more rational diet would be one containing but little albuminous food, plenty of milk, no eggs nor lean meat, but as much fat as can be taken without discomfort. It has been observed that calcareous degeneration is almost always preceded by chronic changes in the kidneys, and these are certainly hastened by a diet of lean meat, eggs and the like.

Many individuals have become aged long before the number of years they have seen would entitle them to the distinction of longevity. A glance at the prematurely aged may give some hints as to the means of prolonging life beyond its usual limit. Sir Walter Scott gathers many of the causes of precocious senility together in the following eloquent stanza:

Danger, long travel, want and woe
Soon change the form that best we know;
For deadly fear can time forego
And bleach at once the hair;
Hard toil can roughen form and face,
And want can quench the eye's bright grace,
Nor does old age a wrinkle trace
More deeply than despair. —Marmion.

Too rich a diet—rich in albuminous food—predisposes to gout, and this to kidney disease. Indulgence in strongly alcoholic drinks has the same result. The effects of "high living" are made still more serious by deficient muscular exercise, and all of these favor the development of fatty and calcareous degenerations in the heart and arteries. "Fast living," excesses of every sort, and indolence, are among the most certain hindrances to attaining longevity.

In advanced life the lungs are especially prone to inflammation. The pneumonia of old age is excessively fatal. Even an ordinary "cold on the lungs" is liable to become a very serious matter. The ribs and breastbone lose most of their elasticity, and breathing is not so deep or so free as it is in earlier years. Hence one of the reasons for the fatality of bronchitis and catarrhal pneumonia in the aged. One remarkable fact connected with the pneumonia of old age is that it may run its course to a fatal termination and give but little notice of its presence by significant phenomena. Hence this disease is very frequently overlooked. A large

number of cases of "senile debility," "senile marasmus," "deaths from old age," are, in reality, due to pneumonia. It is proper to call such cases deaths from old age, for if this factor had been absent the disease would probably have been recognized and properly treated, the element of old age having been the really important one in determining the fatal result.

It is very likely that the constitution and tendencies inherited from the ancestry have much to do with long life. Of course, leaving all accidents, epidemic diseases, etc., out of account, Hereditary tendencies include more than mere bodily form and toughness of fiber. There are mental and emotional tendencies which are equally important in determining the length of life to be attained by the possessor. Control over the passions and the ability to foresee and guard against consequences are not less important than the possession of good digestion and a nervous system perfect in all its parts.—*St. Louis Globe Democrat.*

"Didn't Know It Was Loaded."

The young man fell dead!

A friend had pointed a revolver at him.

"He didn't know it was loaded!"

We often hear it said that a man is not responsible for what he does not know. The law presupposes knowledge and therefore convicts the man who excuses crime by ignorance!

"If I had only known" has often been an unfortunate man's apology for some evil unknowingly wrought, but in a matter of general interest—as for instance that laudanum is a poison, that naphtha is a deadly explosive, that blood heavily charged with a vitriol's accumulations of the waste of the system,—it is one's duty to know the fact and the consequences thereof. Our good old grandmothers knew, for instance, that the opening of spring was the most perilous period of the year.

Why?

Because then the blood stream is sluggish and chilled by the cold weather, and if not thinned a good deal and made to flow quickly and healthfully through the arteries and veins, it is impossible to have good vigor the rest of the year. Hence, without exception, what is now known as Warner's Log Cabin Sarsaparilla, was plentifully made and religiously given to every member of the family regularly through March, April, May and June. It is a matter of record that this prudent, preventive and restorative cure saved many a fit of sickness, prolonged life and happiness to a vigorous old age, and did away with heavy medical expenditure.

Mrs. Maggie Kerchwall, Lexington, Ky., used Warner's Log Cabin Sarsaparilla "for nervous sick headache of which I had been a sufferer for years. It has been a great benefit to me," Capt. Hugh Harkins, 1114 S. 15th St., Philadelphia, Pa., says "it purified my blood and removed the blotches from my skin." Mrs. Aarea Smith, Topton, Berks Co., Pa., says she "was entirely cured of a skin disease of the worst kind," by Log Cabin Sarsaparilla. Bad skin indicates a very bad condition of the blood.

If you would live and be well, go to your druggist to-day and get Warner's Log Cabin Sarsaparilla and take no other,—there's nothing like it or as good,—and completely renovate your impaired system with this simple, old-fashioned preparation of roots and herbs.

Warner, who makes the famous Safe Cure, puts it up, and that is a guarantee of excellence all over the known world. Take it yourself and give it to the other members of the family, including the children. You will be astonished at its health-giving and life-prolonging powers. We say this editorially with perfect confidence, because we have heard good things of it everywhere, and its name is a guarantee that it is first class in every particular.

NEWSPAPERS IN 1888.—From the edition of Geo. P. Rowell & Co.'s "American Newspaper Directory," published April 2d (its 20th year), it appears that the newspapers and periodicals of all kinds issued in the United States and Canada now number 16,310, showing a gain of 890 during the last 12 months and of 7136 in 10 years. The publishers of the Directory assert that the impression that when the proprietor of a newspaper undertakes to state what has been his exact circulation, he does not generally tell the truth is an erroneous one, and they conspicuously offer a reward of \$100 for every instance in their book for this year where it can be shown that the detailed report received from a publisher was untrue.

THE Newark Machine Co. of Columbus, O., have concluded not to dispose of their business to the Victor Machine Co. as has been contemplated. Therefore, they have started up their factory with increased capital and are building their full line of Victor Clover-Hullers, Imperial Straw-Stackers, Victor Manure-Spreaders, etc., which they are prepared to furnish to the trade.

SYRACUSE NURSERIES.—Smiths, Powell & Lamb of Syracuse, N. Y., send us their illustrated descriptive catalogue of trees, vines, shrubs, roses, etc., cultivated and for sale at the above-named nurseries, which were established over half a century ago and occupy about 500 acres of the choicest land in Onondaga county, N. Y.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

A Rare Chance.

The Gablian Rancho, situated in Monterey county, containing 7665 acres, is offered at \$30.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness Avenue, San Francisco.

Bench-Show Awards.

McCleery's Bus. Poodles, black, dog—1st, Dr. M. W. Fish's Zulu; 2d, Thomas Williams' Bijou; bitches—1st, Dr. M. W. Fish's Diane.

Miscellaneous—1st, Mrs. Zammitt's Wolf; 2d, Miss J. R. Shafter's Bruno S. (These were probably Esquimaux dogs.) J. J. Jameson's Dick (spitz).

Special prizes were also awarded as follows:

Non-Sporting Specials.

Best fox terrier—Capt. J. H. Auld's Daisy.
Best bull terrier—Stuart Taylor's Kittie.
Best Great Dane—A. Hoepfner's Caesar.
Best rough St. Bernard—A. W. Manning's Judge.
Best pug—Mrs. L. Quint's Queen.
Best mastiff—Mrs. E. F. Preston's Actress.
Best Scotch terrier—Dr. A. E. Buzard's Sam.
Best Yorkshire terrier—F. W. Sierp's Mash.
Best Skye terrier—Robert Bruce's Fido.

Sporting Specials.

Best deer hound—C. A. Joutet's Schula II.

Best greyhound—J. F. Carroll's Jennie June.

Best greyhound puppy—J. F. Carroll's Benelon II.

Best greyhound dog—J. F. Carroll's Monarch.

Best pointer—J. Martin Barney's Tom Pinch.

Best pointer (bitch)—C. R. Brown's Donna Sensation.

Best pointer (puppy)—H. Kahn's Wade Hampton.

Best English setter—James B. Barber's Pilot.

Best English setter (puppy)—C. Kaeding's Buddie K.

Best Irish setter—A. B. Truman's Lady Elcho T.

Best black and tan setter—F. A. Tatt's Dorr.

Best black or tan setter bitch (aged or puppy)—E. H. Wakeman's Hazel Kirke.

Best kennel of English setters—C. Kaeding's Fannie K.

Shot and Buddie K.

Best kennel shown of all classes and best kennel of greyhounds—J. F. Carroll's Monarch, Jennie June and Mischief.

Best kennel of pointers—G. W. Bassford's Don's Girl, Blossom and Lottie B.

Best setter in show—A. B. Truman's Lady Elcho T. The best dog in the largest class of dogs—J. B. Barber's English setter Pilot.

Best trick dog—F. A. Tatt's Gordon setter Dorr. Best greyhound with a coursing record—J. F. Carroll's Monarch.

Best kennel of Irish setters—A. B. Truman's Mike T, Lady, Elcho T, Dick R and Kate T.

Best dog exhibit by a lady—Mrs. E. F. Preston's mastiff Actress.

Best water spaniel—T. J. Pinder's Nora P.

Best beagle—G. W. Bassford's Daisy II.

Best pedigreed collie bitch—Mrs. Patton's Fanny.

There was some difficulty in awarding the prize for the best dog of the show, and at last the chance narrowed down to the pointer Tom Pinch, owned by J. M. Barney, and the mastiff Actress. As the judges differed, the referee, Mr. Winters, finally decided in favor of the former.

Suffocated in a Wine-Vat.

On the morning of March 28th, Louis Gairaud, a Santa Clara vigneron, and an old Indian in his employ known as "Santa," descended into a large wine-cask to clean it out. The Indian was overcome by the carbonic acid gas which had accumulated in the vat, fell to the bottom and died before he could be rescued. Mr. Gairaud himself was far enough up to grasp the rim of the cask, when the ladder gave way beneath him, but although somewhat faint he managed to hold on till the help he cried for came and pulled him out.

The San Jose Times remarks in this connection that asphyxiation in wine-vats is not very uncommon. Only a few years since a Mr. Dragocovich and one of his employes lost their lives in Santa Clara in like manner. Dragocovich entered the vat to clean it out preparatory to making wine, was overcome by the gas and fell to the bottom. One of his employes heard the sound of the fall and hastened to render assistance. He, too, was overcome, and fell upon the body of his employer.

In the more recent case, before Mr. Gairaud and Santa entered the vat, a candle had been lighted and lowered into it without extinguishing the flame. It is thought, however, that the light could not have been lowered to the very bottom, else it must have gone out.

A coroner's inquest was held at noon. The verdict was in accordance with the above statement, and the jury recommended that more precautions be taken to ascertain the presence of foul air in wine-vats before they are entered by workmen.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING APRIL 3, 1888.

380,416.—DEVICE FOR CLOSING PURSES—Emilie N. Ames, S. F.

380,478.—BED-PAN—Kate M. Duffey, Atria, Oregon.

380,431.—TRUNK HARNESS—W. H. Gabbs, S. F.

380,433.—HAND-PIECE FOR DENTAL ENGINES—H. S. Grace, S. F.

380,435.—ELECTRIC ARC LAMP—Aug. Harding, Oakland, Cal.

380,489.—ROTARY ENGINE—Jefferis & Thurman, Lincoln, Cal.

380,395.—ROOF-CLIMBING DEVICE—F. Kramer, Los Angeles, Cal.

380,453.—TRAVELING THRASHER—R. R. Moore, Modesto, Cal.

380,341.—STATION INDICATOR—T. W. Moproe, S. F.

380,342.—TRAVELING THRASHER—C. K. Myers, Stockton, Cal.

380,401.—VISE—E. I. Nichols, S. F.

380,463.—PRESERVING GRAPE MUST AND SKINS, F. Springmuhl, London, England.

380,612.—HAND NAIL DRIVER—J. Weichart, S. F.

380,374.—EARTH SCRAPER—Wilkinson & McCourt, Acampo, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Exoneration of State Engineer Hall.

We intended to have mentioned last week the exoneration of Wm. Hammond Hall of certain charges which were preferred against him by a San Francisco paper. The following letter from the Governor shows how complete his exoneration is:

SACRAMENTO, March 30, 1888.

Joseph D. Redding, Attorney for William H. Hall, State Engineer—DEAR SIR: I have examined with great care and attention the charges preferred against Wm. H. Hall as State Engineer, with special reference to the expenditure of money under his supervision for the publication of reports of maps, irrigation and draining surveys, and my conclusions are that he has been guilty of no malfeasance in office; but, on the contrary, he has shown unusual care and caution in using the appropriation; and I further find that all the money expended and received by him with the approval of Governor Bart before being drawn from the treasury. I take pleasure in exonerating him in every way. Yours truly, R. W. WATERMAN.

THE corner-stone of the beet-sugar factory will be laid at Watsonville on Saturday, the 14th inst., with appropriate ceremonies.

WELLS, RICHARDSON & Co's

IMPROVED Butter Color.

EXCELS IN { STRENGTH
PURITY
BRIGHTNESS

Always gives a bright natural color, never turns rancid. Will not color the Buttermilk. Used by thousands of the best Creameries and Dairies. CHAS. E. WILSON, Attorney-at-Law, 420 CALIFORNIA ST., SAN FRANCISCO. Special attention to practice before the U. S. Land Office and Interior Department.

ALILA!

The Arcadia

OF THE—

SAN JOAQUIN VALLEY!

THERE DOES NOT EXIST IN THIS VAST extent of country a section so manifestly destined for the site of

A PROSPEROUS TOWN,

Supported by the demands of a rapidly and steadily increasing population, as Alila. THE ENCOURAGING NUCLEUS is already there, for Alila now possesses a well-conducted and

LIBERALLY FURNISHED HOTEL,

Several well-appointed stores, and, in addition to these, that most important feature and best evidence of progress, a

Handsome and Spacious Schoolhouse, which stands nearly, if not precisely, in the center of the town-site. Alila is environed by

A MOST FERTILE COUNTRY,

A soil of surpassing richness, with the capacity of sustaining, in comfort and prosperity,

Thousands of Industrious Settlers.

The resources of this land are illimitable. At this season, in the surroundings of Alila, the plow is busy in every direction.

MILES OF GRAIN,

Soon to wave in luxuriant beauty above the sod now decked with wild flowers, will be a most substantial ornament to

ITS BROAD ACRES.

This scene of agricultural activity and brisk and intelligent cultivation is

A GRAND ASSURANCE

Of what the future must bring forth. The Southern Pacific Railroad

PASSES THROUGH ALILA,

And the stations and sidings there are about the best on the line.

ALILA

Is in Tulare County, 22 miles south of the city of Tulare, on the main line of the Southern Pacific Railroad.

Bovee, Toy & Co.,
19 MONTGOMERY ST.,

Are now offering a limited number of lots at private sale in ALILA, and intending purchasers should not delay in making their selections, as a

SERIES OF IMPROVEMENTS

Have already been inaugurated, consisting of grading streets, planting them with shade trees, increasing the irrigating facilities, and shipping material for the

ERECTION OF BRICK STORES

Upon the main street of Alila. This is a

Superb Opportunity for Investment,

Because the time is close at hand when

Wave after Wave of Eastern Immigration

Will fill up the great San Joaquin Valley, and every dollar placed in real property there will yield a four-fold return.

There are a few facts in connection with this property to which we desire to call particular attention:

First, the extreme richness of the soil has attracted a superior class of population, who are farming the land in an intelligent and progressive manner.

Every section in the vicinity of Alila and for miles around contains from two to four houses, presenting a prosperous and comparatively well-settled country, owing to the fact that the land is held in small holdings, and not in those immense tracts of single ownership which characterize other portions of the valley.

There is no other locality so well adapted for successful fruit and raisin culture.

Again, Alila lies in the direct line of Walker's Pass, the lowest point in the Sierras through which other overland roads coming into the valley will in all probability lead.

For maps and further particulars apply to

BOVEE, TOY & CO.,

19 Montgomery Street, S. F.

Miramonte Colony

— IN THE —

GREAT ARTESIAN BELT,

KERN COUNTY.

This tract comprises 2640 acres, all level land and ready for the plow.

In this colony is the

Greatest Artesian Well in the World,

And a perpetual water-right goes with the land bought. Tracts of 20 acres will be sold for \$500—only one-third cash; balance, one-third in two years, and one-third in three years, with ordinary interest.

Apply at once for best selection to

C. H. STREET & CO.,

Successors to Immigration Association of California,

The Great Dog-Show.

To enjoy greatly the long-promised bench-show, which came off here last week under the auspices of the Pacific Kennel Club, one needed not to be an expert canine critic, nor even much of a dog fancier.

As we entered the Mechanics' Pavilion, the varied voices which fell upon the ear before we came in sight of the exhibits, left us in no doubt as to the kind of creatures we were going to see. When fairly within, we found the animals disposed in roomy, straw-strewn box-stalls, open in front and overhead, and raised on benches (whence the title "bench show") to a height convenient for spectators. These boxes stood in several rows, lengthwise of the hall, with ample passage-ways between, and were well arranged for the purpose of displaying their tenants.

First in order were the big mastiffs—sturdy, serious-looking fellows, in smooth, fawn-colored coats, with more or less black on muzzle and paws—who might well serve as trusty guardians of house or person. Of these there were half-a-dozen, each lightly chained to the limits of the pen allotted him. Among them was Mrs. E. F. Preston's "Actress," scarcely two years old, which not only won the first prize in her class, and the special prize offered for the best dog or bitch in the St. Bernard or Mastiff classes, but puzzled the judges, who found it well-nigh impossible to decide whether she or the pointer "Tom Pinch" should be honored as the "best dog in the show."

Then we came to the noble, great St. Bernards, in which class there were 12 or 15 entries; but when the dogs were paraded for inspection all but three or four were quietly ruled out, as not up to the standard of pure St. Bernards—even Mrs. Baldwin's huge white "Rex" being excluded by the relentless judge—which of course caused consternation among the exhibitors. Mr. Manning's rough-coated "Judge," reddish brown and white, A. Hoepner's "Garda," brindle and white, and Mr. Culbreth's smooth-coated "Rector III," orange and white, with black nose, were admirable beasts in this category.

The majestic Great Danes or German mastiffs, of which several were shown by Mrs. Von Ploenies of San Francisco and A. Hoepner of Berkeley, attracted much notice. They are powerful, lithe-looking creatures, with sleek, dark bluish-grey coats. Mrs. Von P.'s "Modoc" is said to be brother to one of Prince Bismarck's famous canine companions.

C. H. Jouett's two deer-hounds, shaggy, tawny and black mixed, and the numerous slender, clean-limbed greyhounds, of various coloring, in turn engaged our attention. Among the fox-hounds, A. H. Rickett's superb "Josh," black-and-tan, with high-domed head and pensive look; C. H. Smith's beauty "Bessie," white and tawny, with singularly large and shapely ears, and H. W. Heath's bright, handsome puppy "Nero" proved peculiarly attractive.

The pointers and setters outnumbered other kinds of dogs, over 80 of the 259 entries being in these classes. We lingered long in front of the many stalls assigned them, but time failed us to examine them as we desired to do. Of all the fine pointers, "Tom Pinch," shown by J. Martin Barney of Dutch Flat, won the first and special prizes for his class; and when, on the closing night, the candidates for the honor of being pronounced "best dog in show" were marshaled for judgment, dog after dog was ordered out of the ring until only "Tom Pinch" and "Actress" remained, he being the best dog in the sporting class, and she the best in the non-sporting. The judges were unable to agree, Mr. Davidson standing out for "Tom" and Mr. Watson for "Actress." At length Dr. Winters was invited to act as referee, and decided in favor of Tom Pinch, awarding him the IXL gold medal.

Among all dogs we confess to a special fondness for setters, particularly Irish setters; and so even Mr. Taft's prize trick-dog, the Gordon "Dorr" from Truckee, beautiful wonder-dog as he was, seemed to us less admirable than A. B. Truman's auburn-clad "Lady Elcho T," who was adjudged the best setter on exhibition.

In the rest of our hurried survey, we glanced with interest at the Irish water-spaniels, in their heavy, curly, liver-hued mantles; at the kennel of friendly, funny little duck-legged yellow dachshunds (badger dogs); at the black poodles, with cloaks as kinky as a negro's wool; at the wolfish Esquimo, which Mrs. Zammatt drove around in harness; and for the remainder must simply refer to the list of awards which may be found on page 335.

The excellent catalogue of the animals made a visit to the pavilion much more enjoyable. The judges imported for the occasion showed themselves masters of their business—the right men in the right places. And although the expenses incurred by the P. K. C. outran the receipts, their inaugural show as a show was a marked success. It is given out that the club will hold one in this city annually, and it is expected that next year a much better class of dogs will be exhibited in the non-sporting classes.

HEREAFTER the terminus of the Canadian Pacific Co.'s steamship line will be San Francisco. The steamships of the new China line will run between Hongkong and San Francisco, stopping, of course, at Vancouver and Yokohama, which will practically become way ports.

Around Vacaville.

EDITORS PRESS:—The weather is warm and pleasant. The rain of the past two weeks has softened the ground so that it can be put in fine order. For pulverizing the soil the best implement ever used in this part of the country is Donahue's of Vacaville. It is made of 2x6 scantling bolted together much like a common clod-masher, with three rows of knives that cut up everything they run over. For killing weeds there is a V-shaped knife to attach. They are sold at from \$14 to \$20. If Mr. Keesling of San Jose will try one, I don't think he will ever want to use an "Acme" again, at least such is the experience of many here.

The prospect for the apricot crop around Vacaville is good. The old trees have light crops in many places, but the young trees are so loaded that from one-fourth to one-half will have to be thinned off. Some have already commenced thinning. The outlook for the cherry crop also is good, but it is too early yet to tell what it will be, as cherries keep dropping until half grown.

The question of help for the coming season is interesting many now. About 35 men have lately come from the East to Vacaville in search of work, and all are now employed on the ranches at from \$25 to \$30 per month. So far as I have heard, they give satisfaction and are satisfied, although some are a little homesick. I do not think the plan of importing negroes will be successful. It was pretty thoroughly tried in Vacaville over a year ago, and failed. The few who would have stayed and worked, some meddlesome fool persuaded away to hunt larger wages.

Frank Back has a large number of trestles made about two feet high to put trays on when drying fruit. The higher fruit is placed from the ground when dried in the sun the cleaner it will be, but it will dry from 6 to 36 hours quicker if the trays are placed on the ground than if set on anything where the air circulates underneath. Fruit will dry in one-half the time on a board tray that it will on tin or wire screens.

The grain and hay crops between Vacaville and Cache lough, a distance of 20 miles, look better than for a number of years at this season.

Vacaville, April 8, 1888.

Sericultural.

The Ladies' Silk-Culture Society held their monthly meeting Thursday, April 5th, at the rooms of the State Board of Horticulture. There were present Dr. Gibbons in the chair, and Meses. Ewer, Mayer, Pratt and Williams. Bills to the amount of \$421.82 were ordered paid.

W. G. W. Harford, manager of the silk-culture station at Piedmont, reported as follows: "I beg to state that the month of January was mainly devoted to clearing more ground for the plow, which work was continued with but few interruptions up to Feb. 16th. The exact area of the newly cleared land I have not yet determined, but I need not tell you that it enlarges the boundaries of the cultivated land to a very considerable extent. Mr. Gray commenced plowing and cultivating on the 18th, and finished the entire piece on the 21st of February. With the exception of a small patch of ground on the rocky point above the nursery, the entire field is planted with trees and cuttings. This would also have been set with trees had time permitted. During odd intervals a couple of small patches have been cleared at the house and devoted chiefly to mulberry trees."

There are now planted on the premises at Piedmont 11,721 mulberry trees and cuttings, representing the following varieties: Nagasaki, 4321; Lhoo, 93, and 715 unknown varieties from Japan. Mrs. H. B. Williams presented 2085 of unknown varieties, and there are 1933 Roses, 454 Alba and 2120 Multicaulis mulberry trees, from which the society intend to experiment in order to determine the best kinds to plant in California.

The president stated to the meeting that about 1000 young trees had been distributed to applicants, and that there will be seed or young worms at the disposal of the society for those who may desire to obtain them.

The Ladies' Society is entirely distinct from the State Board of Silk Culture. The Piedmont station is supported by a \$5000 appropriation by the Legislature, and the monthly expenditure is something over \$400.

The meeting adjourned to Thursday, May 3d.

WYOMING STOCKMEN.—Three hundred members of the Wyoming Stock-Growers' Association attended the annual meeting at Cheyenne on the 21 instant. The rangemen appeared to be in good spirits regarding the outlook. Few storms occurred during the winter, and cattle are now in fine condition. Col. A. T. Bobbitt was elected president of the association, ex-Governor Baxter vice-president, Hon. A. H. Reel treasurer and T. B. Adams secretary. Resolutions urging the passage of the Palmer Pleuro-pneumonia bill and asking for the removal of the license and tax on oleomargarine were adopted by a unanimous vote.

HON. FRANK MCCOPPIN has been appointed Commissioner to the Australian Exposition, and has gone to Washington to receive instructions and make preparations for the service.

News in Brief.

ANOTHER savings bank has been organized in this city.

LOCO-WEED is doing much damage to stock in some parts of Arizona.

AN astronomical observatory is to be built at the University of Oregon.

FIFTY thousand orange trees have been planted in Butte county this season.

TWELVE million bricks have been burned at Pasadena during the past six months.

COUNTERFEIT silver dollars have been put in circulation in the Sacramento valley.

ACCORDING to the Portland Oregonian, 7000 immigrants arrived in that State during March.

THE Southern Pacific has made San Bernardino a terminal point—a concession on rates for freight.

A NUMBER of ostrich chickens have been hatched at Anaheim recently. All the birds are in prime condition.

A WELL flowing two barrels of petroleum hourly has been discovered between Gray's Harbor and Centralia.

LIVERMORE will soon have electric lights, and a new sash and door factory will begin work on May 1st.

RESIDENTS of Taylor, White Pine county, Nev., propose forming a co-operative company to develop the mines in that district.

SLACK CANYON coal, shipped from San Miguel, is now used on the engines of the Monterey express, the fastest train on the Southern Pacific line.

AN order has been made by the court that the Keely motor should be inspected by certain parties who furnished money for the scheme.

THE Central schoolhouse at Seattle was burned on Tuesday last. Loss, \$44,000; insurance, \$24,000. The school accommodated 800 pupils.

SANTA ROSA and Petaluma are to consolidate their efforts to attract greater attention from people abroad to the advantages of Sonoma county.

AGENTS of the railroad company are prospecting for coal in the neighborhood of Huron. Developments are being made of the recent discoveries.

THE motor road between San Bernardino and Redlands was finished last Saturday. Ballasting is nearly completed and trains will be running shortly.

HEREAFTER when specifications are sent out from Washington for public buildings on the Pacific Coast, bids will be included for Inyo county marble.

ANOTHER lumber ship, built of logs, will be launched at St. John, N. B., in June. It will be 600 feet long, 54 feet wide and 38 feet deep. She will have 12 masts and will carry a crew of 20 men.

THE Florence (Ariz.) Enterprise says that nearly all the land-owners along the Florence canal contemplate planting the larger portion of their properties to fruit trees and grapevines, to which the soil is admirably adapted.

TWENTY THOUSAND dead pigs in the Department of the Bouches du Rhone, and all in the course of a few months, is the result of the swine disorder imported into the south of France from the Province of Oran, Algeria.

THE Herald's Paris cable says: Chamberlain, the Texan who is suffering from wolf bites, and is now in the hands of Pasteur, has so far recovered that he is able to drink water without having convulsions. He expects to return home shortly, cured.

THE Supervisors of San Joaquin county pay a bounty of five cents each for gopher scalps. A few days ago a boy walked into the County Clerk's office at Stockton and received pay for slaughtering 2000 of the pests. The same day two other enterprising urchins "toted" in the scalps of 1000 gophers.

ACTING as the agent of Francis Whittaker & Son of St. Louis, Thomas Loughran, the commission merchant, is negotiating for the purchase of one of the large wool warehouses in the vicinity of Fifth and Townsend streets, which will be converted into a large pork-packing establishment at a cost of over \$100,000. The demand for fresh smoked bacon and hams on this coast has justified the venture.

THE Southern Pacific Co. has about completed the track-laying along the Willows and Mendocino Co. line. The force will soon be diverted to Madison, on the Capay valley line. The track-laying force on the Santa Rosa and Carquinez railroad has now reached Glen Ellen. The grade is almost completed into Santa Rosa. This road will be completed by June 1st. As soon as a grading force is available, the Southern Pacific Co. intend extending the line from Huron some 20 miles west into the Coast Range, toward Tres Pinos.

MUCH interest is felt in western and southwestern coast counties concerning the early completion by the Southern Pacific Company of a through line from San Francisco to Los Angeles by the way of San Jose, San Luis Obispo and Santa Barbara. The railroad company is proceeding very slow in constructing the road, in the opinion of some people, but the indications point strongly to the belief that its completion is not far off. The gap to be filled extends from Templeton to a point 18 miles north of Santa Barbara, a distance of 150 miles. There will be some heavy work to do, but with the usual construction force that the company employs, it is almost certain that in 12 months after work is commenced the road will be completed and in running order.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

SEEDS BY MAIL.—It is telegraphed from New York that the whole question concerning mail discrimination in the transmission of bulbs and seeds through the mails under Canadian postal regulations is likely to come up in the courts. Postmaster Carr at the suspension bridge has been temporarily enjoined at the instance of James Vick, seedsman, from interfering with packages of bulbs, seeds and plants sent through the mails from Canada on which postage has been prepaid at the rate of 1 cent for 4-ounce cases, and the case comes up for hearing May 7th.

C. E. GROSVENOR of Woodstock, New Brunswick, made us a friendly call a few days ago. Mr. G. is interested in pomology and in Jersey cattle. He has been in California some weeks, taking personal notes in Riverside, Fresno, and other places, as to soil, climate, and products, and will soon go home and give his countrymen the results of his observation through the columns of the Woodstock Press and Sentinel.

What California Enterprise is Doing.

One of the finest mail-order catalogues in the country has just been issued by Weinstock, Lubin & Co., Sacramento, Cal. It contains over a thousand illustrations and gives full descriptions and prices of this season's styles in clothing, dry goods, millinery, household supplies and the many other lines the house deals in. The book is sent free to any address and cannot but prove of interest and value everywhere.

Weinstock, Lubin & Co. have the largest mail-order shopping trade on the coast, which proves conclusively that their goods, prices and methods of business must be of the most satisfactory order.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Injurious Insects of the Orchard, Vineyard, Field, Garden, Conservatory, etc.,

—WITH—

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dewey & Co., publishers, 220 Market St., San Francisco.

Who Is It?

Who sent us a postal note from Middletown, Lak county, without sending his name?
Who did the same thing from Selma, Fresno county, some time ago?

It is impossible to give proper credits unless people will send their names with the remittance. Let all subscribers take notice.

P. S.—If people wonder why their letters are not answered or the paper stopped when they omit the postage stamp on their letters, or misdirect them, or give them to parties who never mail them, whose fault is it?

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

Carriages.

We are receiving 10 carloads of Carriages, Buggies and Wagons from the Briggs Carriage Company of Amesbury, Mass., which will be sold at prices that will be satisfactory, considering style and workmanship. Quality of material guaranteed the best.

F. A. BRIGGS & CO.,
220 & 222 Mission St., San Francisco, Cal.

out of ground at less cost than grubbing.
Railroaders and Farmers use no other.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!**FERTILIZE!****NITROGENOUS SUPERPHOSPHATE.**

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KORBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. KORBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 11, 1888.

The hot, forcing weather of the past week has brought garden truck and small fruits well along, but for grains, while forcing the plant in some sections, it is causing in other sections a sickly appearance for the want of rain. Trading the past week has been confined chiefly to seasonable vegetables and citrus fruits. The Eastern and European markets for wheat have ruled fairly steady, with a good under tone. To-day's cable is as follows:

LIVERPOOL, April 11.—Wheat. Upward tendency. California spot lots, 6s 5d to 6s 8d; off coast, 32s 9d@33s; just shipped, 32s 9d; nearly due, 32s 9d; cargoes off coast, advanced about 3d @ 9d; on passage, hardening; Mark Lane wheat, firm; French country markets, firm; wheat on passage to Continent, 32d, 000 qrs.; wheat and flour on passage to U. K., 2,250,000 qrs.; wheat and flour in Paris, firm; weather in England, milder.

Foreign Review.

LONDON, April 9.—The *Mark Lane Express*, in weekly review of British grain trade, says: The deliveries of native wheat are falling off rapidly, yet prices continue in favor of buyers. The sales of the week were 41,596 quarters at 30s, against 46,183 quarters at 32s 8d for the corresponding week of last year. Flour is depressed. Foreign wheat continues lifeless. The stocks in London increase weekly. The present quantity in the warehouses, 358,251 quarters, approaches the greatest ever known.

California Products in Chicago.

CHICAGO, April 7.—For choice fruit and desirable sizes of oranges there is a very fair demand and a firm market. California oranges in boxes containing from 128 to 226 oranges sell the best, as these are the most desirable; they also bring a premium over others. Of Florida oranges the supply is about exhausted at present. Messinas and Valencias are of fair sale and steady. There are a good many Jamaica oranges on the market and they rule rather easy. California Riverside oranges, number 128 and 226, sell at \$3.50 to \$3.75; other sizes, \$3.25; California oranges, other places, \$3; Navel, Riverside, \$5 to \$5.50; Navel, other places, \$3.50 to \$4. California lemons are slow and dull at \$1 to \$1.50 per box.

In California dried fruit there is hardly enough stir to bring about any important change. Domestic sales are made and the aggregate trade is fair, but the business done is mainly in small lots. Apricots and peaches are now the most active. In raisins there is a light business, but plums are ruling quite dull.

We quote: Apricots, sun-dried, @ lb, 11c; bleached prime do, 13c; do, choice, 14 1/2 @ 15c; do, fancy, 15 @ 16c; evaporated, choice to fancy, 14 1/2 @ 17c; peaches, sun-dried, @ lb, 11 @ 12 1/2 c; do, evaporated, unpeeled, 13 1/2 @ 15 1/2 c; do, peeled, @ lb, 17 @ 22c; plums, unpeeled, @ lb, 6 @ 7c; pitted, 10 1/2 @ 11c; prunes, according to size, @ lb, 6 @ 10 1/2 c; nectarines, according to quality, @ lb, 10 @ 14 1/2 c; raisins, loose Muscates, 2-crown, @ box, \$1.35 @ 1.45; do, 3-crown, @ box, \$1.50 @ 1.65; do, London layers, @ box, \$2.25 @ 2.35.

During the latter part of the week a better demand for beans has sprung up. The effect of this has been to cause a firmer market, not that prices have ruled any higher, but the figures which were asked early in the week without holders being able to sell, are finally obtained, so that to this extent was the market improved. At the annexed quotations beans are salable; California, according to quality, \$2.50 @ 2.75.

Eastern Wool Markets.

NEW YORK, April 10.—The wool market has been very quiet through the week, with only moderate lots taken up and prices fairly well sustained. Sales include 107,000 lbs of Texas at 16 @ 19 1/2 c; 23,000 lbs scoured California at 40 @ 45c; 50 bags scoured Territory at 44c; 10,000 lbs Cape at 25 1/2 c; 4,000 lbs Montevideo at 26 1/2 c; 20,000 lbs Territory at 19 @ 20c; 8,000 lbs scoured Texas, 50,000 lbs spring California, 5,000 lbs Australian, 10,000 lbs combing pulled, 111 bags scoured, 73 bales East India and 82,000 lbs domestic, on private terms.

Bottom reports dull trade with easier prices, the sales showing 85,000 lbs of spring California; Oregon, 2,775,000 lbs; California fall, 938,000 lbs of other domestic kinds and 746,000 lbs of foreign.

Philadelphia reports an exceptionally dull week with sales of 486,000 lbs. The sales here include 10,000 lbs fall Texas at 15 @ 17 1/2 c; 17,000 lbs ditto at 17 @ 18c; 30,000 lbs ditto at 16 @ 17c; 10,000 lbs medium unwashed fleeces, 26c; 10,000 lbs Au tian, 35 @ 40c; 11,000 lbs Montevideo, 26 @ 28c; 10,000 lbs Cape, 25 @ 26c.

Eastern Grain Markets.

CHICAGO, April 11.—P. M. —At the close of the market wheat is strong; 75c for April; 79c for May; 80c for June. Corn, steady; 49 1/2 c for April; 53 1/2 c for May; 53 1/2 c for June. Oats, steady; 31 1/2 c for May; 31 1/2 c for June. Rye, dull; 60 1/2 c for May, barley, nominal.

NEW YORK, April 11.—Wheat—93 1/2 c for cash, 91 @ 91 1/2 c for May, 91 1/2 c for June and 89 1/2 c for July.

Miscellaneous.

NEW YORK, April 10.—Mustard seed is nominal. Raisins hold the position actively gained. Two Crowns are selling at \$1.40 @ 1.55. Three Crowns, \$1.75 @ 2. A few London layers are finding buyers at from \$2.30 @ 2.35. Valencias are firmer. Hops remain the improverment lately noted, although sales are light. The best grades are regarded as good property to hold. Salt is selling at from 8 @ 14c; new Pacific at from 6 @ 12c; but samples must have a good color to make the outside price.

Local Markets.

BAGS—The market is reported strong, but buying is slow, owing to the dry weather. Calcuttas spot are quoted at 8c; June or July delivery, 8 1/2 @ 8 3/4 c.

BARLEY—In the sample market the consumptive demand has been good; in excess of receipts. In futures, the bears on Call kept prices down, notwithstanding the dry, unfavorable crop weather up to yesterday, when higher prices obtained. They succeeded in bearing the market by reporting heavy stocks in the country. At to-day's Call transactions are reported as follows:

Morning Session: Buyer season—300 tons, 79 1/2 c; 200, 80c. Buyer 1888—100 tons, 89 1/2 c; 100, 89 1/2 c; 100, 89 1/2 c; 100, 89 1/2 c. **Afternoon Session:** Buyer season—400 tons, 80c. Seller 1888—100 tons, 76 1/2 c. Buyer 1888—200 tons, 89 1/2 c; 600, 89 1/2 c; 200, 90c @ cll.

BUTTER—The market strengthened, owing to lighter receipts caused by dairy packing. Several large dairies will not pack when they can sell at 20c or over. Their course is due to the fact that this season more butter will come in tubs from the West than came last season, and consequently the market will be supplied chiefly from that source, and low prices for pack obtain. The market closed firm for fresh rolls, with several houses well cleaned up.

CHEESE—The market, under free receipts and a light call, continues to shade off, closing weak at quotations.

EGGS—The market held up well throughout the week. Hot weather is causing buyers to discriminate more closely.

FLOUR—The market is steady, with a fair demand reported.

WHEAT—In the sample market trading in shipping grades has been light, but in milling there was more doing, and at prices above the quotations of the daily press. In futures, on Call, transactions (cross orders chiefly) were large, with buyers evidently trying to keep prices down, which they succeeded in doing up to yesterday. At to-day's Call the following are the reported sales:

Morning Session: Buyer season—300 tons, \$1.30; 200, \$1.30 1/2; 100, \$1.31. Buyer 1888—300 tons, \$1.38 1/2; 500, \$1.38 1/2; 400, \$1.39; 300, \$1.39 1/2; 200, \$1.39 1/2; 100, \$1.39 1/2; 300, \$1.39 1/2 @ cll. **Afternoon Session:** Buyer season—100 tons, \$1.30 1/2; 100, \$1.30 1/2; 100, \$1.30 1/2. Buyer 1888—300 tons, \$1.39 @ cll.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to April 9, '87.	July 1, '87 to April 7, '88.
Flour, qr. sks.....	3,634,044	2,915,266
Wheat, cts.....	11,146,370	7,606,561
Barley, cts.....	1,990,661	1,956,993
Oats, cts.....	116,888	145,945
Potatoes, sks.....	719,080	938,201
Corn, cts.....	79,484	183,736

Hides, No.....	26,493	23,956
Rye, cts.....	4,798
Potatoes, sks.....	111,252	71,855

Cereals.

The United Kingdom's total supply of wheat and wheat flour imported and home wheat delivered in 206 days ended March 24, 1888, has been equal to 119,943,681 bu. of wheat, comprising 75,362,573 bu. foreign wheat and flour imported and 44,581,108 bu. home wheat delivered. The supply in the 206 days ended March 24, 1888, has been at the rate of 212,510,000. The estimated annual consumption of the kingdom is from 208,000,000 to 212,000,000 bu. Calling the seeding requirements 6,000,000 bu., there remains to be deducted for food 25,703,832 bu. There was on passage for the United Kingdom March 28, 1888, 16,488,000 bu. On the basis of 208,000,000 bu. annual consumption there will be required to purchase in and ship from all foreign countries from March 24th to August 31, 1888, 45,864,487 bu. of wheat and flour together, and at 212,000,000 bu. consumption the required quantity to be purchased and shipped will be only 49,864,487 bu. to supplement the quantity on hand and on the way. The quantity to supplement may be increased by the amount that will be taken off coast for continent and quantity exported in the year, both of which may equal 3,500,000 bu. Up to about the end of January, shipping engagements at Melbourne, Australia, had been limited. Freight to United Kingdom are 30s. to 35s. per ton. Wheat at Melbourne was 2s. 11d. to 3s. 2 1/2 d. per 60 lbs. The farmers are slow to accept these prices, and do not hasten wheat shipments from the interior to the shipping ports.

The quantity of foreign wheat on passage for France, March 16, 1888, 360,000 bu., excluding Marseilles, against 1,590,000 bu. a year ago.

The quantity of wheat on passage to Belgium March 16, 1888, was 440,000 bu., against 880,000 a year ago.

The final definite result of the Hungarian wheat crop of 1888 is 116,107,249 bu., against 118,949,255 bu., reckoned as the preliminary estimate.

The decline in the value of the Russian rouble has tended to facilitate wheat and maize exportation from Russia, but trouble from ice in the Black sea ports has tended to check the outward grain movement from Russian ports.

Roumanian grain production and grain export is assuming increased importance. The wheat area of

Roumania in 1887 was 2,200,000 acres and the yield 61,000,000 bushels, the yield varying from 15 to 45 bushels per acre and the average 28 bushels per acre. The rye and barley crops were good, but the maize crop was deficient, the failure being complete in some districts. The total quantity of grain exported in 1887 from Roumanian ports was 62,738,592 bushels, against 49,958,248 bushels in 1886, being an increase of more than one-quarter in 1887 over 1886. The vessels navigating the Danube in 1887 averaged 717 tons, against 576 tons in 1883. The total tonnage in 1887 was 1,203,683 tons, against 950,657 tons, the largest previous record, in 1886, of which the British shipping was 66 per cent, the Greek 10 per cent, the Austria-Hungary 6 1/2 per cent, the French 5 1/2 per cent and Italian 3 1/2 per cent. Steamers of over 1300 tons net register and 300 feet in length in 1887 navigated the Danube as far up as Breila. The tonnage of the port of Sulina in 1887 was 28.52 per cent of the whole, against 25.74 per cent in 1886.

Bradstreet's, which has been notorious for working in the interest of wheat-buyers, is constrained to say in its issue of March 31: "The weather has been severe on the wheat in Southern Ohio, Indiana, Kentucky and Illinois, but less so in Missouri and Kansas, and there is reason for believing that much of the reported damage from frost, etc., will be found to have been overrated after warm weather has had an opportunity to make itself felt. The season opens quite late, however, and may delay the winter-wheat harvesting, which would, of course, have the effect of drawing more extensively on our reserves, which promise, in any event, to be the smallest on July 1st for some years." *Bradstreet's* in February last published long rows of statistical figures and worded reports from correspondents going to prove that the United States would have a very large carryover of wheat at the end of the present season, and now being forced to admit that it will be very small, must make the editor feel very small. But then the editor of *Bradstreet's* in working against farmers has plenty of company in the so-called commercial editors or reporters for the daily papers in this city.

On this coast wheat crop advices are not of a satisfactory character, and without rains soon there will be a very general cry of poor yield. In Eastern Washington and Eastern Oregon the outlook is thought will not exceed, if it equals, last year, notwithstanding that an increased acreage was seeded. In western Oregon the outlook does not warrant estimating an average crop. More land is seeded in the Rogue River valley, owing to better railroad facilities.

In this State the wheat crop is far from encouraging. Many localities begin to report the plant looking sickly for the want of rain; other localities, on the other hand, report the plant looking healthy and vigorous, but as the moisture in the land is being evaporated quite rapidly, good soaking rains will be a necessity soon. Although rains can be deferred, in the latter localities, for two or three weeks before the plant shows signs of a very discouraging character, still if they come within the next week or ten days much better results will follow. It is most too early to estimate on the outlook, but it is safe to say that without rains soon, it will not be more than last year, while with but north winds later on it will be cut down still more.

While much of the remarks about the wheat crop is applicable to the barley crop, still the sowing of the latter on lowlands will give us a large output, but not as much as in 1887, owing to the acreage seeded not being so large. There can be no doubt but an increased acreage will be cut for hay, which will tell in reducing the total yield.

In the wheat market buyers have been bearing prices by cross orders on Call and in other ways better known to them. As the crop prospects are not so encouraging, holders of wheat are disposed to await future developments before offering to sell. Choice wheat is scarce and hard to get except by bidding well. Millers are compelled to pay \$1.37 1/2 for choice, not gilt-edged. This price was paid to McIntosh at Nelson by a miller. The grade was barely choice. While buyers quote to the daily press low prices, they pay for straight parcels from 2 1/2 @ 5c per cental more. Oregon continues to send us Willamette valley wheat which costs delivered on the wharf from \$1.38 1/2 @ 1.41 1/2 per cental.

The barley market has ruled firmer the past week, notwithstanding buyers both on Call and in the open market did all they could to cheapen prices, and, of course, they were ably assisted by the daily press in their commercial columns. Receipts of barley were light, not up to the consumptive requirements, consequently the reserve stock has been drawn on quite freely, which will cause a decided shrinkage by May 1. The warmer weather has caused more sampling by brewers, but so far as can be ascertained the buying was light.

In oats the demand was light, owing to a weaker tone for off grades. Choice grades continue in light supply and command relatively higher prices.

Corn continues irregular but with a strong tone. Any buying demand advances prices and any selling pressure causes a shading off.

Rye continues weak and in buyers' favor.

Feedstuff.

Light supplies, a good demand and a free demand, combined with dry weather, cause hay to rule strong at full prices. Alfalfa and the poorer grades are slow, but good to choice are wanted.

In ground feed there is a good demand, but continued free receipts of bran and middlings from Oregon keep values steady. Ground barley and feedmeal are firm, with a continued good demand for the former.

Fruits.

Apples are not quotable. In citrus fruits, the market continues overstocked with poor, inferior oranges, lemons and limes. Choice, well-selected, good-keeping oranges and limes are wanted. The warm weather of the past few days stimulated the consumption. From up North there is a good demand.

Pineapples are in heavy supply and lower. The first gooseberries of the season came in yesterday and fetched 25 cents per lb. F. Baumberger at Haywards was the grower.

Straubers are coming in more freely, with the quality greatly improved. Prices are shading, as buyers, owing to the warm weather, only purchase in small quantities, believing that the forcing weather will ripen the fruit rapidly.

The fruit crop, as near as can be learned at present, will be as follows: Apricots short, plums and

prunes large, pears average; peaches will be above an average, owing to more trees bearing. For apricots 2 to 3 cents is asked by nurserymen.

The market on this coast is about bare of raisins, while the stock at the East is passing rapidly into consumers' hands.

The grape crop, at present, looks very encouraging for a large yield and of a superior quality, too. Wine grapes and raisin grapes will command more money, for both wines and raisins are higher with stocks light.

In dried fruits, the market is nearly bare of choice bright, while off-colored are going into consumption quite fast. Apples are scarce and strengthening, under a good demand. It now looks as if the market will be cleaned up of all kinds before the new crop comes in.

Vegetables.

Garden truck is coming in more freely, owing to the warm, forcing weather.

The receipts of asparagus, peas and rhubarb the past week were quite heavy, but prices kept well up. Cucumbers are coming in more freely, with prices shading. Tomatoes are in light receipt as yet, but heavier supplies are looked for soon.

New potatoes make a much better showing both in quantity and quality. Some engagements are said to be made for early shipment to points west of the Missouri river. The crop this year will be large.

Old potatoes, except for seed purposes, are slow and low. For seed, some varieties sell well.

Onions have ruled fairly steady throughout the week. The crop this year promises to be large.

Live-Stock.

Under free offerings, bullocks are a shade lower, with a weak tone at the close. The introduction in Los Angeles of dressed meats from the West and the offering of dressed meats from the same section on this market is against sellers of live-stock. Mutton sheep are weak and lower, under freer selling. Calves and lambs are easier. Hogs are a shade weaker. Hard grain-fed fetches 6 1/2 c. Very few dairy-fed are coming in, yet those coming in sell at from 6 1/2 c to 9 1/2 c, according to size and condition—block hogs fetching the most money. Cows sell readily at \$30 to \$40 for the dairy, and \$40 to \$60 for family use. In horses, there is a good demand for single-footers, driving animals, matched teams and general utility horses. Where animals combine the desired color, freedom of motion and are lively, but not fractious and hard to manage, they find buyers at good prices. Some have been sold lately at an advance on last quotations, but they meet the buyers' views in almost all essential points.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6 1/2 @ 6 3/4 c per lb.; dressed 9 @ 9 1/2 c per lb.; soft, 5 1/2 @ 6 c per lb.; dressed, 7 1/2 @ 8 c per lb. Stock hogs, 3 1/2 @ 5c per lb.

BEEF—Stall-fed, 8c per lb.; grass-fed, extra, 7 1/2 c per lb.; first quality, 7c @ — per lb.; second quality, 6 1/2 @ — per lb.; third quality, 5 @ 6c per lb.

VEAL—Choice, 9 @ 10c per lb.; fair to good, 7 @ 8c per lb.

MUTTON—Wethers, 7 1/2 @ 8c per lb.; ewes, 7 @ 7 1/2 c per lb.; lamb-spring, 10 @ 12 1/2 c per lb.

Miscellaneous.

Poultry continues to rule high for the season, under light receipts and a good demand. Some dressed came in from Omaha, but were readily placed.

Beans have a stronger tone, with holders asking more money. The demand is good.

In honey, there is nothing new to report. It is claimed that the crop will be large and of superior quality.

In hops, the warm weather has stimulated the demand. The stock of choice on the market is light.

In wools, there is absolutely nothing doing. A few straggling clips are coming in, but until receipts increase more rapidly, trading will be slow. It looks as if medium and fine wools will do well, as the supply at the East is light.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	403,861	206,916
In port, disengaged.....	53,259	102,089
In port, engaged.....	7,856	16,820

Totals..... 464,976 325,825
To obtain the carrying capacity, add 60 per cent to the tonnage.

Tonnage on the way to Oregon, 22,835; tonnage at Portland, Oregon, loading and to load, 19,572. Total tonnage, 42,407.

San Francisco, April 11, 1888.

To Every Pump Maker,

Owner! Runner! Agent!

If there is ANY PRACTICAL QUESTION concerning ANY APPLICATION or ANY ADJUSTMENT of ANY KIND of a PUMP which is not answered in Mr. ROBERT GRIMSHAW'S PUMP CATECHISM,* we would like to have it for answer in the next edition or volume.

The Author will answer any such question in our columns, if addressed in our care, by a regular mail subscriber to our paper. "Catch" questions invited, if they have a practical bearing.

*Tells, for instance, how to put entirely together, set up, adjust, and run all the leading pumps in the market. This information can be had in no other shape or place. Price of the book, post-paid, only \$1, and worth \$5.

Serious Loss of Horses at Palo Alto.

All lovers of the noble animal will be pained to hear of a disastrous fire at the Palo Alto stables of Senator Stanford in which six animals perished and two others suffered severe injury by the flames. Palo Alto stables were planned to reduce danger from fire to a minimum without using fire-proof materials. The buildings were but one-story sheds, the floors of earth well tamped and no inflammable material was allowed to remain except such as was absolutely necessary for feed and bedding. With such precautions and the continual patrol of a watchman, a fire seemed very unlikely to occur, and in fact seems unaccountable except on the theory of incendiarism.

But a fire did break out about midnight Tuesday night just after the watchman had passed the locality and found everything in proper order. He had not reached his room before the presence of fire was discovered, and almost before the stablemen could raise a cry the one-story wooden sheds were blazing fiercely. Every person on the farm ran to the barns to try to liberate the racers, but almost before a door could be opened the heat had driven the men back, and they were forced to witness the cremation of the horses without being able to lift a hand to save them.

As we go to press on Wednesday, the following statement of the deplorable results of the fire is received: Burned to death—California Belle, four years old, dam Claribel, by Abdallah Star, 2:24; Rexford, three years old, dam Rebecca, by Gen. Benton, 2:24; Maiden, three years old, dam May Queen, by Alexander's Norman, 2:23; Norlaine, yearling, dam Norma, by Alexander's Norman, 2:31½. Also, the colts Emma Robertson, Troubadour, Lowell, and Howard.

Seriously burned but still living on Wednesday—Palo Alto, dam Dame Winnie, by Planet, 2:20½. Manzanita, dam Mayflower, by St. Clair (fastest to date), 2:16.

It will be seen that the stable contained some of the most rapid travelers on the turf, and there are not many sportsmen in the country who will not feel a pang of regret at the death of the animals, and a shock at the manner in which it was encompassed. It will be rather the sentimental than the pecuniary aspects of the loss which will affect Senator Stanford, for he is famed for his love of his animals.

A Fine Percheron.

We give on this page a very striking portrait of an imported Percheron, "King of Perche," a horse which has made a remarkably fair record, considering his brief residence in this country. The horse is the property of W. L. Ellwood of De Kalb, Illinois, who says he has refused \$5000 for him. King of Perche, 4975 (6738), is a worthy specimen of his race. He

IMPORTED PERCHERON STALLION KING OF PERCHE.

is a jet black, and a very fine-styled horse. Imported in July, 1886, he won first premium in the four-year-old class of the great Percheron show held in Chicago last September. He has also won sweepstake premiums at the Nebraska and Illinois State fairs, and the first premium at the St. Louis fair in the four-year-old and over class.

King of Perche was foaled in April, 1882; bred by M. Brault, commune of Brosse, canton of Thiel. Sire, Cheri (6746), owned by Chas. Avelin, he by Favors (725), he by Favori I (711), he by Vieux Chaslin (713), he by Coco (712), he by Mignon (715), he by Jean-la-Blanc (739), etc. Dam, Rustique (6737), owned by M. Brault, she by Superior (730), he by Favori I (711), described above.

The artist has succeeded in presenting the horse in a very spirited pose, and shows his excellent points and proportions well.

A SALOON having started north of the city limits of Pasadena, the citizens of that section met in mass meeting and decided to annex to Pasadena, thus extending the city corporate limits nine square miles.

AUSTRALIAN PARASITES OF THE FLUTED SCALE.—A peculiar little tin box, all the way from Australia, was received this week by W. G. Klee, State Inspector of Fruit Pests. It contained several parasites, which destroy the *orthesia*, a scale closely allied to the white, cottony cushion scale bug so destructive to fruit trees. There were also in the box some of these scales on which the parasites prey. Several of the scales were dead and their bodies

perforated with tiny holes, where the parasites had left after killing them. This method of destroying the bug pest has not yet been tried in California, and the intended experiment will prove very interesting. The parasites received by Mr. Klee will be propagated by Mr. Kooble in Alameda, and if successful in this climate as they have been in Australia, immediate steps will be taken to spread them over the State.

It is proposed now to carry into effect the original proposition of making a large canal bringing water from the American river to the town of Folsom. It is to be six feet deep, 32 feet wide and with a fall of nearly a hundred feet. This will give employment to prisoners and give power for manufacturing purposes, and make Folsom a manufacturing town with unlimited water-power. The canal will also furnish water to irrigate a large tract of land.

THE four Assistant Commissioners to the Melbourne Exposition will be F. B. Wheeler of New York, L. R. Miller of Lynchburg, Va., Mr. Stevens of Boston, and Mr. Kemble of New Orleans. The Chief Commissioner is Frank McCoppin of San Francisco.

Cactus for Fodder.

We recently referred to the food value of cactus pads or fleshy leaves as determined by chemical analysis of their substance. We also had a letter from a Texas correspondent, describing her experience. A few days ago the Experiment Station at Berkeley received a letter from E. H. Carr of Kerrville, Texas, who is an amateur experimenter with grains and forage plants, telling his experience in feeding cactus pads and general facts concerning the practice. He commonly fed boiled cotton-seed to cows in milk, but his supply of seed running low he began giving one ration of seed and one of cactus, burning off thorns and chopping up the leaves.

He writes that the Mexican people have for many generations been in the habit of feeding prickly pear to cattle, sheep and goats, but it never attracted much attention on the Texas side of the line until Dr. Carr, the s, in the winter of 1886 and '87, fed a large number of beeves on prickly pear and cottonseed meal and sold them in Chicago. Mr. Carr writes that there are now machines made in Texas for burning the thorns off the whole plant, where it grows, with crude petroleum, and another for crushing the leaves and feeding

without burning. Most of the cactus which Mr. Carr fed this year was from a single plant which he had started himself. The pads of the last year's growth root easily if stuck in the ground. He believes that cactus has as much nutriment as turnips, and perhaps more, and that on millions of acres in Southern California, Arizona, Nevada, New Mexico and Western Texas the prickly pear may be a valuable auxiliary to the stockmen to carry stock through a season of drouth.

REDDING is the shipping point for large quantities of the wool clip of Modoc and Lassen counties and southeastern Oregon, and has abundant water-power for manufacturing purposes. It is expected that the company to build the proposed woolen-mill will be formed with \$100,000 capital, half paid up.

A WINE STORAGE cellar to be built of stone and cost \$350,000 has been commenced at St. Helena, Napa Co.

MANY acres of eucalyptus trees are being planted for fuel in the Santa Ana valley.

HORTICULTURE.

The Santa Barbara Convention.

(Specially reported for the RURAL PRESS.)

In the beautiful town of Santa Barbara, there opened on April 9th the Ninth Annual Convention of California Fruit-Growers. Mr. Ellwood Cooper, president of the State Board of Horticulture, was in the chair when the meeting was opened in the afternoon, with prayer by Rev. N. R. Peck. Messrs. Edward Iveson and H. C. Ford were elected vice-presidents and A. E. Putnam assistant secretary, Mr. B. M. Lelong of the State Board being secretary.

President Cooper appointed the following Committee on Program to outline the work of the convention: Sol. Runyon of Courtland, Sacramento county, Captain Robinson, Ojai valley, and Joseph Sexton, Goleta. President Cooper then delivered his opening address, of which we give the following extracts:

President Cooper's Address.

This will be the ninth Fruit-Growers' Convention and the fifth held under the auspices of the State Board of Horticulture.

I have noticed in the vicinity of Santa Barbara quite a number of English walnuts and other fruit trees being planted on land recently covered with live-oaks. These orchards can only result in failures, which the owners can ill afford.

Samples of the same varieties of prunes, peaches and apricots were shown me when last in San Francisco. The one in demand at high prices, the other dull of sale at probably half price. Drying fruit successfully and putting it on the market in good condition is the key to successful fruit-growing. The discussions at the Santa Rosa Convention were more full on this subject than at any previous convention, so that I call your attention to the same and especially to the remarks of Mr. Hayden of San Francisco and Mr. Gladden of Healdsburg.

In Consular Report Vol. 67, page 476, our commercial agent at Mayaguez says: "If you want dried apples, the American fruit is first offered to you, while a long string of adjectives is thrown off at you in praise of it. These apples are to be met with almost everywhere, and are preferred to all others on account of the excellence with which they are dried, and for their cheapness."

The questions of greater importance to be considered at the convention are first, insect pests; second, distribution and drying as accessory to the distribution. In a few years more we will have ten times as much fruit as now, and it is necessary that we combine to increase the demand; as a very important part of the marketing I would encourage the further investigation and application of cold storage. With this aid our marketing period can be more than doubled.

Insect Pests.—The *Icerya purchasi*, or fluted scale, has assumed very alarming proportions in the vicinity of Santa Barbara. There is nothing practically being done to eradicate this pest beyond the city limits. Our community does not comprehend the danger that awaits them. Some radical measure should be adopted to arrest the spread of this insect.

I recommend the appointment of a committee to visit the orchards of S. P. Stow and the Hollister estate, and report to this convention that we may take action regarding the same. I trust there will be some reports made of the experiments with gas in Los Angeles county. I do not wish to be considered an alarmist, but I beg leave to call your attention to what has been done in New Zealand regarding the rabbit pest. I quote from Consul Campbell of Auckland, Vol. 88, page 150:

"The rabbit pest is the greatest evil that has afflicted the Australian colonies, and perhaps no greater evil has ever come upon any country. To eradicate it from New Zealand has been the constant aim of Government and people, and the ways and means devised and put in operation to this end have been numerous and ingenious. A rabbit department has been established in the Government, with a superintendent in charge, local boards have been created and private enterprises set on foot, all having one common object in view—the extermination of the rabbits. They have eaten out the ranges so that the capacity for maintaining sheep has greatly lessened. The loss has been immense, running up into millions. At the Australian stock conference held in Sydney in October, 1886, it was shown that the carrying capacity of the land had been reduced a third, and the weights of fleeces had decreased from one pound to one pound and a half each fleece. The lambing percentage had decreased from 30 to 40 per cent, while the death rate increased from 3, 4, 5 and 6 to 10, 11, 12 and 13 per cent. In 1882 what is known as 'the Rabbit Act' became a law; since then the Government has expended annually \$35,000 on the Government lands alone and it was estimated that \$1,250,000 was expended annually by private individuals. During the last eight years there has been expended the sum of \$12,000,000 and a very much larger sum from the beginning of the war."

We have quite frequently of late read accounts of rabbit-drives in the San Joaquin, which have been attended with considerable sport, people

going from long distances to enjoy the fun. It is not my desire, nor do I wish to be understood as underestimating the rabbit plague in New Zealand or in the San Joaquin, but I do not hesitate to predict that the *Icerya* in California, unless soon arrested, will be worse than the rabbit plague in New Zealand. You cannot drive it, there is no sport or fun connected with fighting it; on the contrary, every one going into badly infected districts will turn away with disgust.

The *Coccus Oleæ* or *Lecanium Oleæ*, commonly known as the black scale. No new developments since reports made at the Santa Rosa Convention. The rainstorms this winter made it impossible to get on the ground during the months of January and February. No other insects excepting the above have made their appearance to create alarm so far as I have heard.

Fruit Unions.

There is no branch of the business that requires such united effort as the distribution. Without fruit unions we cannot make a financial success. We cannot grow too much fruit if it is properly distributed. The shipping of ripe fruits must not be in over quantities to any one market, but in such quantities as will be eagerly taken up for immediate consumption. Every market that will take one carload must be sought out. Trainloads can be divided at the Missouri river, and from there go to the place of destination by the most direct trunk line. It cannot be managed with success if each individual fruit-grower undertakes to ship his own fruit. It must be from a central office where a careful record is kept of fruit demands in every market, and shipments directed from that office.

The sooner fruit-growers realize this fact the better. Trees are planted by the million every year. The fruit product will be enormous, and if we do not have the knowledge of distribution perfected, serious losses must result. The drying can be carried on with the ripe fruit shipping. In fact this is the safety valve of the whole business. Ship all the ripe fruit the market will bear—dry the rest. The central office ought also to manage the dried fruit. There is no reason why any market should be overstocked with dried fruit; a suitable warehouse can be obtained where advances can be made on dried fruits and thus relieve the necessity of forcing sales. Our knowledge as to growing fruits is well advanced, we are to a certain extent well informed. Drying and canning the same. The kinds, varieties and localities the same. The manner of packing has almost reached perfection, so that we are now in the advanced stage of discussion on these points.

Sulphuring.

The sulphuring in the process of curing or drying fruits was denounced in quite an animated discussion at the Santa Rosa Convention. It was claimed by some that there was danger of poison; from others objections are made from a moral standpoint. The remarks were mostly made from statements that were without foundation in experimental facts. I have taken some pains to investigate what does result from the fumes of sulphur. It is evident to my mind that sulphuring English walnuts unless done with great care will injure them. The two lobes in more than half the nuts are not so close but that the fumes enter and seem to unite with the oil of the kernel, so that this contact will cause them to become rancid in a few months. With the almond there does not appear to be any danger.

Freight Rates on Fruits.

The Chamber of Commerce appointed a committee to act in conjunction with a committee appointed by the California Fruit Union to obtain the best possible rates from the railroad companies. The fruit-growers at the late Santa Rosa Convention also appointed a committee to act with the above committees. Our committee was composed of James Betner, Geo. F. Hooper and S. J. Stables. I recommend their continuance.

Protection to the Fruit Industry.

The Mills bill, now before Congress, puts on the free-list oranges, almonds and walnuts, and reduces the duty on raisins and prunes. I recommend that this convention respectfully protest against any change in the present tariff duties so far as it affects the fruits produced in California. The duty on almonds is five cents per pound, walnuts, 3 cents, oranges, \$1.60 per 1000. As I am a large grower of almonds and walnuts, I seriously object to any reduction in the duty. The average net price that I have received for the past five years is, for almonds, 10 9-100 cents per pound, for walnuts, 8 10. Presuming that there would be a decline equal to the duty, I should at once root out my almond trees because there could be no profit at these reduced prices. Were it even probable that by the reduction of five cents a pound our people who purchase these nuts would continue to save this amount on what they purchased, there would be some reason for the reduction. But on examination, I learn from my former agent in San Francisco who was in the shipping business, and who received consignments of these goods, that the lowest price he ever received for almonds was 22 cents. During the first years of the California production the uniform price was 25 cents. As soon, however, as more was produced than our home market would take, a rapid decline to less than one-half said price took place. They have been sold as low as 11 cents. Remove the duty

and European producers would drive us out of the business and then put up the price to former figures.

Prices of Labor.

I have taken some pains to investigate the value of labor, or the prices paid for labor, in countries where we have competitors, or may have competitors.

West India Islands—Barbadoes, Consul Reed in Vol. 86, page 248, gives the price of labor 20 cents per day for men and 15 cents for women. Antigua, Consul Jackson, in Vol. 69, page 160, men 20 to 24 cents, women much less. Guadeloupe, Consul Bartlett in the same volume, page 163, men 22 cents, women 18 1/2. Cuba, Consul Pierce, Vol. 65, page 267, men slaves \$3 per month, free men \$4.25. On the western end of San Domingo, where I lived and did business for a period of 10 years, and was for a time joint owner of a sugar plantation, we paid men 16 cents, women from 12 to 14 cents, and they boarded themselves. Italy, Consul Toukay, Vol. 69, page 123, men 120 francs per year, equal to \$22.50, with some perquisites which are estimated by the same Consul, page 124, to be worth from 40 to 60 francs per year, or about \$3, making but little over \$25 for a year's work. Near Rome, Consul Alden, Vol. 76, page 120, 20 to 40 cents, not including board. Catalonia, Consul Schenck, Vol. 70, page 243, 40 cents per day. Marseilles, Consul Mason, Vol. 70, page 215, \$5 to \$9 per month; \$7 would be a fair average. Morocco, Consul Mathews, Vol. 69, page 184, 5 to 20 cents per day. Hawaiian Islands, Consul Putnam, Vol. 69, page 140, men \$9 per month, women \$6.

I might pursue this investigation to much greater length, but do not consider it important to do so. I will, however, state that about the same rates exist on the west coast of South America, and less rates from Mexico to the Isthmus of Darien or Panama. One other fact I wish to state, although not pertinent to the fruit industry of California. Consul Mason of Dresden in the volume entitled "Labor in Europe," page 16, writes: "An important factor in the labor of Germany is not inquired of in the circular, viz., the labor of dogs. I have heard it estimated that women and dogs harnessed together do more hauling than the railroads and all other modes of conveyance of goods united. Hundreds of small wagons can be seen every day on all the roads leading to and from Dresden, each having a dog for the 'near' horse harnessed, while the 'off horse' is a woman with her left hand grasping the wagon tongue to give it direction, and the right hand passed through a loop in the rope which is attached to the axle, binding the shoulder; thus harnessed, woman and dog trudge along together, pulling miraculous loads in all sorts of weather." I mention this merely to show the difference between our American system and the system of some other countries.

We quite frequently hear of syndicates being formed to purchase large landed districts in Mexico for the purpose of orange-growing. Not at \$1000, \$1200 to \$1500 per acre, as at Riverside, or at \$1000 per acre in the San Gabriel valley, or at \$500 per acre in Goleta, this country, but at \$1 and less, with the most favored spots at less than \$10 per acre. There is not only this difference in the cost of land and price of labor, but the command that those governments have over the laborers. Consul Herring of Honduras, Central America, Vol. 82, page 288, writes: "A strike was attempted once; the strikers were hunted and arrested by soldiers or policemen, under orders from the Government authorities, given a sound flogging, and sent back to their work." Rather a summary way to solve the great problem, yet it worked like a charm.

Work of the Board of Horticulture.

It is now about seven years since the creation of the State Board of Horticulture. I had the honor of being a member of the first board, and was present at the first meeting. When I look back to that period, knowing the crude state from which we developed, the difficulties we had to encounter and our own inexperience during the first years of our organization, it is with feelings of pride that I appear before you to-day. At that time fruit-growers were groping in the dark, their operations were mere experiments, the results uncertain. To day there is no uncertainty among the intelligent fruit-growers, many branches of the industry is now a science well mastered.

I venture the assertion that nowhere in the world is the business so generally and so well understood as in California.

The dissemination of important knowledge, the progress made, has reached the most isolated fruit gardens, as well as the most princely orchards. Fruit-growers vie with each other to discover new facts and to disseminate them. We are united. Our mutual efforts have secured for us in the past year a success beyond our most sanguine expectations. I do not claim this credit on the part of the board. All interested fruit-growers have contributed. It is the result of our united efforts.

The board has been subjected to the most stinging criticisms, and very possibly deservedly so. But what other organization, State or otherwise, can show better results? We have given our time and our money almost without compensation.

I have served for seven years to the best of my ability, devoting much of my time with considerable money, and think that I should be relieved and some other put in my place.

Ladies and gentlemen, members of this con-

vention, all these questions are submitted for your consideration.

After the conclusion of Mr. Cooper's address, which was heartily applauded, Hon. Russell Heath, of Carpinteria, delivered the following

Address of Welcome.

In considering agriculture and horticulture in Santa Barbara, it will be necessary to speak of the early efforts of that devoted body of men who came to the coast under the auspices of the Catholic church, particularly protected and encouraged by the King of Spain, who then claimed this vast territory. As a body of missionaries they came to civilize the Indian tribes; but their great distance from their own country rendered it necessary for their own support and the support of their converts that the land should be cultivated. Not content with the ordinary cereals for bread and food, the habits and tastes acquired in their own favored Spain induced them to try the choicest of the fruits of their own and neighboring countries; to these wants, necessities, and desires we are indebted for the introduction of the pomegranate, fig, date, apple, pear, grape, orange, lemon, lime, olive, and the nut-bearing trees of the Mission gardens. Here it was that wheat was cultivated and manufactured into flour for the use of the different parts of the coast. From the propagating gardens established here were distributed the trees, vines and shrubs to other Mission establishments; here the sheep were cared for whose fleeces were manufactured into clothing and blankets for the priests, converts, and soldiers stationed for their protection. When we consider that this occurred 100 years ago, agriculture and horticulture can hardly be said to be in their infancy; and when we consider that at one time this Mission had under its care and instruction 3000 Indians, we must conclude that their operations must have been conducted systematically and on a grand scale. Everything had to be produced, houses built, animals raised, and subjected to toil, implements of every description manufactured. Am I saying too much, then, when I say we are greatly indebted to those missionary priests for their experiments in this new and untried land?

These things, great though they were, were destined to have an end. Revolution, the destroyer of civilization, came. The Spanish of the Americas declared their independence from Spain. The Missions were despoiled of their hard earnings and left without means of supporting themselves or the Indians. All sank into poverty together. Thus things continued until fortune finally placed our own republic in possession of our Golden State. Some time was spent in mining for the precious metals; but the ever-restless Americans soon learned that in the soil was to be found what in reality would make California one of the brightest of the American constellation. Under this new order of things Santa Barbara's first Agricultural and Horticultural Society was formed in 1856, with a membership, if my memory serves me right, of about 25, and James Ord, now stationed in Arizona, as its first president. But few of the old members still remain. From that year dates this new era in agriculture. Orchards and vineyards commenced to be planted. The thread dropped by the Mission Fathers was taken up by the American settler. All of the choice fruits of our own country have been experimented with. Europe, Asia, Africa and the islands of the sea have been called upon to increase our store. You will be able to judge with what success this work has been prosecuted when you examine the exhibition of the society. Remember this is not the time of year when we have our fruits fresh and in perfection. Such as we have, we welcome you to. In the name of the Horticultural Society, I welcome you to our society, city and county. We claim no superiority over our neighbors of other counties. We are striving to keep pace with others. The laggard has no place with us. We indulge the hope that you may see enough in our county to please and interest you, and when you shall have returned to your distant homes that some slight recollection may remain of your brethren in horticulture in Santa Barbara county. Again I welcome you.

[Other papers and addresses before the convention will be given in subsequent issues.—EDS. PRESS.]

THE APIARY.

No More Extracted Honey.

The fact cannot be denied that the beekeepers of California have for several years past been having a pretty hard time of it. We have seen prices go down gradually, year after year, until now they are so low that there is absolutely no profit in the business, at least so far as the production of the extracted article is concerned. And the decline in price has seemed to have very little reference to the amount produced. Naturally, one would suppose that in seasons of short crops prices would become correspondingly stimulated. But such has not been the case. The price has gradually fallen until two or three cents a pound is about the limit of the price received by the producer, and one does not need to know that at such absurdly low prices there is no profit for the beekeeper. There seems to be some insuperable

objection among the majority of people against the use of extracted honey. When that article was first put upon the market it was thought possible, and even probable, that its use might become general, and that so pure and healthful an article would quickly take the place of the impure and adulterated molasses, syrups and "drips," which are so largely consumed. Especially was it thought that this would be done when the price for the pure honey was put at a lower figure than those articles could be sold for. But for some reason it has proven all but hopeless to attempt to persuade people generally to become consumers of honey. As a consequence the price has, as already been stated, reached a very low point, both here and in the East, though it was much longer in getting down there than on the Pacific Coast. Now, bee-keepers all over the country are seeking some method by which to make their business profitable. Many of the most experienced bee-keepers of the East have decided that there is nothing to be done except to put a stop to the production of extracted honey and devote their entire time to the comb. It is now claimed to have been a great mistake to have put the extracted honey at so low a price compared with the comb; but the damage has been done, and it was based upon the idea that the bees could make about three pounds of extracted honey to one pound of comb honey, and that therefore the relative prices should be about in the same proportion. But this does not work very well in practice, for while extracted honey at three cents a pound, no matter in how great quantity it is produced, does not yield a profit, comb honey at eight to ten cents pays very well indeed. As a consequence the advice to stop the production of the extracted article seems to be well founded. It is certainly far better to produce two tons of comb honey that will give a profit of two cents a pound, than to produce six tons of the extracted that has to be sold at a loss.—*San Bernardino Times.*

THE VINEYARD.

Buildings for the Interior Valleys.

The following paper was read by Frank West of Stockton before the Sixth Annual Convention of Viticulturists held under the auspices of the State Commission. The statements apply primarily to wine-cellar, but the same methods are applicable to the construction of warehouse, barns, milkhouses, etc.:

In the erection of cellars in the great interior valleys of California, many obstacles present themselves which are not apparent to those wine growers whose vineyards are located in the smaller valleys or on the hillsides.

We cannot tunnel into the side of a mountain for a cellar, neither have we any stone quarries near at hand—hence we must look to our only available building materials, brick, wood, and adobe. The cost of a cellar built of brick is sufficient to place it beyond the reach of many wine-growers of limited means.

Cellars can be constructed of wood, double-walled, which will, perhaps, keep a moderately low temperature, but the very fact that all wooden buildings are subject to a heavy fire risk, places them out of the question, except, perhaps, for fermenting-houses, where very little valuable property is stored except during the vintage season.

We now turn to the adobe, which seems to be really the only cheap and serviceable material for the construction of storage cellars in the hot valleys of the interior. Their durability has been thoroughly proven in the old Spanish Missions built of this material so long ago, many of which are even now in very good repair. As a non-conductor of heat, they are unquestionably better than brick, and cellars can easily be constructed which will maintain a temperature not exceeding 60° to 65° even during our hottest months. With the exception of our own cellars at Stockton, and those at the various vineyards around Fresno, I have never seen any adobe cellars in the State, and a few facts concerning their cost and construction will perhaps be of interest.

Foundation.

It is policy in all cases to put a foundation of brick or concrete under an adobe building, and if gravel or good hardpan is at hand to be used in making concrete, that is by all means the cheaper and better material to use. Broken rock or "clinkers" from brickyards may be used. Concrete is cheaper for the reason that it can be laid quicker and no skilled labor is required. A few small experiments will soon demonstrate to any practical man what proportions of cement mixed with gravel or other material will make the best union. We generally use one part cement to eight or nine parts of moderately coarse gravel.

The depth of the foundation must probably depend upon the location of the building, but we have found a foot of concrete 22 inches wide sufficient to sustain the walls of a cellar 14 feet high and 18 inches thick. The concrete should come a little above the surface of the ground to keep the moisture away from the bottom of the adobe wall.

In the manufacture of adobes, which are simply sun-dried bricks, the first step is to find a soil which, either by itself or mixed with sand, will make an adobe which will be hard and at the same time will not crack. This can easily

be accomplished by mixing a small lot of mud, letting it soak over night and molding a few adobes the next day. One day's exposure to the sun will prove whether or not they are going to crack. Great care should be taken not to use soft adobes. I have seen walls built of adobes in which sediment from the rivers had been used in quite a large proportion. The slightest moisture would cause these walls to crumble, and it was almost impossible to protect them from the rain. The regular molds for making adobes are old-fashioned brick molds, but larger in size. The process of manufacture is the same. We have always used adobes 3x6x12 inches, while in Fresno the size is generally 4x8x16. Regarding the comparative merits of these different-sized adobes, I am not prepared to express an opinion.

Adobes of the size first mentioned can be made by contract for \$4.50 to \$5 per M and laid in the wall for \$6 per M by skilled labor. In this connection I would state that skilled labor is not necessary in laying adobes. It is plain, rough work, and any ordinary laboring man will soon learn to lay them as well as a mason. As a proof of this we have in Stockton a cellar built 15 years ago with unskilled labor, the walls of which are as tightly and as well constructed as any we have since had built by masons. However, if one is not prepared to give his personal attention to the work, it is perhaps better to use skilled labor. I make the allusion to unskilled labor for the benefit of those who wish to construct small cellars for the least possible cost, and are prepared to devote their entire time and attention to the details of the work.

Adobes may be laid in either mud or mortar, the latter being more expensive but a little better. To show the comparative cost of brick and adobe, 1000 adobes 3x6x12 can be made and laid for \$11 per M, while bricks 2x4x8 cost with us \$15 per M. An adobe being three times the size of a brick, 1000 adobes at \$11 will occupy the same space as 3000 bricks at \$15 per M, or \$45. Hence an adobe wall costs only about one-quarter as much as one of brick. It may be that adobes of the size used in Fresno will make even a better showing.

The walls of a cellar having been constructed, the next move is to lay the ceiling. The size of the floor joists will depend upon the width of the span between supports.

We use 2x12 timbers 24 inches apart for 20-foot spans. The floor should be of redwood and should be covered with a layer of adobes and mud five or six inches thick. This serves to keep an even temperature, and another great advantage is derived from the fact that there is absolutely no connection between the roof and the woodwork in the cellar. The building is rendered thereby as nearly fire-proof as possible. In fact, experienced firemen have expressed the opinion that the roof of a building so constructed could burn without injury to the interior of the cellar. We have had reference to buildings of one story. The roof of the cellar may be of tin, corrugated iron, shingles or shakes. The latter would be the cheapest material. Roofs should project three or four feet. Unless the walls of any adobe building are protected from the rain by sheds, they must be protected by some coating which will be impervious to water.

Cement is the material generally used, but the objection is raised that it is almost impossible to prevent its cracking, for the reason that cement will not adhere as well to adobe as to brick. A thick coating is usually applied, but from experiments we have recently tried, we are convinced that plain cement mixed with water and applied with a brush is far better, and is certainly cheaper. One barrel of cement is sufficient for 1200 square feet of wall.

At the winery of Webster & Sargent at Min-turn, Fresno county, a mixture of coal-tar, salt, and potash was used, and I am convinced is more serviceable than cement. The proportions were five gallons of coal-tar to one pound of potash, and five pounds of salt dissolved in hot water. This mixture should be heated when applied, an ordinary white-wash brush being used in putting it on. It should be applied in the summer, or at any rate before rain. Two coatings should be used. This, of course, gives the buildings a somber appearance, which many would object to, but cement can now be applied better than before, as it has a harder surface to adhere to.

Many wine-cellar in Fresno are cemented and blocked in imitation of stone, and the finish is certainly very handsome. The work is, however, quite expensive. The appearance of an adobe building can also be improved by putting on a brick front, laying a course of brick in the front of the adobe wall, laying it at the same time. Any design may be selected, and the adobes being connected the whole building has the appearance of brick.

We have adopted this plan in our buildings, erected in the past two years. In conclusion there seems to be no reason why adobe cellars should not be more generally used in this State. They are much cheaper than brick, cost only a little more than wood, and on the whole seem particularly adapted to our wants.

PRESERVING THE BISON FROM EXTINCTION.—It is said that Eugene G. Blackford, N. Y. Commissioner of Fisheries, has become interested in a plan to propagate the American buffalo and will present a pair of them to the Government for breeding purposes. They will be maintained by the Smithsonian Institution in Washington.

POULTRY YARD.

The Hill Lands Good for the Turkeys.

A St. Helena contributor of the *Cackler* writes as follows:

I hear so often the careless remark: "What is the hill land good for?" or, "Keep away from the hills, you cannot make an honest living up there!" Or some say, "I wonder what people do for a living upon that barren hill land." Well, to tell the truth, they do very little, but they might do a great deal. Some keep one or two cows, a few chickens, and the men go off to work in the valley, and earn in this way a little money, may be just enough to keep them alive, as they only live from hand to mouth. How much they could better their condition if they would go to work and raise turkeys and chickens for the market. There are millions of acres of hill land not fit for cultivation near San Francisco and other large cities and towns in California. Land for which, so far, nobody seems to care, and which anybody can claim for a homestead. Why don't people go and take it? Go, instead of crowding the cities and starving to death in the streets. This is my constant wonder. How different would that be in Europe. How delighted would the poor and rich people be with such a free and healthy mountain home! In Europe the poor pay high prices for land rent, and higher prices than here for each article of food, and still they try to raise chickens in great numbers, and make it pay. Why cannot we do the same and much better here? The land is free, or to be had for a calling; feed and breadstuffs and meat are cheaper, while eggs, chickens and turkeys bring much higher prices here than anywhere else in the world; and still so few people go into this business which is so sure to pay. The reason therefore I cannot explain, but the fact remains.

But to the turkeys. What an immense profit can be made with a little care and patience in raising turkeys? Now, the above-mentioned hill land is hardly able to sustain two cows all the year around on 150 acres. Six months the cows will have plenty to eat, and the other half of the year they will be in a starving condition. There is, of course, good hill land, but I am talking of the worst, because that is yet to be had, and is just as good for raising turkeys as any of the better land. Now, this same land that is not able to keep two cows in good condition all the year around, will raise from 300 to 500 turkeys with very little more trouble than the cows require, but with much more profit.

My proposition is: Keep only one cow if you have a family, and need the milk for your children, and with the money that would buy the other one—say \$35 to \$45—buy some 20 turkey hens and two or three strong gobblers, and start in and raise turkeys. Do you or your wife know how to raise chickens? Well, turkeys require not a bit more care. The whole secret of successful turkey-raising I should like to give in the three following sentences:

1. Let the little ones alone.
2. Keep them shut up at night.
3. Keep them free of lice.

Do this and you will have very little trouble. The young turkeys are, the first four weeks, very tender. The touch only of your warm hand may kill them. In this glorious climate, where in the summer months there is no danger of rain, but plenty of warm sunshine, it is wise to leave the little ones entirely to the care of the old hen. She will lead them to places where they find plenty of small insects and honey-dew—the very milk and bread for them. One week running at large will make them stronger than two or three weeks of confinement with the best of care. But keep them shut up at night; you will lose all if you don't. The wild animals, such as wild-cats, foxes, raccoons and skunks, are very plentiful on the hill lands, and are sure to come and kill off every chicken you have. Protect your turkeys against these wild animals. Get some large boxes (if you cannot do any better) from your grocer or dry goods merchant; they make nice coops and cost you very little. Keep them just as nice and clean as you get them from the store, and you will have no trouble with lice. A little whitewash once a month will help you greatly. Wash your coops inside and outside. Don't put any hay or straw in the boxes; the old hen will scratch it out, and some of your small turkeys also. Dry sand or any dry soil is much better and cleaner. As soon as your turkeys get big enough, let them roost on the trees in your yard; that is natural with them. Cut the lowest limbs off, so the fox cannot jump at them, and tie some double-barbed wire around the trunk of the tree; or still better, chain a good dog to it; he will keep off the four and two-legged animals—the latter kind are, in some locations, just as bad if not worse than wild animals.

Have you ever been in the hills—may be on a hunting expedition? then, did you see and do you remember the vast number of grasshoppers you stirred up wherever you went? Well, they are the bread and meat for your turkeys; they are easily digested and the turkeys never get tired eating them. It is amusing to see the turkeys run after them, and you find them the year round on the hills, so you don't need to feed your stock at all; besides, there are always plenty of wild oats, and many kinds of weeds, too numerous to mention. If you don't see all those small seeds your turkeys do, and are sure to find them.

A neighbor of mine sold a band of turkeys about Thanksgiving Day last year, none of them weighing less than 10 pounds. They were raised on very poor hill land. I kept, at the same time, a large flock on valley land, fed them regularly all summer, and none of them weighed over five pounds by Thanksgiving Day, and they were of course not fit for sale, and in the early part of January only half of them weighed from 10 to 14 pounds, and the balance much less. I paid about \$15 for feed, my neighbor not a cent. Does not that show very clearly that the free hill land has a great advantage over a yard in the valley?

On 160 acres of hill land—a homestead claim—you are quite sure to find one or two good springs of pure water, and also a few acres level land, just large enough for a house, garden and yard. Now, why don't you go? Your 500 turkeys bring you a net profit of at least \$500, and you might just as well raise a thousand. Could you not live quite comfortably on five hundred a year? And this is only what your turkeys do for you. You can keep at the same time a few dozen chickens for home consumption or market. You can pay for your groceries with eggs and chickens, if you have any to spare.

Again I must ask you, why don't you go and take up some hill land? I live in the beautiful Napa valley, and I think the hills of this little valley are just what you want. You have the railroads to ship your stock to San Francisco always at hand; but then I see so far no reason to ship to the city. The home market has always a demand for all you can raise, and they pay you higher prices here than they pay you in Frisco, because everybody ships from here to there, and the demand here is so often, consequently, greater than the supply. And so, if you don't know a better place, come to Napa valley, claim a homestead on the hills—there are plenty to be had yet—and raise turkeys and make money.

FLORICULTURE.

Care of Roses.

"Rosa" writes to the *San Rafael Journal* as follows:

It seems strange to me that so little attention is paid to the unsightly disease which so infests our rose bushes. It is by no means an uncommon thing to see a majority of the bushes in our choicest rose gardens infected with the mildew at this season. At a little later day they will be still more unsightly by the changed and sickly foliage. Enough has been said and written about this disease to post any gardener on the subject. The present article is not intended to furnish new material, but only to call attention to what ought to be well known by every one who has a rose bush. I shall not burden you with names of the fungoid diseases of the roses. Suffice it to say that it is a fungus or some one of those parasitic plants. What we need to know is, when and how it is best to attack it.

1st. When? In answer to this, I say the best time is in the fall or early winter. The leaves, as a rule, have then fallen.

2d. How? A little care taken to carefully rake up all the dead leaves and burn them will go far toward protection in the spring. If any spotted or dead leaves or fruit capsules remain on the bush, pick them off and burn them also. The bushes may then be left until pruning time. If any dead stalks remain, burn them, and as soon as the leaves begin to come out sulphur them, or, what is better still, dust them over with Ongerth's insecticide, for this latter will keep away the aphides as well as the worms that are apt to feed on the young leaves. This dusting should always be done while the dew is on the plants.

But there are a few other equally important things to be considered. The plant must be well fed. Don't under any circumstances try to feed a fine rose with rotten or decaying straw, for by so doing you are quite likely bringing to the plant the very disease you are trying to get rid of. Use only the best and oldest manure if you use any on the soil. Liquid manure is better. To this you may add charcoal, iron or ammonia, according as the character of your soil may need. Bones, fish, dead hens, cats or dogs make good food for roses. I presume the careful gardener knows when and how to push his plants. The great point is to keep them strong. If a rose is worth buying and planting in your place, it ought to be worth care.

If your roses are now mildewed, lighten up the ground. Give them a weak solution of ammonia and water at the roots, and treat the leaves either to sulphur or Ongerth's insecticide. If you wish to deepen or classify the colors you may find help in the use of iron and charcoal water. The latter are good for many plants whose flowers you wish to make richer. Look well, I say as a parting caution, to all dead leaves, and get them out of the way in the fall. Well rotted and mixed with lime or super-phosphates they are safe to put around young plants, but not otherwise.

THE more popular brands of Columbia-river salmon are beginning to come upon the market at New York for next season's delivery. Several sales have been made on car lots at \$1.65 free on board, which is about equal to \$1.82½ laid down.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Grange Finances.

It will no doubt be a gratification to many earnest Patrons to know the financial standing of the State Grange.

At the close of the State Grange session at Santa Rosa, the small amount in the treasury about equally balanced the amount due the National Grange for quarterly dues and several small accounts due. The meeting of the State Grange had naturally called out pretty full receipts for dues to the State Grange for the quarter ending September 30th, so that but a limited amount could naturally be expected from subordinate Grange dues till the end of another quarter, viz., December 31st. This left a term of nearly three months' running expenses of the State Grange with very little income to be expected. To place the treasury of the State Grange in good condition to meet these expenses, so that bills might be promptly met, and the reputation of the State Grange be kept good, Bros. I. C. Steele and A. D. Logan generously placed in the Grangers' Bank, subject to orders on the treasury, \$100 each.

Although there were extra expenses during the intervening three months, consisting of the printing of the Annual Proceedings, envelopes, blank-books, blank forms, letter-heads, etc., the State Grange well managed to pay its rent, salaries and all its expenses, and meet promptly all demands up to the 31st of December. Dues coming in for the quarter ending Dec. 31st have been sufficient to meet all obligations up to the end of the quarter on the 31st of March, except the money advanced by Bros. Steele and Logan.

The per capita tax payable on the 31st of March being increased, funds have accumulated in the treasury up to date to the amount of \$260, a sum large enough to meet the money advanced by Bros. Steele and Logan and to pay every cent of indebtedness which the State Grange owes. Yet not more than two-thirds of all the Granges have paid their dues for the quarter ending March 31st.

The National Grange dues have just been paid for quarter ending March 31st.

The cash (\$260) is now in the treasury with the hope and expectation that the amount of increased revenue derived from the increased per capita tax can be appropriated for the use of special organizers, Deputies and Lecturers in the field, whether any considerable donations are secured, as proposed at the Deputy meeting, or not.

Only one Grange has unequivocally "bucked" against paying the increased dues, and that we believe was done through a decided misapprehension of facts. Thirty out of 32 that have remitted dues to March 31st have already paid in full. We are sure the others will not stand out in any less just and magnanimous position when they know and fully consider all the facts, circumstances and noble action of their fellow-Patrons.

We judge, as far as our knowledge goes, that the finances of the State Grange have not been for a long time in better if so good condition as they stand now. Prospectively they are No. 1. All that is needed is that all Patrons "stand firm by their guns," "hold the fort" a little longer, and we feel confident and sure that our Grange interests and prospects will steadily brighten. From reasonable encouragement given in regard to the organization of new Granges by Bro. Still in Nevada county, Bro. Frisbie in Sutter, Yuba and Butte counties, and other brothers, it would seem an assured fact that we are just entering upon a season of renewed and permanent prosperity.

Faith and harmony prevail, and there seems no reason why the Grange should not steadily improve in this State from this on.

Changing the Name of a Grange.

The members of Newcastle Grange propose changing its name to Penryn Grange, and wishing to obtain all the information possible in regard to the mode of procedure in such cases, the W. M., Bro. S. Austin Wood, wrote to the Secretary of the State Grange for his opinion. The Secretary finds on pages 56 and 57, Section 17, of the Digest, edition of 1887, the following law: "Any Subordinate Grange desiring a change of name shall proceed: first, by the selection of a name, which shall be proposed at a regular meeting and be approved by a two-thirds vote at two subsequent meetings; second, after such proposition and approval,

the name so chosen shall be reported to the Worthy Master of the State Grange, together with the transcript of records relating to action thereon, and when the name so chosen is approved, the Worthy Master of the State Grange shall report the same, together with the former name and number of the said Subordinate Grange, to the Worthy Secretary of the National Grange, who shall then enter the name chosen as the name of the Subordinate Grange; and such report shall also be made to the Worthy Secretary of the State Grange, and like action shall be taken by him; whereupon said change of name shall be effected, and the Subordinate Grange shall thenceforth be known by its new name."

A Governor Who Means Honest Business.

Gov. Waterman's earnest talk to a *Record-Union* writer recently is worth repeating for its sincerity. It will take time to prove the wisdom or fallacy of his ideas of reforming our depraved State Prison youths, however:

"I am striving to give this State a good business administration. I am neglecting my private affairs to serve the people, and I am bending every energy to round things up in good shape. A Governor who attends to the affairs of State properly has his hands full every day in the year and every hour in the day. The State Prisons of this State have occupied much of my time. I found a jute plant at San Quentin that was being operated in the interest of this State. It stood between the grain-producers of our valleys and the 'grain-bag rings.' Being a practical business man, I saw no reason why those mills should not be operated day and night. If it was a good thing, why would not twice as much of it be better? My idea has been carried into effect, and we are now running two shifts, and if we had more prisoners we would run three. In order to increase the force it was necessary to transfer 150 prisoners from Folsom to San Quentin, and they are now earning their bread by the sweat of their brows making burlaps. Why all this cry against transferring prisoners from Folsom to San Quentin? They were earning nothing at the Branch Prison, the product of their quarry was not in demand, and it was simply a matter of business to take them to the point where they could at least earn a portion of their keep."

"Now I will be plain about this matter, and you can report me as so saying if you choose. California is a young and ambitious State, and I want to see her lead and not follow. There is no reason in the world why she cannot lead every State in the Union in the reformation of her youthful criminals. I am in favor of San Quentin for the State Prison. We have a good one there, and let us work the hardened criminals in the jute-mills, and make the cost of their maintenance a mere nominal sum, and, if possible, make the prisons self-sustaining institutions. In other words, let's manage those institutions, not as homes of ease for pensioners, but upon strictly business principles."

"Now, what I am going to advocate is this: Let us make of the Folsom Prison a reformatory, and place therein the prisoners under 20 years of age. I would be in favor of discarding the striped suits, and the rigid prison discipline as much as possible. Increase the size of the farm to 1000 acres, set it out in orchards and vineyards. Grow olives and citrus fruits. Beautify Mount Stoneman. Educate the youths thoroughly, and they will be forced to realize the errors they have made, and will go forth into the world at the expiration of their sentences better men for their imprisonment, men who can enter society, the business walks of life, and who will forever turn their backs upon criminals and criminal methods. Do this, and you will constantly have Folsom Prison full. It will separate the trivial offender from the red-handed murderer; the youthful transgressor from the boory-headed sinner. Captain Aull would be just the man for the position of Warden of such a reformatory. Now those are my reasons for wanting to take the workers from Folsom to San Quentin. I want to knock the 'grain-bag rings' in the head with prison labor, and thereby benefit the granger. I want to separate the youths from the hardened criminals, educate them to be somebody, so that when turned out upon the world again they can shift for themselves without having to resort to crime."

MERCED GRANGE.—Sister E. S. Elliott writes: We initiated two sisters at our last meeting and have two more for our next. We celebrate our 15th anniversary on the 5th of May, and would like to have some of our State officers present to encourage us in the work. Some of our old members have come back during the last quarter.

Literary Day at Sacramento Grange.

EDITORS PRESS:—Grangers, old and young, big and little, thick and thin, assembled at Grangers' hall in Sacramento, April 14th, for the purpose of enjoying the treat that awaited them. The exertions of the committee were happily materialized. The literary meetings of this Grange, which occur at intervals of about two months, are events which every loyal Granger looks forward to with a keen anticipation of pleasure and profit. They break into the rigid routine work, and better fit the hard-working Granger to do his allotted work for the cause. And then it is such a splendid place for the handsome sisters to show off their new spring bonnets and ecru-colored, Swiss-muslin polonaises and such things.

The meeting of yesterday had an attendance of 84 (babies not counted), and when it is remembered this is one of the busiest times in the year, it cannot be truthfully said there is any urgent need of having a goodly sized monument on hand to erect over such lively remains.

This Grange usually has a grand collation literary days, prepared by the nimble fingers of the sisters of the Order, but it was abandoned on this occasion because the brothers, in their infinite goodness, promised not to feel a certain faintness—and then chickens are so dreadfully hard to catch when the trees are in leaf.

The Worthy State Master Overhiser was present during the last half of the festivities, and gave an entertaining account of his visit to the National Grange. He pointed out convincingly how the Grange can be improved, and he said he would cooperate with heart and soul in such improvement. His remarks were eloquent, trenchant and instructive. Come again, Bro. Overhiser, and remain with us longer.

Hon. Thomas McConnell, Past Master of Elk Grove Grange, spoke in an interesting manner concerning the alleged hard times of to-day, with the situation 50 years ago. His remarks were excellent, sound and well chosen, and at the finish were greeted with genuine applause.

Bro. W. Walter Greer was the Master of Ceremonies, and he performed his duties with that dignity, neatness and dispatch so characteristic of the modest young Granger mentioned, who constantly is bent on hiding his light beneath the bushel.

After many kisses were exchanged on the part of several of the sisters (they seem on this score to indorse free trade) and old-fashioned hand-shaking on the part of all the brothers, the assemblage dispersed to meet again at the reunion at Enterprise Grange next Friday. Faithfully and fraternally,
CHARLES McEDWIN.
Sacramento, April 15.

Grange Items.

Worthy Master Overhiser writes from Stockton, April 15th, as follows: Returned to-day from Sacramento, where I attended Grange yesterday. It being literary day, the hall was well filled, and the exercises passed off very pleasantly. Met several members of other Granges, and learned that the members of Enterprise Grange were making arrangements for their annual reunion, which takes place Friday, the 20th inst., at 10 A. M. Tuesday, the 17th, San Joaquin Pomona Grange meets with Woodbridge Grange.

Another Tribute to his Memory.

The Grangers' Business Association has added yet another to the many tributes of respect and affection called forth by the sudden departure of Judge Joel Russell:

WHEREAS, God in His kind providence has called home our esteemed brother and former Director of the Association, Joel E. Russell; therefore, be it
Resolved, by the Directors of the Grangers' Business Association, that by the death of Bro. Russell we have lost a man true to his every instinct of justice and right, unwavering in his allegiance to the Patrons of Husbandry, and to the cause of temperance, in which he was a shining light, a genial and true gentleman and an esteemed friend, and we hereby tender to his bereaved family our heartfelt sympathy in this, their great affliction.—F. W. STEELE, I. C. STEELE, I. C. MERRYFIELD, Committee.

POSTAL TELEGRAPHY.—The Knights of Labor have been circulating petitions in every Congressional district and have secured nearly a million signatures from members of that Order and others in favor of a postal telegraph, says a late dispatch to the *Chronicle*. They have also asked their members to address private letters to Congressmen urging the desirability of Government management of telegraph and the strong popular demand for it. The formal petitions have just been sent to Washington and they constitute, it is believed, the largest array of names ever signed to a single request presented to Congress. The num-

ber of signatures to the petitions presented by the Pacific Coast men is as follows: Congressman Thompson, 1491; Biggs, 168; McKenna, 1952; Morrow, 125; Felton, 863; Vandever, 825; Gifford of Dakota, 1407; Voorhees of Washington Territory, 6706; Herman of Oregon, 2619.

Picnic Suggestions.

All admit the desirability of having our Grange picnics held in various parts of the State on different dates, so that the State Grange officers and other visitors can attend them in a circuit, after the fashion of holding courts and religious meetings in the Western States in early times. But with the matter of fixing dates for such a desirable arrangement comes the difficulty of accomplishing such a desideratum to the satisfaction of all interested.

In the absence of any report from other quarters, the *Patron* ventures to submit, as suggestive merely, a list of dates, to be knocked down, set up and rearranged to suit the wants and circumstances of all concerned. How would these dates do? Danville, Saturday, May 12th; Watsonville and Santa Cruz, Wednesday, May 16th; San Jose, Thursday, May 17th; Santa Rosa and Bennett Valley, Saturday, May 19th; Tulare, Saturday, May 19th; Modesto and Merced, Tuesday, May 21st; Stockton, Lodi and vicinity, Wednesday, May 22d; Sacramento and vicinity, Thursday, May 23d; Yuba, Butte and Sutter counties, Saturday, May 25th; Roseville and vicinity, Tuesday, May 28th; Nevada county, Wednesday, May 29th.

The main point, however, is to talk the matter up and hold the picnics on the best dates for all, and have a good time anyway. There is nothing that "does itself" so well, when once started, as a Grange and farmers' picnic.

Do not consider these hints as otherwise than suggestions. We hope El Dorado county and many other Granges will announce their determination to have pleasant and unceremonious outdoor gatherings, and send notice for our columns. Invite your friends and favorite speakers, and have a patent brake in readiness to apply to any long-winded speech that may happen to break loose and endanger the joy and success of your happy greetings.

YUBA CITY GRANGE has been discussing the hall proposition for some time, says the *Sutter Farmer*. Their plans are somewhat more extensive, as they contemplate a building to cost about \$13,000, containing a lodge-room and a large public hall. The Grange will meet April 21st, at 10 o'clock A. M., to confer the third and fourth degrees, and transact such other business as may come up. A harvest feast will be tendered to the new members and it is hoped that there will be a large attendance.

A TRUST is defined by the N. Y. *Herald* as a combination of manufacturing capitalists to check production, feed the market with only a limited supply of their goods and thus keep prices high. Their aim is to manufacture less and charge more. But if they make less goods, that means that they will employ fewer workmen, or give those they keep on less steady work. Hence a trust is a blow at the workmen.

ALHAMBRA GRANGE will confer the fourth degree to-day, and have the usual harvest feast. An invitation to all Patrons to be present has been extended.

Welcoming a Rival Road.

On Monday evening of this week the citizens of Hanford and vicinity held a meeting in Pythian hall to hear the report of the committee lately sent to interview the directors of the San Joaquin Valley Railroad Company.

The report being such as greatly to encourage the hope that a line of road will soon be constructed which will relieve the Lucerne valley from "the unreasonable exactions and mendacious policy of a grinding and unscrupulous monopoly—the Southern Pacific Railroad Co., who in the past have controlled and imperatively dictated to the people in the matter of transportation and other railroad facilities," the following resolutions were adopted with enthusiastic plaudits:

Resolved, That we, the people of the Lucerne valley, in mass meeting as embodied, do accord the contemplated San Francisco and San Joaquin Valley Railroad Company, whose survey intersects this country, our most cordial and hearty support, and we hereby pledge to them when their road is built our patronage in fares and freight; and be it further

Resolved, That we stand ready to extend to them and their prospective road both our hearty goodwill and financial assistance, which we feel assured will bring us relief from servitude.

A committee of three was also appointed to canvass the neighborhood, and secure pledges to the amount of \$100,000 as a bonus to aid in carrying out the enterprise to fulfillment.

ENTOMOLOGICAL.

How to Destroy the California Grape-vine Hopper.

[Appendix 2 to the Annual Report of the Chief Executive Viticultural Officer for 1888.]

The description of this insect and its habits is taken from "Harria" Insects Injurious to Vegetation," page 227, which reads as follows:

"The vine-hoppers, as they may be called, inhabit the foreign and the native grapevines on the under surface of the leaves of which they may be found during the greater part of the summer, for they pass through all their changes on the vines. They make their first appearance on the leaves in June (as early as April in California, J. H. W.), when they are very small and not provided with wings, being then in the larva state. During most of the time they remain perfectly quiet, with their beaks thrust into the leaves, from which they derive their nourishment by suction. If disturbed, however, they leap from one leaf to another with great agility. As they increase in size they have occasion frequently to change their skins, and great numbers of their empty cast-skins, of a white color, will be found throughout the summer, adhering to the under sides of the leaves and upon the ground beneath the vines.

"When arrived at maturity, which generally occurs during the month of August (earlier in California, J. H. W.), they are still more agile than before, making use of their delicate wings as well as their legs in their motion from place to place, and when the leaves are agitated, they leap and fly from them in swarms, but soon alight and begin again their destructive operations. The infested leaves at length become yellow, sickly and prematurely dry, and give to the vine at midsummer the aspect it naturally assumes on the approach of winter. But this is not the only injury arising from the exhausting punctures of the vine-hoppers. In consequence of the interruption of the important functions of the leaves, the plant itself languishes, the stem does not increase in size, very little new wood is formed, or, in the language of the gardeners, the canes do not ripen well, the fruit is stunted and mildewy, and, if the evil is allowed to go on unchecked, in a few years the vines become exhausted, barren and worthless. In the autumn, the vine-hoppers desert the vines, and retire for shelter during the coming winter beneath fallen leaves, and among the decayed tufts and roots of grass, where they remain till the following spring, when they emerge from their winter quarters, and in due time deposit their eggs upon the leaves of the vines, and then perish."

The Remedy.

Little difficulty has been experienced of late in destroying insects which prey directly upon the foliage of the plant. A resort to poison where it may be had has usually proved satisfactory. The subject of this treatise, however, is much more difficult to eradicate in that it derives its nourishment by sucking the sap from the cells of the plant, to poison which latter would mean the destruction of the same. Most prominent among the remedies proposed in the past few years have been: Spraying with toxic solutions, whale-oil soap being foremost. Sulphuring in the early part of the season has been advocated as a partial remedy. Carrying a lighted torch through the vineyard has also been suggested. An important aid to their destruction has been brought about by turning sheep into the vineyard in the fall, whereby the eggs and insects are eaten on the foliage or tramped under feet. This, however, has proven inconvenient in many cases, and cannot be recommended as a general remedy.

During the past week extensive experiments have been conducted by myself at the "Olivina" vineyard, near Livermore, where, with the assistance of Mr. Smith, the proprietor, I have been able to devise a means which I believe promises complete success.

First, however, to test the value of previous experiences, we resorted to spraying, sulphuring and fire. The following solutions were employed:

1st. One pound of whale-oil soap mixed with one pint of syrup and then diluted with one gallon of water.

2d. One-half gallon of syrup with one gallon of water.

3d. Two pounds of whale-oil soap to one gallon of water.

4th. Four pounds of whale-oil soap with one gallon of water.

Each and all of these were carefully applied to the infested vines by means of the Cyclone nozzle.

The strongest solutions of soap were such as to burn the tender leaves of the vine. The strongest solutions of syrup likewise proved detrimental to the foliage, but with all alike the hoppers continued their work undisturbed. Twenty minutes after the applications were made, and they have been made thoroughly, the hoppers were found on any and all of the vines treated and in as great abundance as before. In many cases they had been forced to the ground by the spraying, where it was thought the wings would become clogged and their further recovery thereby prevented. A short time afterward, however, careful search revealed none on the ground and remedies of this character were abandoned.

Sulphur has been dusted on the vine to such an extent as to render the foliage yellow, but shortly afterward the hoppers were found uninjured and continued so.

A torch carried at night was a failure.

Early-Morning Trap.

A contrivance for holding petroleum in pans was then arranged so that it could be placed

under the vine. This employed morning and evening proved an effective trap; for on shaking the vine the hoppers would drop into the liquid and so become destroyed. Still the apparatus for this purpose was so elaborate and expensive as to form a potent objection to its use for operations on a large scale. For this I therefore substituted a screen made out of green wire gauze, such as is ordinarily employed for window screens. The gauze should be stretched over a frame made of stiff wire, forming a screen circular in shape and about 2½ feet in diameter. A slot in one side will enable the screen to be placed immediately under the vine, the whole being attached to a stick in such a manner as to form a handle. We now have an effective trap for morning and evening work, for, by placing the screen under the vine, the hoppers will fall readily on to it; when there, they expire immediately if disturbed. Previously the screen has been coated or smeared over with crude petroleum, or even common kerosene will do.

How to Make a Trap for Midday Work.

For day work, which is the time when most of the operations must be conducted where large areas are to be treated, a different contrivance must be formed. For particular instructions, the following will direct any one:

For short prune varieties, first: The operator should be provided with 20 feet of one-fourth-inch iron rod, or an equal length of heavier wire approximating to this in size. Cut two pieces seven feet long each and two pieces three feet long each. With these, two semi-spheres may be made with a diameter of about two feet (these measures may be increased proportionately to make a larger trap). A strip of green wire gauze six feet long and three feet wide will answer to cover the trap. The gauze should be the material commonly used in window screens, and worth about 2½ to three cents per square foot. Do not try substituting cloth for the gauze, for our experiments proved it inapplicable. Bend the seven-foot length in a circle three feet in diameter, turning the ends together and twisting them outward to serve as a handle. Cross the circle with a second piece three feet long, which should also bend in a circle outward; this forms a semi-sphere. Now cover the whole with gauze, which may be sewed on like the parts to the cover of a baseball, attached by means of a string.

Make a second semi-sphere similar in every respect to the first, and such that the two, when brought together, form a complete sphere. The circle of the first semi-sphere may be provided with a notch to accommodate the body or trunk of the vine, thereby enabling the operator to completely cover the plant and provide against the escape of the hoppers.

Care should be taken in forming the notch to see that it is so placed in relation to the handle as to enable the operator to stand partly over the vine when bringing the trap together.

To Operate.

Smear the gauze over with crude petroleum or even ordinary kerosene oil, which may be applied by means of a brush or cloth as often as seems necessary. One semi-sphere is then taken in each hand, and each vine quickly and cautiously approached; the parts of the trap are brought together over each plant, and the stump of the vine kicked with the foot; in efforts to escape the hopper jumps from the vine and meeting the gauze comes in contact with the petroleum, the least touch of which means immediate death.

In our work, after making the parts according to the above description, and operating on a few vines, the green gauze was changed to a yellowish hue by the myriads of insects captured.

The apparatus being light and easily handled, a large area may be gone over in a single day.

With one appliance a man can go over three or four acres per day, and the total cost of treatment, including oil used, should not exceed 50 cents per acre.

To use the trap with best success, it should be employed at the present season. With the increase of foliage and enlargement of the vine, the trap must also be enlarged, becoming more cumbersome and more difficult to wield, though equally effective.

A great advantage in early work accrues from the destruction of the insects previous to the time of laying their eggs, thereby lessening the chance of damage.

For Long Pruned Varieties.

Where higher staked or longer pruned varieties are infested, the appliances must be adjusted to the shape of the vine. The semi-cylinders may be constructed with the same iron wire and gauze as that used for semi-spheres, with a bottom shaped to accommodate the stump of the vine.

It may be open on top, as experience proves they do not fly out above.

Vines lying on the ground, like those pruned on the Chaintre system, would require a semi-cylindrical screen, which may be so formed as to cover the foliage. Extermination in this case would prove more difficult, as we have no means of catching those which drop on the ground. But by operating in the heat of the day, the insect will be found to fly upward and be completely entrapped by the oil which has been placed on the gauze.

Before closing this treatise, I desire to express particular acknowledgment to Mr. J. P. Smith of the Olivina vineyard, and to his foreman, for their kind assistance and interest in the experiments which have been conducted

at his place, not only in the interests of his vineyard and those in that section, but also in the interest of many other interior sections from which I have received letters asking for information regarding the best means of destroying these pests.

The hoppers have increased on the Olivina vineyard during the past three years to such an extent as to become alarming. Many leaves already put forth are withered by their attacks, and some other sections report a similar condition of affairs.

It is now my belief that prompt and energetic attention to the above detailed method will remove all fear of damage to the grape.

In the past two years the Commission has experimented with and provided ample remedies for all insects consuming directly the foliage of the plant. The arsenic and bran remedy enables us to meet the grasshopper plague successfully, and Paris green or London purple mixed at the rate of 1 pound to 160 gallons of water will destroy other foliage-consuming insects, and has been proved innocuous to the fruit, vine, or raisin.

Up to this time the vine-hopper has proved a constant menace to the grower, but from this it is to be hoped dates our victory in the field.

J. H. WHEELER,

Chief Executive Viticultural Officer.

The "Twig-Borer."

EDITORS PRESS:—A little insect which I am told is called the "Trig" (or is it not "Twig?") borer is giving me some trouble this year. It is a chocolate-colored bug about three-eighths to one-half an inch long and about one-eighth inch wide. I have found it on both prunes and peaches, but have not noticed it on apricots so far. It bores into the branches at the root of a fruit spur, or young shoot, making a hole deep enough to contain itself, and I presume laying eggs there. I am going over the orchards and dig them out with my knife whenever I see one, and also drop a little whale oil into the hole; but I could not do this if the trees were large. If any of your correspondents can recommend a wash which will keep them off without damaging foliage or young fruit, I shall feel much obliged.—GEO. RODGERS, Guberville.

The name is certainly "twig-borer," not "trig-borer." The insect is probably *Polycuon confertus*, which does much harm in olive trees, but does not disdain other fruit trees. Its injury is greatest when the tree is young, and the loss of shoots may injure its shape. The insect, so far as now known, merely goes to the fruit trees for a lunch, but breeds in old oak stumps, etc., near by. Such stumps and half-dead trees should be grubbed out. We have thought that an early spraying with whale oil soap, which would taint the twigs for some time, would make them distasteful to the insect. What have others to suggest by way of prevention?

A VALUABLE PRESENT.—William H. Robinson, secretary of the County Board of Horticultural Commissioners and Quarantine Guardian of San Joaquin county, has presented to the High school of this city his cabinet of entomological curiosities. He has been ten years in collecting this cabinet, which is quite extensive and valuable. A great deal of time and attention have been spent in mounting, classifying and arranging the specimens, many of which are not common in this vicinity. They are in boxes with glass tops, and in vials, and preserved by alcohol, and consist of moths, millers, butterflies and bugs of various kinds; insects injurious to foliage and fruit, and insects which are beneficial to productive industries. Mr. Robinson says there is a general and growing interest in entomology, and some of the High-school scholars have made good beginnings, both in study and in collecting specimens of their own, which they arrange into orders, sub orders, genera, species and families.—Stockton Mail.

California Poultry Association.

The California Poultry Association held its annual meeting in this city on the 11th instant, Pres. J. J. Jones in the chair. There was a good attendance from the city and the bay counties. Mr. Cutting and other Sacramentans were also present.

Officers were elected as follows: Pres., Jasper J. Jones (re-elected); Vice-Pres., G. R. Presson, Thos. Waite, Wm. Niles, T. D. Morris; Cor. Sec., H. G. Keesling; Sec. and Treas., G. T. Marsh; Executive Committee, Jno. McFarling, D. H. Everett, A. H. Carlton, L. H. Cutting, S. McBurney, O. J. Albee, R. G. Head, C. H. Crowell.

McBurney, Bayley and Jewell were appointed a committee to prepare articles of incorporation, and report at the next meeting, to be held June 6th.

CATTLE SALE.—We wish to call the attention of our readers to the auction sale of thoroughbred and grade Holsteins and Jerseys announced by Killip & Co. in this issue of the paper. This firm is becoming an important factor in the live-stock business of California, and we are pleased to see they are meeting with a share of the success which their business enterprise so richly merits.

FLOODS in the Northwest are doing great damage. St. Paul, La Crosse and Oconto, and other cities and towns are partly flooded.

News in Brief.

CARP are plenty and easy to catch at Rosa.

MYERS' CANNERY at Seattle was burned last week; loss, \$15,000.

A FIRE at H. W. Rice's machine shop in this city did some little damage.

A FRUIT cannery and drier is likely to be erected at Santa Cruz the coming season.

THE people of Siskiyou are talking of illuminating Mount Shasta on the Fourth of July.

ELECTRICITY is being used for motive-power at several places in San Francisco and Oakland.

ALL arrangements for the building of Spreckels' sugar refinery at Philadelphia are now complete.

THE records of the patent office show that women have obtained patents on 1900 inventions.

MATTHEW ARNOLD, the eminent author who recently visited this country, died suddenly this week.

ROSCOE CONKLING, the eminent lawyer and politician, died in New York on Wednesday morning.

THE Native Sons of the Golden West will shortly erect a monument to General Winn, the founder of the Order.

A BILL has been introduced in Congress to make the arsenal at Benicia an arsenal of manufacture, construction and repair.

THE power to run the dynamo that furnishes Honolulu with electric light is run by water-power supplied by the city's water-works.

EIGHTEEN Italian marble-cutters who reached New York were placed under arrest for violating the importation of contract labor law.

A JET of natural gas is burning night and day on the Buttes, near Sutter City. Natural gas has also been found at Kelseyville, Lake county.

A COUPLE of Japanese are in Napa county for the purpose of buying horses, cattle and other live-stock to improve the breed of stock in Japan.

THE SENATE COMMITTEE on Public Buildings and Grounds has passed favorably upon the bill for a public building at San Diego, Cal., appropriating \$200,000.

THE telephone has been used with success between Bloomington, Ill., and Kansas City, Mo. Other connections were also made for a distance of 400 to 500 miles with success.

THE New York Assembly has passed the bill providing for the execution of the death penalty by means of electricity. This prohibits newspapers from publishing details of the execution.

LOS ANGELES is soon to have another cable street railroad, 10½ miles in length. It is to be double, making 21 miles of track, which will cost, when completed, over \$1,500,000.

THE Standard Oil Company will build a pipeline from Lima, Ohio, to Chicago, for the cheap and rapid transportation of crude oil, which they think is destined to take the place of coal in the great manufacturing establishments in Chicago.

Osage Orange Hedge.

The osage orange has been grown in this State to a certain extent from the very earliest days of American occupation, but has never reached any very great prominence. The tree grows well in this State, and its wood has been turned to account in Stockton and elsewhere, perhaps for buggy hubs and for other purposes. We get an inquiry once in awhile about the value of an osage hedge. The following, written by a Porterville farmer to the Visalia Delta, of a hedge which he saw in Los Angeles, will be of interest:

I visited Mr. George Hynes' ranch, near Los Angeles, where I was shown a specimen of the fence. My prejudice was entirely overcome, and I will here state that while I regard it the most substantial fence I have seen anywhere, it is decidedly the fence best calculated to suit the farmers of this county, inasmuch as it is proof against the depredations of both the smallest as well as the largest animals. The fence so exhibited to me was explained as not being a fair test of its usefulness and beauty, since it was constructed out of an old hedge that was very irregular, and too large to give a perfect idea of what the fence would be if it were built at the proper age of the plant. The side branches were trimmed or cut off close to the body of the plants, after which four smooth wires were stretched along beside them, when the earth was thrown away from the roots of the hedge, then the plants bent over to an angle of 45°, and stapled or "plashed" to the wires while in this position, after which the tops of the plants may be cut off at any desired height and the roots covered again with earth. The plants, reclining in this position, send forth shoots or sprouts from the ground all along on their upper side to the extreme top of the plants, which grow in a perpendicular shape, forming a lattice-work between the wires and the bending plants, and soon becoming proof against the smallest animals, while it is a perfect fence against all large ones as soon as plashed to the wires.

LEFFEL'S FARM MACHINERY.—We have received a very interesting catalogue from the Springfield Machine Co. of Springfield, Ohio, containing full descriptions and illustrations of the Leffel wind engine, pumps, tanks, etc., also feed-mills, etc., hay forks, hay-carriers, etc., sheave wheels, etc. All these devices are in wide use and worth consideration.

My Pansies.

O, here is one in a purple hat
And a robe of violet silk!
This little fellow is all in yellow,
And that one white as milk;
Dancing high and dancing low,
Just as the breezes come and go,
Dear little spring-time beauties, O!

One is dressed in a velvety black,
And one has a crimson gown;
This little maid is in blue arrayed,
And that in golden-brown;
Dancing high and dancing low,
Just as the breezes come and go,
Dear little spring-time beauties, O!

One has a critical, earnest look,
And one is wofully sad—
My pansies wise with their dusky eyes
And faces grave or glad!
Dancing high and dancing low,
Just as the heavenly breezes blow,
Dear little thoughtful beauties, O!

Sadie's Progressive Conversations.

(Written for the *RURAL PRESS* by MAUDE S. PEASLER.)

"What on earth did you invite her for, Sadie?" asked Belle Roland, as leaning over her cousin's shoulder, her eyes rested on the name of Mabel Grey in a list lying with a pile of neatly written invitations.

"Well," Sadie answered slowly, "I guess was because mamma wanted me to, though I'm sorry not to have thought of it myself. You see, she goes out very little, and has very few pleasures," she added half apologetically, for she stood somewhat in awe of this tall, fair cousin of hers, who had been "out" in society two years already. She herself was just beginning to realize that she was a young lady, and the party for which those dainty, scented invitations had been made ready, was her first attempt at evening entertainment.

"Ah! well," said Belle, "there is fortunately no danger of her coming. Not that I have any reason to dislike her, dear, only—well, she is not our sort, you know," she finished rather lamely. So at least thought the lady who entered the room just in time to hear the remark and Sadie's answer: "I think she will come, for mamma will take the invitation over to her," she said, "and beg her to make an exception in our favor. She has refused all invitations since she came here six months ago, to live in the house on the hill. Her aunt left it to her by will, on condition she should live there and retain the old servants, who had been so long in the family. I beg your pardon, mamma," she exclaimed, "I did not see you. Take this chair," and she playfully pushed her mother into the easy-chair from which she had risen as she saw her in the room.

"Thank you, dear child," said Mrs. Roland. "I was tired from my morning work, but am all ready now for a rest and a little chat with you two. Please bring me the footstool, and hand me my knitting. I see you have finished writing the invitations," she added, smiling approval at her daughter. Then turning to her niece, she asked:

"May I depend on you Friday to attend to the management of the flowers in the parlors? Sadie and I will be busy with other matters."

"Certainly, auntie. I see your party is sure to be a success, for your plans are all laid so as to avoid hitching—as papa would say. He has always praised you to me as the most perfect hostess he ever knew. He says any social event is sure of success if you have the management of it."

"He is very kind," returned the lady, smiling. "I certainly make an effort to have everything I undertake pass off smoothly, and it is pleasant to know that one's work is appreciated."

"I only wish mamma's mantle might fall on me," said Sadie, "but I'm afraid I'll never be as much of a success as she is."

"You need only practice, and to remember that your guests are invited that you may give them pleasure, to make you at ease when entertaining friends," said Mrs. Roland.

"That's just it, auntie," said Belle. "You never seem worried nor act as if you feared some mistake or accident. When I have company, I'm sure something will go wrong—the lemonade will run short if nothing worse happens."

Sadie and her mother laughed, and the latter said:

"Well, dear child, time and careful forethought will help you in these matters. Sadie, I'm going to take Mabel's invitation to her this afternoon, and if you will have some flowers ready, I will take them to her from you. I think she will promise me to come. As I came in the room, Belle, I heard you and Sadie talking of her. She is a very refined, accomplished girl in appearance, and, as far as I can judge, is allowing herself to brood over some trouble. It can hardly be the death of her aunt,

for they scarcely knew each other. She is old enough to manage her own affairs, but is, I believe, alone in the world. I think if she can once be aroused from her apathy, she will be a pleasant friend to know."

"You look more closely than I do, Aunt Ellen," said Belle, "for I failed to see any possibilities in her. I supposed you had asked her merely to 'fill up.'"

Mrs. Roland flushed warmly, saying: "No, Belle, I would never ask a stranger in a strange land to fill so unenviable a position. If she comes, I expect her to be treated as an honored guest."

"I beg your pardon, auntie," said Belle, penitently. "I'm afraid I was rude."

The entrance of the younger children from school prevented any further discussion among the three. Belle was soon assured that her aunt was not displeased with her by the warm pressure of the lady's hand as she sat near her at dinner.

As the two girls were waiting the first arrivals on Friday evening, Sadie complained of feeling a little nervous and fearful lest the evening should not prove a success. "It seems a little rash," she said, "to begin learning to be a hostess by bringing out something new, but mamma said I was all the more sure of interesting my guests. We have grown very tired of progressive euchre this winter, and no one has spoken of this yet."

When the first comers entered the room, Sadie introduced Belle to John Rivers, the only one she had not met, and was soon busy receiving and welcoming her arriving guests. John Rivers stood chatting with Belle as the merry crowd greeted each other, for all except Mabel Grey were old friends. "Yes, Miss Roland," he said, "I met them all last Monday at the Methodist social. The town seems very lively—much more so than when I used to spend my vacations here with Uncle Baxter. My friends have grown older, too, as well as myself. We were boys and girls together."

Sadie came up to them at this moment to ask Mr. Rivers if there were any he did not know. He assured her he had met them all. "All of them have arrived," said Sadie, "but Miss Grey, you do not know her."

"Yes, I have met her," he answered, little thinking which Miss Grey she meant. Sadie had forgotten there were two in town of the same name, and dismissed the matter from her mind. She was soon seen with a curious Japanese tray in each hand, offering of the contents to each she met. As she came near, John Rivers noticed that those in one tray seemed for the ladies, and those in the other for the sterner sex. He lifted by the lavender ribbon tied in the upper left-hand corner one of the square white cards, and after admiring the delicate spray painted on it, asked if they had a mission beyond being a charming souvenir.

"Oh, yes!" said Sadie, pausing to explain. "You will notice that the quotation written on it is incomplete. Some one of the ladies present has the other half written on a card tied with ribbon the color of yours. She will be your partner. Please find her as soon as possible so I can fill the tables."

Soon afterward he came to her and laughingly assured her that she must have intended slighting him, as no one had the rest of his quotation. "It is a familiar one for me, too," he said; "it was a favorite of a dear friend of mine."

"The stars come nightly to the sky,
The tidal wave into the sea;"

He read from his card in a subdued tone, as if it was fraught with dear memories. "The rest of it," he continued, "is:

"Nor time, nor space, nor deep, nor high,
Can keep my own away from me."

"Ah! Miss Sadie, good old John Burroughs was more hopeful than I, who lost my friend long ago, and to-night, through his little verse, have lost my partner."

"But," she said, half vexed, "we must find her, else my table is incomplete."

After a little laughing futile search, she said: "Why, I don't believe you have seen Miss Grey's card. She is half hidden by the curtain here." And Sadie led the wholly-puzzled man to a lady whose back was turned toward them and whom he had not noticed before.

"They told me Mary Gray was not here to-night," he said; at which Sadie turned in some astonishment.

"This is not Mary Gray," she exclaimed. "Perhaps you have not met this Miss Grey, after all. Let me present you to her. Miss Grey," she said, as she reached the seclusion of the bow-window in which Mabel had begged to be left till she grew used to the half-strange faces around her, "Miss Grey, permit me to present my old friend, Mr. Rivers."

Mabel rose with a very white face, to have both hands clasped in John's strong ones.

"I've found you at last, sweetheart," he exclaimed; and Sadie, with the quick intuition inherited from her mother, left them to talk it all over without listeners.

Going to her father and mother, she begged them to take the vacant places left at the table. The tap of a little silver bell now drew the attention of all present, and Sadie, with a bright flush of excitement on her young cheeks, invited the ladies and gentlemen to take seats at the small tables placed down the center of the room. Two couples were at each one.

"The name progressive conversations almost explains itself," she said, "especially as you are familiar with progressive euchre. In this,

however, only the ladies change their seats; the gentlemen remain where they are. The first topic of conversation this evening will be 'leap year,' and the ladies will try to give the gentlemen as much information as possible, the latter merely playing the part of listeners."

"At the end of five minutes, at tap of bell, the ladies will change seats as in progressive euchre, and a new topic be announced. At the close of the conversations, the gentlemen will vote for the most entertaining lady-talker, and the ladies for the gentleman who proved the best listener."

After a few moments of laughter and assurances on the part of the gentlemen that they would not find it hard work, as they had long been forced to accept the office of listener, the bell was tapped, and the conversations had begun. The gentleman in some cases looked as if they were used to it. Others seemed to think they ought to have a "turn at it."

After several topics had been given and discussed, the ladies had changed their seats so as to talk with each gentleman, and the voting began. Mrs. Roland attended to this, so that Sadie might steal away to the two guests who had kept up a steady stream of conversation ever since she left them.

During one of the short recesses allowed the gentlemen, in which they might rest, "by talking as much as they pleased," (so Sadie put it), one of them whispered to his fair neighbor, "John has outstripped us all, as usual. He seems to have found a willing listener, instead of being obliged to be one himself."

Sadie found Mabel looking so bright and happy that she could hardly help exclaiming over it. John Rivers rose, and still holding Mabel's hand, said: "Sadie, you have helped me to find my promised wife. Through a misunderstanding, we were parted, and I have been unable to find any trace of her who had filled so dear a place in my heart. I should have left here on Sunday, and but for the quiet insistence of your mother and self in coaxing her back to social life, would in all probability have missed her again. When they spoke of the shy Miss Grey, I thought they meant Mary Gray, and had no reason for looking in this quiet place for my lost Mabel. I hope you will be friends," he continued. But the two girls had their arms around each other before he had finished, and Sadie took them both into the sitting-room. She sent her mother to them as soon as the first prize, a satin hand-painted fan, had been given to Helen Conroy, a vivacious little brunette, to whom all had agreed in awarding the palm.

Kenneth Stone had an embroidered handkerchief-case given him, with the inscription: "He that hath ears to hear, let him hear," in one corner. This was traced on the light-blue satin with dark ink.

While they waited for refreshments, Sadie told them quietly what had happened, and when John and Mabel came back, all understood the situation. They made them at ease by taking it all for granted, and not appearing to notice that they had taken no part in the game. After some music and a cheery good-night, the guests went home, voting Sadie's party a complete success in more ways than one. They grew to know Mabel Grey very well before John took her to the lovely city home he prepared for her; and all felt glad that Mrs. Roland and Sadie had looked deeper than the rest, and secured them so congenial a friend as the "shy Miss Grey."

That Boy!

Mrs. Shamm gave a small but very elegant tea the other evening, and, as a reward for being good for two hours, she allowed her son Bertie, aged 10, to sit at table with the guests. As an example of cold-blooded villainy we give a few of the remarks made by Master Bertie during the progress of the meal:

"Ma," he asked first, "whose spoons are these?"

"Hush, dear," said Mrs. Shamm.

He hushed for a second, then:

"Ma, whose big glass dish is that?"

"Little boys should be seen and not heard," said Mrs. Shamm with a sickly smile, that did not conceal from the guests the fact that there was a fearful reckoning in store for Bertie on their departure.

"Say, ma," he put in, interrupting old Mrs. Moneyweight, who was the special guest of the occasion, "that ain't our silver cake-basket, is it?"

"Bertie, didn't you hear Mrs. Moneyweight speaking?" chides his distressed parent.

"Well, I'll be quiet if you'll tell me whose pretty glasses these are. They're Mrs. Baxter's, ain't they?"

"Bertie!"

"Oh, ma, I forgot to tell you that Mrs. Hooker wants you to be sure to send back her teaspoons to-night, and—Oh, ma, did you know that Sally broke one of Mrs. Walker's nice teaspoons? and—Oh, what a pretty plate this is! Who does it belong to?"

The doors had hardly closed on the last guest when the neighbors were apprised by a sound whose import could not be mistaken, that Bertie's time of reckoning had come.—*Detroit Free Press*.

"THE GREAT CRYPTOGRAM."—The Lowell Citizen remarks that if Shakespeare had only known about the Baconian cipher when he wrote his plays, there can be no doubt he could have made them fit a great deal better than they do.

How to Remember.

Toward the close of a talk on "memory culture" in San Jose, the *Herald* says Prof. G. W. James gave these hints on cultivating the faculty of recollection:

Observe, look and hear carefully. I dare say there are few, even in this audience, which ought to be eminently astronomical, for the great telescope stands almost over you, who could go out and tell the time of night within a few minutes by the position of the polar stars; and yet there are those with half your knowledge who can do it unerringly, and simply because they have observed carefully, and for that very purpose.

Reflection. That is, when your mind has received a thing, turn it over and look at it again.

Link thought with thought. There are three ways of doing this. First, the incidental way; this was practiced by Thurlow Weed, the great New York politician. He recalled at the close of every day each act he performed, every sight he saw, every conversation he engaged in, and was thus enabled to remember his promises, a difficult thing for this class of men.

The second way is the accidental. Thus, we have this year the figures 1888 to indicate the year of our Lord, and only once in a century do three figures come together in that way. Thus I recollect 1666 as the year of the great plague, the great fire, and from the latter fact the further one is suggested that 1666 gave us the first insurance company, and as this company insures our homes, and in our homes we all drink tea, it recalls the other fact that in the year of the three sixes was tea first imported from China.

The third way may be called the methodical. This means that if you have a theory or plan in which to array your thoughts, it is easy to recall them. It would be hard to remember all the actions that resulted in the upheaval of our mountains, and the forming of our valleys, if we did not first learn the theory of the contraction of the earth in cooling, and the cracks and fissures thus formed, but bearing this in mind, all is easy to remember. Lastly, using all the means possible to fix the impression you have received; think of the effect and review and arrange the impressions which have come to you, and they will become fixed, and you can recall them at your will.

How to Live Happily.

Thomas Jefferson wrote the following excellent advice. There is a great deal of human nature and good sense in it:

"Harmony in the married state is the first thing to be arrived at. Nothing can preserve the affections uninterrupted but a firm resolution never to differ in will, and a determination in each other to consider the love of the other of more value than any object whatever on which the wish had been fixed. How light, in fact, is the sacrifice of any other wish when weighed against the affections of one with whom we are to pass our whole life. And no opposition in a single instance will hardly in itself produce alienation, yet every one has his pouch, into which all these little oppositions are put, and while that is filling the alienation is insensibly going on, and, when filled, it is complete. It would puzzle either to say why, because no one difference of opinion has been marked enough to produce a serious effect by itself. But he or she finds his or her affections wearied out by a constant stream of little checks and obstacles. Other sources of discontent, very common indeed, are the little cross purposes of husband and wife in common conversation; a disposition in either to criticize and question whatever the other says; a desire always to demonstrate and make him feel himself in the wrong, especially in sympathy. Nothing is so goading on the part of either. Much better, therefore, if our companion views a thing in a light different from what we do, to leave him in quiet possession of his view. What is the use of rectifying him if the thing be unimportant; and, if important, let it pass for the present, and wait for a softer moment and more conciliatory occasion of revising the subject together. It is wonderful how many persons are rendered unhappy by inattention to these rules of prudence."—*Et.*

TOBACCO BLINDNESS.—This infirmity, it is said, is becoming a common affliction. At present there are several persons under treatment for it at one London hospital. It first takes the form of color-blindness, the sufferers, who have smoked themselves into this condition, being quite unable to distinguish the color of a piece of red cloth held up before them. Sometimes the victim loses his eyesight altogether. Tobacco being a narcotic, naturally benumbs the nerves. When the nerves are thus benumbed people do not see as distinctly, and this defectiveness of vision tends to increase and become permanent.

PENCIL FOR WRITING ON GLASS, ETC.—The new pencils introduced by Faber for writing upon glass, porcelain and metals, in red, white, and blue, are made by melting together spermaceti, four parts; tallow, three parts, and wax, two parts, and coloring the mixture with white lead, red lead, or Prussian blue, as desired. These pencils are convenient in the laboratory, and save the trouble of labeling.

YOUNG FOLKS' COLUMN.

How a Brave Boy Succeeded.

(Written for the RURAL PRESS by O. B. SERVER.)

(Concluded from our last.)

The morning of Jerry's birthday dawned bright, clear, and balmy. The family were astir early, for there was much to be done before the arrival of the youthful guests. Pies to bake, cake and doughnuts to make, vegetables to prepare, berries to hull, oysters to cook—in fact, Mrs. Howard and Ellen determined to make this the grandest gastronomic achievement of their lives; and you may be assured that their culinary qualifications were of no mean order. Then there were the chickens to clean and stuff, for a potpie of that succulent fowl was to be one of the many dishes on the occasion.

But the turkey! He was truly a royal bird—fat, meaty and of such huge dimensions that it seemed scarcely possible to "get away" with him at one sitting, even though the family was more than doubled for the time being. As the morning wore on, the edibles were prepared and placed in the oven, and their appetizing odors soon permeated the house and extended to the street, causing the passers-by to eagerly sniff the fragrant aroma.

Soon the guests began to arrive. First came George Gordon and Harry Sinclair, Jerry's friends, closely followed by Emma Burton and Julia Chilson, Ellen's schoolmates. Shortly after Henry Danbar and Kitty Sherrill arrived, and Edwin Ashford then came, completing the little party.

A merry group they were, as, gathered in the little parlor, they showered congratulations on Jerry for his well-deserved promotion at the store and his bravery in the recent attempted robbery. He was profuse in his thanks, but stood blushing like a schoolgirl at the many honors heaped upon him.

Soon dinner was announced, and as the merry group took their places at the table—Jerry at the head, the post of honor—their appetites needed no whetting, for they were fully primed to do ample justice to the toothsome viands spread before them. Although Jerry was the acknowledged host, his father relieved him from the duty of carving, and soon had the turkey thoroughly dissected and distributed to each guest. Jokes and laughter abounded, and when the dessert was served many of the party were in the condition of the traditional schoolboy—"too full for utterance;" the turkey and "fixings" had monopolized so much of their stomachs that no room remained for more.

After dinner the young people re-entered the parlor and engaged in music and social games. They were so engrossed that time was unheeded, and before they were aware of it, the evening shadows began to fall.

Now were this a conventional "love story" I would narrate how the blushing Jerry received the plaudits of his fair guests with the customary embarrassment; how the girls vied with each other to secure his attention and preference during the evening, and to receive from him the lion's share of osculatory favors in "Copenhagen" and similar games in which the merry party indulged. But as the sketch is nothing of the kind, but a "plain, unvarnished tale" of the boy's fortunes and his determination to rise in the world, I shall, in nautical parlance, "stow" any allusion, for the present at least, to the fickle goddess of Love.

What a merry party they were, to be sure! One of the young men had brought his violin, on which he was a proficient performer, and this, with Ellen's piano, furnished opportunity to the young people to enjoy the "mazy dance" to their hearts' content. Quadrille, waltz and contra dance succeeded each other rapidly, and the time for departure came all too soon.

As the hands of the clock neared the hour of eleven, several of the guests congregated in little groups and indulged in mysterious whispers. Then a spokesman was apparently chosen, for after a hurried consultation, Harry Sinclair, advancing to Jerry, addressed him as follows:

"We have gathered here to-night in response to your kind invitation to celebrate your sixteenth birthday. We well remember, while at school, your kindness to us and your readiness to assist us in our studies; and it gives us great pleasure to know of your success and well-merited advancement in business. In conclusion, allow me, as the representative of your old schoolmates, to present you with this slight token of our esteem and well wishes."

The "slight token" proved an elegant gold watch and chain, the former appropriately inscribed with the recipient's name and those of the donors. To say that Jerry was surprised would but faintly express his feelings. He turned white, then red, and endeavored to give utterance to the words welling up from his heart, but the power of speech appeared to have deserted him, a confused jumble only was audible, and he took his seat in despair.

"Speech! speech!" resounded from all sides. Jerry sat as in a brown study, seemingly trying to collect his thoughts. When order had been restored, he arose and said:

"My dear friends, I have no words to express my deep gratitude for and appreciation of the elegant gift you have so generously tendered me. It is such a surprise, it came so suddenly, that I am at a loss to put my thoughts into

language. Believe me, I am truly grateful, and I shall always hold in loving remembrance the dear ones who have so kindly testified their friendship in return for the slight favors I may have rendered them in the old school days."

He resumed his seat amid the tumultuous applause of the company, his eyes moist with feeling. At this moment the door-bell pealed loudly, startling the whole group, as the hour was very near midnight.

Mr. Howard answered the summons and soon returned accompanied by a district messenger with a note addressed to Jerry. The boy accounted for his tardiness in delivering the message by saying that it was handed in to the office late in the afternoon, but had been mislaid, and that when the note was found he had started immediately to deliver it, but as ill luck would have it, he had missed the last car and was obliged to traverse the long distance on foot.

The note was from the cashier of the H— bank, and read as follows:

Master Jerry Howard: I would be pleased to have you call at the bank at noon to-morrow in relation to a matter concerning yourself.

HENRY WESLEY.

More mystery! What could it mean? thought our hero. This had indeed been a day of surprises to him, and the end was not yet. Many and various were the surmises indulged in by the little group, and none was more mystified than Jerry himself as to the purport of the message.

The party separated at midnight, with many wishes for their young host's prosperity, and shortly after the family retired.

At 12 o'clock sharp the next day Jerry presented himself at the bank, and upon inquiring for Mr. Wesley was shown into that gentleman's private office.

"Glad to see you so prompt, my boy," said the cashier, extending his hand. "Promptness is one of the cardinal principles of business, and a boy who is careful to keep an appointment strictly at the hour designated is pretty sure to observe other rules which qualify him for success in whatever vocation he engages."

Jerry stood, hat in hand, at a loss how to reply; but Mr. Wesley, motioning him to be seated, continued:

"It is not customary with us to employ boys of your age, even in a subordinate capacity; but in addition to my own knowledge as to your character and capabilities, I have made inquiries of those who have known and observed you for years, and one and all unite in commending you in the highest degree. There is no vacancy in the bank at present, but I sent for you to say that the first of the year Mr. Price, our assistant book-keeper, leaves for New York to fill a similar position in one of the banks of that city, and that then the berth will be yours if you choose to accept it."

If Jerry was surprised at the reception of the watch and chain on the previous evening, he was doubly so now—this offer coming from one who was a comparative stranger. He had seen Mr. Wesley on his business trips to the bank, but previous to the day of the assault had not dreamed that he occupied a share of that gentleman's attention.

"Mr. Wesley," said he, "I assure you I am deeply grateful for your kind offer to and confidence in me, a poor boy whom you scarcely know. I have long wished for such a position, and hardly dared hope for it, even in the store where I am employed; but Mr. Stillman has offered me Mr. Dinmore's place when he resigns, which he intends doing shortly, and it would hardly be just to him to leave on so short notice."

"But it will be a month," replied the cashier, "which is certainly sufficient; and, besides, your salary here will be one-third larger."

The temptation was great, but Jerry requested further time for consideration and consultation with his father, which was granted, and the interview terminated.

The little family sat up late that evening, discussing the subject. Mrs. Howard and Ellen favored the acceptance of the offer, averring that the proffered position was but the stepping-stone to one of higher trust and emolument; but the father's conscientious scruples outweighed all monetary considerations, and he insisted that, considering Mr. Stillman's confidence in and generosity to the boy, it would be base ingratitude for the latter to desert him almost at the moment of his promotion.

The argument ran high on both sides, and after a three-hours' discussion all agreed to let the matter rest until Jerry should be installed in his new position of book-keeper at the store.

How little they dreamed of the events to occur in those few days!

Time passed; the first of December came, and Jerry was duly promoted to the book-keeper's desk. He was assiduous in his duties, made special exertions to please his employer, and his books were a marvel of neatness and accuracy.

It was the season of short days and long nights. Darkness came on early, and before five o'clock the clerks and office employees were obliged to work by gaslight. They were more than ordinarily busy—the holidays were approaching and large and increased orders had to be filled.

One evening a customer entered the store and inquired for an article not in common use. It could not be found on the shelves, but a clerk, remembering that several packages were in store in the basement, descended the stairs with a candle to procure it. Among the con-

tents of the cellar were a few barrels of oil, the faucet of one of which had been inadvertently left open, and the floor in the vicinity was saturated with the inflammable substance. How it happened was never definitely ascertained, but a hoarse cry of "Fire!" from the clerk as he rushed up the stairs, his clothes in flames, followed by dense volumes of black smoke, warned the occupants of the building to flee for their lives.

The unfortunate clerk, a mass of fire, rushed madly to the street, the draft created by his rapid exit adding intensity to the flames. He was seized by a dozen hands and his garments torn from him, but not until portions of his face and body were fearfully burned. A hack was summoned, in which he was conveyed to the hospital, where, after lingering for two days in great agony, he died.

When the fire broke out, Jerry was at his desk in the front of the store. At first he did not realize its close proximity and his danger, and hurried to the rear to rescue all articles of value possible. But the rapid spread of the flames soon drove him back, and he perceived the futility of all attempts to save anything except his own life. Moreover, he was so hemmed in by the small army of employees, and carried along with them, that he was soon forced to the street, where he stood in a dazed manner watching the destruction of the building.

Suddenly he exclaimed, "The books! I must save them!" and rushed into the store before his intention could be divined. The engines had arrived and were playing on the building, but heedless of the streams of water, the smoke and the flames, he disappeared through the half-consumed door.

An exclamation of horror went up from the crowd. "The boy must be mad! He will never come out alive!" was echoed by scores; and every eye was strained, and voices hushed in eager expectancy, as they scanned the opening through which he had entered.

At last, after a few minutes, but which seemed hours to the multitude, Jerry reappeared, a mass of grime and dirt, his coat smoking and his hands blistered, but firmly grasping the books. As he staggered out of the door, a dozen hands were outstretched to relieve him of his burden and convey him out of danger; but a falling timber struck his head cruelly, and he fell senseless to the ground.

When Jerry recovered consciousness he was lying in his own bed at home, his limbs swathed in flannels, his head covered with plasters and his whole body feeling sore. His injuries at first had been deemed most serious, if not fatal; but owing to the skill of the family physician, and the unceasing care and nursing of his mother and sister, he steadily gained in strength and was now rapidly recovering.

Just before Christmas he was permitted to go out for a walk, supported by his sister. Henceforward his improvement was all that could be desired, and in two weeks' time he was ready to report to his employer.

Mr. Stillman, however, had lost heavily by the fire, his insurance being light, and had concluded to wind up his business and go East. This was at first a surprise and disappointment to Jerry, but recalling the offer made him by Mr. Wesley, he proceeded to the bank to ascertain if the vacancy still existed. He was cordially received and informed that the position was only awaiting his recovery to fill.

The following day Jerry began his labors at the bank, and at once became a favorite. An apt learner of the duties assigned him, conscientious and painstaking, he soon gained the confidence of the officials, and in less than a year became paying teller. I will not follow him in his repeated advancements, but will picture him as he stands to-day, the honored president of one of the most solid financial institutions in the city.

All these events happened many years ago. Jerry—now a middle-aged man—is the owner of a mansion on Nob Hill, a happy husband—his wife, by the way, Emma Burton, one of the birthday guests—and the proud father of three beautiful children. His parents are still living in the old place, and point with pride to their son, the stay and comfort of their declining years. Ellen is happily married and the mother of two promising boys.

Our young hero's example may well be followed by the youth of to-day. No truer adage exists than "Nothing succeeds like success," and the prime factors for its attainment are industry, faithfulness and honesty.

THEY BROUGHT THE WILDCAT. — One day last fall, while W. D. Clark of Pleasant Valley, near San Jacinto, was away from home, his two little girls, the eldest ten years of age, espied a large wildcat prowling around close to the barn. They with two small dogs gave chase, the eldest girl armed, not with a broom, but with a black-snake. The wildcat took position on a large boulder and waited for the avenging force. The little girls pulled the dogs' ears and cried "sic," and the battle began, the girls pelting the cat, dogs and surrounding boulders with such stones as they could pull up, and using the blacksnake promiscuously. They came dragging their victim home, very much fatigued, and hardly knowing what it was. They certainly didn't know what risk they had taken.

"Did it rain?" said a Western man, in the course of a thrilling recital of border life. "Say, it rained so hard that afternoon that the water stood three feet on a slant roof!"

DOMESTIC ECONOMY

TOMATO OMELET.—Season a can of tomatoes with salt and pepper, add an onion finely minced, and spread over a hot, plain omelet.

APPLE-BUTTER PIE.—Two eggs, two heaping tablespoonfuls sugar, one tablespoonful flour, teaspoonful apple-butter, half-teaspoonful all-spice and milk to fill the pie.

SAVE all the brown meat-paper: it is very useful for wiping out greasy kettles and pans; it absorbs the grease, saves the dishcloth, and can be burned when through with it.

BUTTER TAFFY.—Two cups sugar, one cup water, two tablespoonfuls of molasses, four tablespoonfuls of vinegar, 1½ tablespoonfuls of butter. Boil 20 or 30 minutes and pour in buttered tins.

WHITE FRUIT CAKE.—One pound of flour, one pound of sugar, one pound of butter, one pound almonds, after they are blanched, one coconut grated, three pounds citron cut fine, whites of 16 eggs.

FRIED OYSTERS.—Out of their own liquor into cracker meal cook well, dip in beaten egg and then in cracker meal again; fry four or five minutes. Oysters look twice as large as they really are when double-breaded.

TO COOK BEEF TRIPE.—Wash the tripe carefully and soak in salt and water, changing once or twice; then boil until well done; remove from the water, dip in melted butter and fry a good brown; season with salt and pepper.

HORSE-RADISH SAUCE.—Take stock which has been cooked with a little vinegar, salt, butter, sugar and fine breadcrumbs, and mix with it as much grated horse-radish as will be required; the sauce should be quite thick; eat with boiled beef.

POTATO CUSTARD.—Grate six large potatoes, add to them one quart of boiling milk; stir in three beaten eggs and one-quarter of a pound of sugar, boil seven minutes, taking care not to let it burn, then add one-half cup of butter. This will make three good-sized custards.

WASHINGTON PIE.—One cupful of sugar, one-half cupful butter, one-half cupful sweet milk, one-half cupful flour, one egg, one teaspoonful of cream tartar, one-half teaspoonful soda; flavor with extract of lemon. Put on dinner-plates; spread with apple-sauce between each layer.

GINGER NUTS.—Three pounds of flour, three-fourths of a pound of butter rubbed into one-half pound of sugar, one pint of treacle, two ounces of ginger, one-half a nutmeg, one-fourth of a teaspoon of cinnamon. Make the dough stiff and knead it hard for ten minutes; cut into cakes and bake.

CHOCOLATE ICING.—Take one-half cup sweet milk, let it warm, grate what chocolate desired in it, stir it well, set on stove, add one cup of sugar, let boil five or six minutes, stir occasionally to keep from burning, and stir while cooling; when cool, add a little extract vanilla, which improves the taste very much.

MUFFINS.—To four well-beaten eggs add one pint of new milk; rub three ounces of butter into as much flour as will be needed to make a batter; stir into the butter and flour the milk and eggs, and add one teaspoonful of salt and one tablespoonful of yeast. Let it stand in a warm place to rise and bake in muffin-rings or patty-pans.

A SIMPLE FRUIT PUDDING.—To make this pudding take a teacupful each of sugar, sweet milk and chopped raisins or currants, one egg, one large spoonful butter, two teacupfuls flour and 1½ teaspoonfuls baking powder. Mix quickly together, put in a greased pan and bake or steam as preferred. Use with a hot sauce, or butter and sugar rubbed together.

CHEAP CAKE.—Put one-half teacup of warm lard in a pan with 1½ cups of sugar, one-half cup of water, a little flour; stir well or until the sugar is dissolved; add one-half cup of water, two eggs, a little nutmeg or essence of lemon, baking-powder one teaspoonful, and flour enough to suit; stir well. This will make dropcakes if flour enough be added, and sheet-cake if left thin.

STUFFED HADDOCK.—To stuff haddock, mix one ounce of dripping with 1½ ounces of breadcrumbs; add to this one teaspoonful of chopped parsley, one onion, one teaspoonful of milk and a little salt and pepper. After stuffing the fish, sew it up neatly and put it into a baking pan. Brush it over with butter or melted drippings, and sprinkle with breadcrumbs. Bake in a moderate oven, basting occasionally.

HOP YEAST.—Boil four or five medium-sized potatoes with a small handful of hops tied in a muslin bag. When tender, pour the water (there should be at least one quart) slowly upon four even tablespoonfuls of flour, one of salt, ginger and sugar. Stir constantly to avoid lumps. Allow this to boil, then add potatoes previously well mashed, and when cooler or lukewarm add two yeast cakes previously soaked in tepid water.

POTATO TEA CAKES.—Take one pound of cold boiled potatoes, and mash them smooth with the rolling-pin. Add one pound of flour, half a pound of suet, very finely chopped, six ounces of currants, two ounces of moist sugar, and one teaspoonful of baking powder; a little grated lemon peel may be put in if liked. Roll out to the thickness of half an inch; bake in a moderate oven for an hour, or until nicely browned. Cut into squares and serve hot.

The Week.

We went to press last week just as the hot wave was beginning to elevate itself. Before the turn came, the heat made an excellent record, in fact, according to some authorities, the highest April achievement within memory even to 82°. In the interior the heat was also great, but, as a rule, acceptable in bringing forward early fruit and stimulating growth of grass and grain, which in many parts has been lacking in buoyancy this season, because of prevailing low temperature. Since the warming up, growth has been splendid where the soil has received moisture enough to foster it. Some fields are finely headed out and hay-cutting must be just at hand, but in others it will take much more heat and some more rain to secure satisfactory results.

The first orchard fruits, in the form of cherries, came from Placer county, as noted in our

"Agricultural Notes." The contest between early regions is just beginning, and it would puzzle a prophet to declare which will be the really and truly early fruit district. There must be also sharper lookout for early varieties. The contest will be interesting and the results profitable to the winners.

The Future of our City and our Commerce.

Our merchants and manufacturers are concerned about it, and with some very substantial reasons. We are not making the progress that our position and natural advantages would promise. Indeed, there are already some visible signs that we are to have competitors for the commercial supremacy of the Pacific Coast, and it behooves us to discover what impedes our prosperity, and give it the gravest consideration.

It is an alarming fact for us, that within a few months, a vessel arrived from China with 4000 tons of tea for New York, and did not land in San Francisco, but went North to a British port. How many more will do so? Is that to become the accepted line, or shall we assert our supremacy and bring all this through traffic to our wharves?

In considering this question, there are some underlying facts that must not be ignored, or we shall grievously stray from a wise solution. Most of the great cities of the world began in a condition of simple life and extreme poverty. Wages, rents, interest and habits were all on a very low scale. They have risen continually, but only as a general necessity demanded, evenly and smoothly all along the line; and are, even now, within a very little of a dead level. Thus in London or Liverpool, you hire a day laborer for 75 cents a day. But when this man goes to market with his money, he buys almost nothing that has not been produced by labor at the same price, or less. The farmer and gardener work for 50 and 60 cents. The skilled mechanic takes only \$1. Nineteen-tenths of all workers are within these rates. Interest is only three per cent. Rent is almost nominal. A handful of fruit is one cent. He shaves for two cents. Thus he gets value received, or nearly so, for his labor.

Here in San Francisco we began business in the midst of a gold fever, the other end up, as it were. Interest three per cent a month. Rent almost fabulous. Skilled labor \$10 a day, and all things away up in proportion. Fees, salaries, taxes and dues were all fixed on this basis. Nothing was natural. We wanted a school-teacher, and one came from Liverpool who had never earned \$500 a year, and was installed at \$2500 or \$3000. The London policeman came here from a salary of \$30 a month and was accepted at \$150. The sack of flour in those days cost \$20 for 100 pounds.

We have had to scale down instead of up. It is a difficult process, and resisted with might and main by all parties concerned. The result is that we are in a most anomalous and trying position. Those who have come down feel a nipping poverty, while all who remain away up find employment falling away, and little prospect for their boys and girls to do as well as they have done.

Some things have touched the bedrock of cheapness. Mere labor can be had for \$1 a day. Flour is \$2 the hundred-pound sack. Interest has come to six and seven per cent, and you get shaved for ten cents, if you so wish.

But this laborer for a dollar a day is far less happy than the one in England with his 75 cents. When he comes to buy, and to pay rent and taxes, here is the scale of prices:

	Per day.
Bricklayers at.....	\$6 00
Carpenters.....	4 00
Painters.....	4 00
Plasterers.....	5 00
School-teacher.....	8 00
Policeman.....	4 00
Barber, a shave.....	10

The taxes in our city amount to \$100 a year to every voter; in the State, to \$30 a year; in the nation, \$30 a year. Here are \$160 a year for taxes, and he must go into the market and buy the labor of others at the rates above stated.

These exactions explain why bread, made from California wheat, sells in London at four cents a pound and costs six in San Francisco. The taxes, the rent, and the high wages do it. The teacher or principal of a high-grade school, with his \$2000 a year, in 1856 could buy only

100 sacks of flour of 100 pounds each. He can now buy 1000. Our farmers and their laborers pay this much more for his services.

With these taxes, rents, interest and unequal wages and salaries, wharf-dues and charges, we are as a city set on a hill, a city of high prices, that buyers shun and sellers only visit.

And while we continue this course we must continually feel the consequences. Our customers will go elsewhere. Our shipping will go elsewhere. And eventually our children will go elsewhere, to find a home and bread. Our city cannot grow under these conditions.

There is not on earth a more favorable location for a great city. We have neither heat nor cold to impede any kind of manufacture. There is no place where a laboring man or woman can work 300 days in a year with less exposure to wear and tear. There is no place where the body can be made comfortable, in house, clothing and food, on such easy terms, so far as nature is concerned.

When we come to the cash cost the difficulty begins. But it is in our power to remove it. It is in our power to make San Francisco the cheapest, as well as the best, city in the world to live in. And the manufacturer and the merchant are first of all interested in this work. The necessary cost of living is one of the prime factors in all commercial prosperity.

What would we have, then? Simply this—a better scale of wages and salaries, taxes and fees, rents and prices. In Europe, England comes nearest to us, and as we have seen there, 60 cents a day is very poor pay, and a dollar is very good. In a great factory with a thousand operatives, all but three or four are within this range. Foremen and managers run up to double. With us the range is much wider. If the lowest were a dollar a day, the highest would be five times.

The storm is upon us. The Canadian Pacific railroad has brought it right to our doors. British and American cities on Puget Sound are being founded with as good harbors, with coal, timber, and all facilities equal to ours. They are setting up a scale of prices beside which ours are the golden days of '49; and they will take our business, and we shall sink unless we wake up, shake off this golden dream, and strip for the race before us.

It must come, sooner or later. It will come in peace and wisdom, if we so wish; in strikes, riot, and perhaps destruction, if it must.

Now, then, should it be done?

Thus: Let us call a convention, a friendly conference, of all our merchants, manufacturers, mechanics, laborers, politicians, professions, indeed of all whose fees, charges, rents, profits or wages affect our prosperity and our future. Let us ask what is best to be done that we may maintain our supremacy as the Queen City of the Pacific!

Let us see who should yield a little for the general good, and lay the foundation for a scale of prices to our customers that will entice them and be no oppression to any of us!

Remembering always that when we yield a little and others do the same, we are really repaid in the cheapness of what we buy, and in the fact that the growth of our city will find room for our children, who without that growth must inevitably wander away from us.

It is a question of life or death for San Francisco.

A Spanish Plow.

California fruit-growers will be interested in the letter from Mr. Lubin on the state of the agricultural art, in at least one horticultural district of Spain. The sketch given of the plow, which is even now in use, must be a sort of exponent of the condition of husbandry which could tolerate such a tool. The lettering on the engraving is thus interpreted: A is the wooden portion, generally a part of a tree of the proper shape; B is the moldboard or point combined, in this case plated with iron, but sometimes merely sharpened wood; C is an iron piece answering to the landside.

VICE-PRESIDENT OAKES of the Northern Pacific says the sale of 80,000 acres of timber land in Washington Territory, within 30 miles of Tacoma, has been consummated. The transaction involves the construction of a line from Tacoma, to be known as the Tacoma Southern, to cost \$2,000,000.

THE Santa Rosa & Carquinez railroad is rapidly nearing completion.

Having Eyes They See Not.

The great trouble with many people in this world is that they are not industrious with their eyes. They do not see with them many things that they should, and often make sad, costly mistakes from not seeing things aright, and even not seeing at all. Nature has given us fairly good eyes, and gave them to us for use, for pleasure, and for profit. Their use is cheap, they are able to do all the reasonable work we may use them for, and if we use them quite industriously they will last us as long as any other members of our body, and will last just as long when used constantly in useful work as when not used with any profit to ourselves or others. These thoughts are suggested by the very many mistakes we have seen made by divers persons by seeing things wrongly.

Recently the writer saw a large cherry tree robed in snowy whiteness with its abundant flowers. An intelligent young man near by spoke up, "Yes, it is nice, but it will not have any fruit this year; it is just covered with little red lice, and they are eating off all the flowers."

We stepped up to the tree but could see no lice. "Go round to the other side and you will see millions of them." We passed around to the other side and found nearly every flower nipped off as smoothly as if done with shears. It is true there were a few minute red mites on the twigs, but most certainly they had not nipped off the blossoms. Seeing some finches ("California linnets") in the ravine close by, we stepped out of sight, when quickly three or four were in the tree, snapped off a flower apiece and flashed back into the brush.

The young man had observed the tree in the middle of the day, the day before, when the twigs and flowers were swarming with the little red mites, and at once jumped to the conclusion that they were doing the damage. Suppose he had been the fruit-grower himself, and had taken the same view of it. He would have said, "These miserable little mites are ruining my cherry crop, but I will fix them," and at once gets his spraying apparatus and deluges the tree with some strong alkaline solution, and kills all the flowers left, the mites, and perhaps the tree, while the finches, the true cause of the mischief, are hopping around in the brush.

But with the skillful fruit-grower there should be no *perhaps* in any such cases, for he should at once determine, if possible, whether this particular mite was noxious or beneficial, for some of the mites are strictly vegetable feeders, others, animal. Among the former, some of them are very injurious, the "red spider," the green louse, common on some of our fruit trees, is an example. Others again seem to be neutral. But those of the genus that feed on animal matter are, many of them highly beneficial, others quite noxious to animal life.

Now, in this instance of the cherry tree, the cause of the destruction of the flowers should have been quickly determined by a man with eyes and a little brains behind them, and the remedy instantly applied, to wit, the shotgun, or some small pieces of bright tin suspended by threads from the branches. The shotgun should be used on this flower-eating finch at every house, for it is exceedingly destructive to fruit-tree flowers, and when it is reinforced by the notorious English sparrow, which has the same bad and flower-devouring propensity, our fruit-growers will have a lively time. This finch is a shy, retiring bird. This particular cherry tree stands near a brushy ravine. The side next it was stripped nearly entirely of flowers, the opposite side not touched. Therefore trees near a thick, brushy cover would be denuded of flowers by it, or, a great number of these birds might get into a thickly planted orchard if the environment suited them, and be entirely denuded, while another orchard of the same kind, not near cover, or more thinly planted, might escape entirely and bear full crops.

We have seen many other just as serious and uncalled-for mistakes. Then, let us use our eyes, and the large or small amount of brain power behind them, as may be the case, and make fewer mistakes.

THE Hawaiian sugar crop this year will amount to over 100,000 tons, of which about 60,000 tons come to the American and the balance to the San Francisco refinery.

Orange-Growing in Spain.

[From our Special Correspondent abroad.]

This morning, accompanied by Manuel, the guide, and having in my possession a written permit, we drove to the ranch of the Visconde del Pequall. This, I was told, is one of the most valuable pieces of farming land in the suburbs of Cordova.

The road to the right and left of us presented a fine appearance, being almost a continuous orange and olive grove.

Arriving at the gate of our destination, I handed the permit to a party stationed there, and in a short time the head steward, or superintendent, made his appearance and bade us welcome.

We were shown through the garden and the residence and then the fields. The first thing I inquired for was to see the implement department.

The superintendent looked at my interpreter in blank amazement. A department for implements? What could that mean?

I told him that in our State the extensive farms generally had a shed, house or store-room where the implements were kept, and some of them even had blacksmith's shops and blacksmiths on the place to repair or even devise implements. The superintendent (after this explanation) said: "Yes, I have heard that in America the people try to make all sorts of machines do the work in place of working with men, horses, oxen or mules. We have even tried some kind of a machine several years ago, when it was left here to be sold, but we Spaniards know how to work good enough without machines."

Having failed in finding the "implement department," I next asked to see a plow.

I was shown one (inclosed you will find a rough sketch of it which I drew on the spot). How do you like it? I saw its partner 3½ years ago at Jaffa, when Mr. Howard, the guide and hotel man there, told me: "Vehn Ebrahaam vuz beebie e yuze zot kin plode pipel off Kal-dee zere."

After seeing this plow I began to realize what a mistake I had made in asking for an "implement department." However, I made another attempt. "Have you no plows made of iron or steel in modern shape?"

"No; they have them for sale in Madrid in a machine store."

"What other implement have you," I asked, "for working the land?" All I could learn was that it was a "flat spread" with teeth in it (presumably a rude harrow). As there were none handy, I did not see it. The plows, as illustrated herewith above, cost 10 francs in plain wood points and 16 francs with iron-plated points. They are, however, usually "home-made."

They plow one acre a day, requiring one man and two animals; depth of plowing, about four inches; cost of laborer, 1½ to 2 pesettas (about 30 to 40 cents) per day (no board).

I inquired the price of land, and none could tell me other than "rent prices."

From what I could learn there is no selling prices, for it is very seldom that land is sold, excepting only in cases where a bankrupt nobleman is compelled to pay gambling debts. In such an event the land is sold, but not to the people. Oh, no! the people may look at land, they may rent land, they may work on land, but to own land—who ever heard of such a thing?

To be sure there are a few miserable peasants in the north of Spain, who, by dint of much labor, have removed boulders and rock sufficient to enable them to scratch in a quarter or half acre of seed on land they may call their own; but when it comes to the lands in Andalusia it is a different thing. "None but noblemen" is the rule here.

What is the result? What may we expect as a result from such a course? The result, as far as I can see, is this:

1st. On the one hand the nobility are a set of heartless, selfish bigots, ostentatious, frivolous and unscrupulous.

2d. The peasantry are profoundly ignorant, superstitious and slavish.

This combination has its effect on the people of the Spanish Kingdom. Toledo, which could support a population of 200,000 under the Moorish rule, now can scarce support 18,000. Cordova, that could count over 1,000,000 inhabitants under the tolerant Caliphs and Sultans, can scarce count 40,000 to-day.

The nobleman whiles away his time in Paris or in questionable intrigues at Madrid, and the laborer finds the "the good-old-way" plow equal and superior to the "Oliver chilled."

I learned from this superintendent that some

PLOW NOW USED IN THE ORANGE ORCHARDS AT CORDOVA.

kind of a mysterious disease has sprung up, fatally injuring the orange trees.

Some five years ago it was observed that some of the foliage would turn yellow, wither and die; soon thereafter other portions of the tree would share the same fate, and in time the tree itself died.

From year to year this state of affairs continued and kept on increasing in fatality, and in an almost geometrical proportion, until now (according to the information of the superin-

carefully destroyed after examinations and tests, as they may carry with them an infection.

In my next I hope to be able to give you my observations on Malaga Vine district.

D. LUBIN.

Cordova, Spain, March 12th.

[The specimens are received. It seems altogether likely that the trouble is underground, and possibly from unfavorable soil or moisture conditions.—EDS. PRESS.]

VITICULTURAL COMMISSION.—The terms of some of the Viticultural Commissioners having expired, the Governor has made appointments to fill the vacancies, and the board is now as follows: San Joaquin District, George West;

Sonoma, I. de Turk; Los Angeles, J. J. Rose; El Dorado, G. G. Blanchard. M. M. Estee succeeds Arpad Haraszthy as Commissioner at Large. Mr. Haraszthy was President of the Commission and one of its oldest members. He was appointed by Governor Perkins when the Commission came into being, and has been President ever since.

CALIFORNIA PRODUCTS IN CHICAGO.—An exhibition of California products is to be main-

The Mills Grape.

A new Eastern seedling grape which is praised at the East for hardness and p. iveness is shown in the engraving on this page. The new variety has perhaps exceptional interest in this State because the vinifera element enters into its parentage. It is described by Ellwanger & Barry of Rochester, New York (who are propagating and distributing the variety), as "the result of long and intelligent experiment by one of the most judicious experimenters in the country."

The Mills grape was raised by Mr. William H. Mills of Hamilton, Ont., by crossing Muscat Hamburg with Creveling. Bunch very large, compact, shouldered, some clusters weighing over 12 ounces. Berry large, round, jet black, covered with a thick bloom; flesh firm, meaty, juicy, breaking with a rich, sprightly flavor. Skin thick; berries adhere firmly to the peduncle. Vine vigorous and productive; foliage large and healthy. Ripens at the East about with the Concord, or a little later, and is a long keeper.

Ellwanger & Barry who have grown the grape in the open air for several years, give the following judgment upon it:

The Mills is a grape which for size, quality and appearance comes the nearest to the ideal variety of any we have seen. Its quality is the very best, exceeding in richness any hardy grape we are acquainted with. It possesses distinguishing characteristics which place it at once much in advance of the ordinary grape, and entitle it to be regarded as a remarkable production. We do not presume to say that it will succeed in all soils, situations and climates, but we believe that in a climate similar to that of Western New York, and with a reasonably good soil, situation and treatment, such as every grape should have, it cannot fail to give satisfaction. It is especially recommended to those who desire a grape of high quality, and are willing to bestow upon it the care it deserves.

The Mills seems to have qualities which may make it valuable here as a shipping grape. The

American Rural Home says of it: "The vine is vigorous, apparently quite healthful, heavily-loaded with immense, compact bunches of large, very solid blue-blackberries of an exceedingly rich, sprightly, aromatic flavor. We have nothing to modify in that description. As would naturally be expected from the texture of the grape, it is a good keeper, and was shown at the horticultural meeting last January in an excellent state of preservation."

We have no doubt some of our enterprising growers will try the Mills, and then we shall know of its local adaptations, which we hope

will add another to varieties valuable in California.

ACTION ON CONTRACT.—In Judge Gibson's court in Oakland, on the 12th inst., a jury awarded \$450 damages to A. Lusk & Co. of San Francisco, in their suit against W. C. Blackwood of Haywards, for the non-delivery of dried apricots which he had agreed to sell them. It appeared that Blackwood made a contract with Lusk & Co. in June, 1887, to deliver them 30 tons of choice sun-dried sulphur-bleached apricots at 11½ cents per pound, but afterward tendered apricots of an inferior quality, which they declined to receive, and as he refused to deliver according to contract, Lusk & Co. sued him, and after a stubborn contest won the case, as above stated.

GLACE HUMBBUGS.—New Yorkers have lately been surprised to find "crystallized figs" offered for sale in shop and stand for 20 cents a pound, whereas they have usually been charged 70 or 80 cents for such confections. When tasted, they prove not bad, yet not very delicate, and the Graphic explains that they are not "crystallized figs" at all, but only lumps of cheap fig jam, molded into the shape of a fig and sugar-coated.

LARGE quantities of wool are being shipped from San Diego and National City.

THE MILLS—A NEW EASTERN SEEDLING GRAPE.

tendent) fully one-third of the entire orange orchards of Spain are past recovery.

Not alone are old trees affected, but young trees suffer alike with the old.

The first sign of the attack is seen in the turning to a yellowish tinge of the center rib in the leaf. "When this is seen," said my informant, "the tree is as good as dead (although it may linger a season or two and even give several good crops in the meantime); the tree is doomed." I soon learned to distinguish the difference between the healthy and the affected trees, and found that the affected trees were most numerous on the place visited.

I asked if the trees were affected thus by any insect or animal, signs of which could be found on exposed or hidden portions of the tree. I was told that no sign or indication could be found as to the cause of the trouble.

I could find no insects on the trees. Believing that it would be of interest to our orange growers to learn more of this matter, I herewith inclose specimen of trunk and root-bark, and leaves from affected trees.

When grubbed, the roots are much decayed, and the superintendent attributed the trouble to some root disease.

Prof. Hilgard may be able to determine the nature of the trouble and perhaps a remedy. The root-bark and leaves should, however, be

tained at Chicago as an advertising medium. Cereals, preserved fruit and green fruit in season will be displayed. The project was worked up by the Southern Pacific railroad people. Nineteen counties have agreed to contribute \$300 a year each for its support, with others to hear from. The California Fruit Union will send shipments to this display depot. H. M. Van Arman will return to Chicago and arrange for the exhibition, and Dr. Latham will be in charge of it.

THE STATE AGRICULTURAL SOCIETY has lately bought four lots adjoining the east side of Agricultural Park for \$9900. They will be utilized for the sheep and swine exhibits of the State fairs, and thus give more space for horse stalls. The society had been badly crowded, and this is a most important purchase.

COLORS SERICULTORS.—A colony of negroes in Jefferson county, Ala., is said to be cultivating silkworms with great success. From 100 to 400 pounds of silk, worth \$5 a pound, can be raised on one acre. A company will be formed to manufacture the silk.

ACCORDING to the Inyo Independent \$100,000 is loaned on mortgage upon Owens Valley lands. Much of this bears interest at 15 per cent and none less than 12.

FRUIT MARKETING.

The Labor Problem.

EDITORS PRESS:—Last year Chinese, school-children, tramps, and all were unable to prevent hundreds of thousands of dollars worth of fruit from wasting. An increase of 25 per cent over last year's crop would not be an extravagant estimate, and where is the extra help coming from? Suppose we have enough to handle such a crop as last year, even then one-fourth our fruit must be wasted. But that is not all. Suppose 100 men were on this side the river each waiting to cross where they would get a dollar for that day's work. The only ferry-boat could take but 75. Now, if there were no other means of getting across, the ferry-man would be master of the situation, and could raise his charge to such a point that 25 would rather lose their time than pay the fare, or he could wait for competition to take its course, and let the passengers bid for the ride. In this case the situation is not quite so clear and the 200,000 laborers cannot speak with a single voice. Still the price will be substantially regulated by the six companies, and they are quite capable of taking in the situation. So it is very likely to be a question this year whether the profit of the fruit shall go to those who produce or those who harvest it.

In view of this it is not passing strange that we see little in the papers, and nothing in any of the topics for discussion among fruit-growers bearing on the question? They discuss everything else, but what odds does it make whether the black scale destroys the crop, the railroad takes it for freight, the commission-man dumps it into the bay, or John Chinaman takes it for the picking? It goes all the same. Prompt action now might remedy the danger.

Machinery.

Now is the time to discuss machines for picking, paring, etc., methods of handling to save work, the San Jose plan of picking prunes, Mr. Cooper's way of gathering olives, etc., and see if they have any suggestions for handling other fruits. Have driers, platforms and yards ready.

Piecework should be encouraged. By this means two men can often be induced to do the work of three by the day, they getting better pay and the employer cheaper service.

We can get more help if we begin now. Granted that Chinese legislation keeps that factor of the problem constant, we pay about twice the wages for common labor paid at the East, and living is practically the same. Yet they say this is no country for a poor man. In debating this question lately with a crowd of men charmed with the climate but disgusted with the chances for workmen, everything was in favor of California until it came to cost and prevalence of dissipation. That accounted for their want of success. There appeared no way by which the State or individuals could thrive while wasting half they earned. From the hoodlum element we have no hope. But fruit can be handled by women and children, and we want steady families from the East who will turn loose into our orchards. By organized effort and such inducements as can be given for homes and steady work, enough can yet be brought in to save the fruit crop. Manage work on fruit farms so as to keep the adults busy through the year and the children in vacation. Put up tenant houses, advertise, and we can get plenty of help and attract a class of citizens greatly needed.

San Francisco.

An Enterprising Man Wanted.

EDITORS PRESS:—In your last issue, among "Agricultural Notes," I find a report about our fruit prospects which every one who knows the county must indorse. Indeed, the prospects for a fine crop of every branch of agriculture were never better. A bountiful grain and hay crop seems to be assured, and our fields and orchards, as well as our vineyards, promise an unequalled supply of every cereal and fruit. And yet, with a largely increased crop of the finest apricots, cherries, nectarines, plums, peaches and pears, with extensive vegetable gardens, which can supply all the peas, corn, tomatoes and asparagus a cannery could want, right from the neighborhood and fresh—with canneries being established everywhere, with a scarcity of canned goods now in the markets, and therefore the assurance of a ready sale for all that could be put up, our cannery, started two years ago with the brightest hopes, stands idle, and our fruit-men sell their pears and peaches to the canneries of San Jose or Petaluma.

Our cannery, which is fully equipped, capable of turning out any amount of choice goods, and fitted to dry what is not strictly first class or may be too ripe, is offered either for sale or rent, at lower figures than a new one can be started, and there is no one here to take hold of it. In one of the best fruit-growing districts in the State, with plenty of fruit to keep it supplied, in a town of 6000 inhabitants which could supply all the labor in its boys, girls, and poor women, this institution lies idle. It is situated near the railroad depot and the steam-

boat landing, therefore has the best shipping facilities to be found anywhere. All it wants is an enterprising man who understands his business to take hold of it, make money for himself and give a market to our fruits, and employment of the most agreeable kind to hundreds of our inhabitants. That these are facts, not fiction, will be apparent to every one who investigates it. I have no "ax to grind," no fruit to sell, no children who want employment, but I would like to see this institution made useful and prosperous in our midst, instead of being an eye-sore to all who have the welfare of the community at heart. I hope that these few lines may draw the attention of business men to one of the best chances for making money I know of.

Napa, Cal.

GEORGE HUSMANN.

Unpleasant Experiences in the Dried-Fruit Business.

A recent decision in Judge Wilson's court has been regarded with considerable satisfaction by merchants interested in the dried-fruit trade. The action was brought by Wormser & Co. of this city, against a house doing business in Pueblo, Colorado, viz., C. Henkel & Co., to secure settlement for a carload of dried fruit purchased early in the year 1886. From the complaint it appears that Messrs. Wormser & Co. sold and shipped the fruit to Henkel & Co.; that before the fruit reached its destination, a sharp decline in overland freights occurred, which rendered the purchase an unprofitable one. When the car reached Pueblo, Henkel & Co. refused to receive it or pay for same, on the ground that the fruit was wormy and in bad condition. Wormser & Co. refused to make reclamation and ordered the property reshipped to San Francisco. When it reached here, an examination was made, and no defects appearing such as had been claimed, demand was made against Henkel & Co. for damages, in the sum of the expenses incurred. This demand was refused. Subsequently, while Mr. Henkel of the firm mentioned was in this city, suit was brought for the recovery of the amount claimed, and the judgment just rendered gave to Messrs. Wormser & Co. about \$1600, being expenses, cost and interest.

The peculiar interest attaching to this action is that it establishes the liability of purchasers who attempt to evade fulfillment of contract in transactions of this kind. Of late years the experience of merchants engaged in the dried-fruit business who have shipped fruit to Eastern markets on orders has been most unsatisfactory, and in many instances has proved unprofitable as well. The experience here is that on a declining market, claims for reclamation and rejection are so frequent, even among houses doing business in the large Eastern cities, which enjoy high commercial standing, that it is unsafe to ship dried fruit at all, except it is examined and paid for before shipment. So frequently have instances of this kind occurred with some houses, that several of the most prominent buyers have been put on the black list by the trade, and orders unaccompanied with remittance are wholly ignored.

Formerly considerable carelessness in grading fruit was observed. Of late years, however, this has been corrected, and there seems little occasion now for irregularity in this department of business, more than in other branches. It seems as though the dried-fruit business might be so regulated as to avoid the annoyances hitherto connected with it, and unless it can be, the merchants of this city will, for self-protection, be obliged to refuse all orders from the East, except for spot cash, where acceptance is made before shipment. The result of the action mentioned may have a wholesome influence.—*Grocer and Country Merchant.*

Raining Snakes, Frogs, Etc.

A subscriber in Kern county has lately read an account of its "raining snakes," somewhere in the northern part of the State, and asks:

"Did ever such a thing happen? It hardly seems plausible. It was also stated that at some other place they supposed from the quantity of small fish and fishworms on the ground, after a rain, that they had fallen with the rain. I should like to know if this is really so?"

We have seen such stories in print, from time to time, ever since we have known how to read, and the theory, we believe, is generally accepted that small fishes and reptiles are occasionally drawn up in a water-spout from one place and presently let fall in another.

RIVERSIDE PAVILION BURNED.—On the evening of the 12th, while the janitor was preparing to light up the Riverside pavilion for a dance, a lamp exploded and set fire to the building, which soon burned to the ground. The adjoining brick block, in which was Wells, Fargo & Co.'s express office, was also destroyed with all its contents except what was in the fire-proof vault. Nothing was saved from the apartments of J. H. Vandever over the express office. The blacksmith shop of S. Alder was somewhat injured. The Glenwood hotel was on fire several times, but was saved by hard work. The loss on the pavilion is \$5000, insurance \$3000. Wells, Fargo & Co.'s loss is estimated at \$10,000; insurance nearly covers the loss.

THE LUMBERMAN.

The Lumber Business of the Pacific Coast.

The lumber business of the Pacific Coast has already developed into magnificent proportions, and is still growing at an annually increasing rate which bids fair, at no distant day, to constitute the largest local interest of the kind on the entire continent. It seems to have taken a new start during the past few years.

The census of 1880 gave, in round numbers, 693,000,000 feet as the cut of that year on the Pacific Coast. Of this amount California contributed 305,000,000 feet, Oregon 177,000,000, Washington Territory 160,000,000; the balance, 51,000,000 feet, was contributed by Idaho, Nevada and Arizona—the last-named furnishing nearly 11,000,000 feet.

Since 1880 Washington Territory, in which is located the great lumber region of Puget sound, from being the third on the list has made a wonderful development and leads by far all other localities. We append a rough estimate as the figures for 1887:

	Feet.
Washington Territory.....	600,000,000
Oregon.....	300,000,000
California.....	400,000,000
All others.....	70,000,000
Total.....	1,370,000,000

These figures show a wonderful increase in the lumber business of this coast during the first seven years of the present decade, the yield having practically doubled in that time.

About one half of the total lumber product of the coast has long been consumed in California, and the present boom in Southern California has largely increased the consumption during the past year. It is estimated that about one-half the entire lumber used in the State during the last half of 1887 was consumed in the three southern counties. As there is every reason to believe that the great influx of newcomers into the State will continue in an increased ratio for several years to come, we may look for a corresponding increase in the lumber business. People that are coming here must have homes, and our lumber-mills will be taxed to their utmost to keep up the supply. To do this the capacity of existing mills must be largely increased and many new mills must be built. The increase of production during the last year has been about 200,000,000, or a little over 17 per cent. As the influx of people coming to stay is now spreading over the entire State and the numbers greatly increasing, we may reasonably look for a lumber famine for a year or two to come. Either this or our foreign trade must suffer. This last would be a misfortune, as our foreign and Eastern lumber trade promises to be one of the great trades of the future, and one which we ought to nourish with great care. The mills now in operation will be utterly unable to supply the demand, and in all probability it will be impossible to put in operation new mills sufficient to turn out a supply sufficient to meet the urgent necessities of our rapidly growing population. It is a fortunate fact, however, that

Our Forest Supplies

Are equal to the most urgent demand which can be made upon them. We have, first, immense lumber regions, which may be opened up all along the western slope of the Sierras and Rocky mountains by lateral railroads, which may be easily rushed up into their canyons from main lines at innumerable points. These mountains trend along the Pacific Slope from the northern to almost the extreme southern boundary lines of the Union—a distance of some 2000 miles, and are covered for nearly their whole extent by immense forests of the finest timber on the continent. Then we have the Coast Range with even a much larger supply. The average width of this latter range cannot be less than 25 miles by a length of about 2000. Passing on northward and beyond British Columbia, we have in Southern Alaska another forest stretch of absolutely unknown area, probably nearly or fully equaling the two areas already noticed. All this timber is readily approachable by ship or rail, and will all be eventually converted into serviceable values. It has been estimated that when all the available timber in the regions south of British Columbia is converted into merchantable lumber, its market value cannot be less than \$20,000,000,000 or \$25,000,000,000, when placed at tidewater. There is no doubt but that amount of money will be realized from it in the near future by those engaged in the industry. It is almost impossible for the mind to comprehend such immense values. The amount named is fully two-thirds of the assessed valuation of all the property in the United States at the present day. The San Francisco *Journal of Commerce*, in alluding to the magnitude of the forests of the Pacific Slope, says: The principal descriptions of lumber that go to make this up are the pine or red fir, the redwood, the cedar, and the sugar-pine. The pine or red fir is found west of the Cascade range, between 44 and 52 north latitude, 8° or 560 miles in length. All the country round the basin of Puget sound, except in the few clearings, is covered with its stately growth. The redwood is king from 37 to 42 north latitude, and takes in 4125 square miles. Great tracts are covered with trees 200 to 300 feet in height, and a redwood forest is one of the most majestic sights in the world. The cedar is found wedged in between the redwood and the

sea from 40° to 42°. The sugar-pine is the most valuable timber found in the Sierras, and is present in almost inexhaustible quantity. The yellow pine of Alaska is found in extensive forests stretching over a territory almost as large as the whole of the rest of the Pacific Coast west of Nevada.

SHEEP AND WOOL.

The Wool Interest of California.

There is no State in the Union more favorable for either wool-growing or wool manufacture than California. The wool grown in the northern portion of the State is of a very superior quality. It is sound in staple, and possesses great elasticity. It will readily take the most delicate colors and has no superior in its fulling qualities. Sheep may be and generally are sheared twice a year—each shearing giving a staple well fitted for clothing purposes.

The wool product of California has averaged nearly 40,000,000 pounds per annum since 1880, bringing to the State about \$6,000,000 each year. This is about one seventh of the entire wool product of the country. The estimated product of the United States for 1888 is 275,000,000 pounds, which is about two-thirds of our consumption. Nearly all our imported wool comes from Australia.

Woolen Manufactures.

There are now, we believe, ten woolen factories in operation in California, as follows: The Pioneer and the Golden Gate Mills in this city, and one each in Santa Rosa, Petaluma, San Jose, Stockton, Napa, Marysville, Merced Falls and Los Angeles. The Sacramento Mill was recently destroyed by fire, and there are two others in course of construction—one at Los Angeles and one in Woodland. The knitting-mill connected with the Pioneer Mill in this city might be considered a separate institution, which would make the whole number in the State ten. There have also been two other parties in the State looking for some favorable localities for establishing woolen-mills. They represent large Eastern manufacturers who are anxious to enlarge their business and prefer this coast to the East for such enlargement.

Notwithstanding the many failures in the business in past years, the woolen manufacturing industry of the State was never more prosperous than at the present time. The failures that have occurred within the past few years have been due to mismanagement. All the mills now running, with perhaps two or three exceptions, are doing well and making money for the stockholders. No industry can succeed where the business is run in the interest of the officers and managers, without any reference to the rights of the stockholders. Experience has shown that wherever mills have been run on strictly business principles they have done well.

There is not a State in the Union which presents more favorable opportunities for profitable woolen manufactures than California. Tons of wool are being constantly shipped East by railroad and returned to this city in the shape of manufactured goods, which might just as well be spun and woven by our own people. Manufacturers here have two freight tariffs, besides double commissions, in their favor. The best army cloth in the country has been, and now is being, manufactured in this city. The Pioneer Woolen-Mills of San Francisco have for several years held government contracts for navy flannels and cloths, and, of late, we believe these cloths are made altogether from California wools, although formerly the Mission Mills used a certain percentage of Australian wools for such goods. All the world is familiar with the superior blankets which were formerly turned out from the Mission Mills in this city—goods which took the premium against the world in the several international expositions held in London, Paris, Berlin and Philadelphia.

The Tariff Question

Just at this time presents a factor of much disturbance to both the wool-grower and the manufacturer. But in the present state of public feeling it is very doubtful whether any tariff bill can be got through Congress which will have the effect of crippling such a universal and generally profitable business as either growing or manufacturing wools. The wool production of the United States saves to the country from \$40,000,000 to \$50,000,000 annually, and a large portion of that money is earned by small farmers who raise a few sheep merely to give variety to their farm products and utilize land which would otherwise have very little value. The value of the manufactured product reaches to more than double that sum, and is distributed among a great army of workers whose interests no legislative body can afford to ignore. If any change in the tariff is needed in this direction it should be with a view to encourage both branches of this great industry. The few old fossils in Congress and elsewhere who are sitting on the tail end of progress and shouting for free trade, will soon learn their true status and take a more progressive stand, or be whisked off from their present position into political oblivion. The day is past when the working people of this country can be dropped from their present high position of prosperity and independence and relegated to the condition of poverty and suffering which characterizes the working people of Europe and Asia.

THE LOUISIANA TRACT!

City of Sacramento,

SITUATE ONE MILE FROM THE FLOURISHING

With a Population of 30,000, and

 $\frac{1}{4}$ MILE from Terminus of an ELECTRIC RAILWAY, now in course of construction.

SUBDIVIDED INTO 5-ACRE LOTS.

Soil is Deep and First-Class Fruit Land.

CITRUS AND ALL DECIDUOUS FRUITS, and the choicest of Plants reach the highest state of perfection upon this soil.

30 ACRES OF TRACT IS GOOD ALFALFA LAND, from which three crops a year can be cut. 5 ACRES IN FRUIT, well attended to, will make a handsome income. One Acre in Strawberries will net \$400 a year.

WATER IN ABUNDANCE at a depth of 30 feet. One Windmill, costing \$80, will irrigate five acres.

PRICE FROM \$175 TO \$250 PER ACRE.

TERMS.—One-fourth cash. Deferred payments in five annual installments; interest at 7 per cent, free from taxes. Title perfect.

Healthiest Location and Best Market in the State.

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES

At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. One hundred and seventy-five acres at Palermo are now being set out in the choicest varieties of Florida Orange Trees. Maps and further particulars of

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil. TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for home or quickly paying investments, cannot do better than purchase here. For further information refer to

PALM VALLEY

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land?

DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

Stockton, Cal.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

DRYING WITH TRIMMINGS.—Livermore *Herald*, April 12: J. H. Wheeler has decided to build a fruit-drier on his "Cornelia" estate on West avenue. As fuel he will use the trimmings from his orchard and vineyard. When they were gathered up, he had them made into small compact bundles, tied with bale rope, each about the size of a stick of wood. This was done very quickly, and at an expense of but about \$1.50 per cord, by means of a simple device of Mr. Wheeler's own invention.

Butte.

THIRD DISTRICT AGRICULTURAL ASSOCIATION. Chico *Enterprise*, April 2: The annual meeting of the Directors of the Third Agricultural Society was held Saturday. W. A. Shippee of Nelson, W. M. Billups of Colusa, C. H. Merrill of Willows, Dr. C. C. Mason, G. W. Dorn, T. P. Hendricks and Wm. Hawkins of Chico, were present. D. M. Reavis was absent. The election of officers resulted as follows: C. C. Mason, Pres.; Wm. Hawkins, V. P.; John E. Robinson, Treas.; Jo. D. Sproul, Sec. The date of holding the Annual Fair has been set for Tuesday, Aug. 21, to continue five days. The arrangement of the speed program was then considered, and the unanimous opinion of the board was expressed that it should be the most attractive ever offered in the district. The purses made up amount to over \$5000, and give assurance of a grand gathering of fine stock, and the premiums to \$2000 or \$3000 more.

Colusa.

A MODEL CHICKEN YARD.—Colusa *Sun*: Jos. McVey has a fine residence on his farm on the east side of the river, and has everything about the place kept in first-class order. The chicken yard is worthy of special mention. In the first place, to get into the yard one must go through seven gates, each one opening with a spring, and made so like the fence that one has to know just where it is located to open it. This is to keep out Chinamen and other chicken thieves. The nests are so arranged that each hen is separate from the rest when setting, and the broods of chickens are then graded like our schools. The newly-hatched go into one department, and those of another go into another department, and so on until the young chicken is prepared to take his chances with the rest. The roosting-place is not a mere dirty roost of the ordinary barn-yard, but the chickens go upstairs to bed, as it were. The whole yard is so arranged as to be easily kept clean, and is so kept. Over the top of the whole yard slats are arranged close enough together to keep a hawk from swooping down on the young chickens. An examination of this yard is well worth a trip to Mr. McVey's farm.

HAWKS HELPING FARMERS.—Dr. Jas. Compton in *Williams Farmer*: Two years ago we had 40 acres of wheat seed destroyed by birds. The land was sandy and winter-sown, and as much as nine-tenths of the seed was destroyed. This year we had the same land winter sown with wheat. As soon as it commenced coming up the birds came in tens of thousands and began their work of destruction. The remedy, which was completely successful in my hands, was strychnine; two drachms formed in a solution of water enough to moisten two gallons of wheat. In the morning I scattered about one-half of the wheat across each end of the field, about 100 yards from the ends. By this method the dead birds will lie at each end of the field. Soon after the birds' death the hawks and ravens appear on the field and eat them. Hunting for dead birds, they fly from one end of the field to the other, thereby herding the entire field. I have seen at one time as many as a dozen hawks flying back and forth across the field, the birds being in constant fear without doing any damage. Farmers, don't kill hawks—they are your friends.

Contra Costa.

GLANDERS.—Martinez *Gazette*, April 14: We are sorry to learn that a horse running in a field with a large number of others, near Danville, was discovered last Tuesday to be in a badly diseased condition, and an examination convinced those who saw him that he was afflicted with glanders. He was promptly shot, and a veterinary surgeon, telegraphed for at San Francisco, a few hours after, without hesitation pronounced it a bad case of glanders, and ordered the carcass to be burned. The field has been quarantined, and every precaution will be taken to prevent the spread of the disease. Some little time will necessarily elapse before it can be known whether the contagion has been communicated to other horses in the pasture.

Inyo.

CANAL COMPANY.—The Inyo Canal Co. filed articles of incorporation April 10th. The object of the company is to construct irrigating canals and ditches, and to appropriate, purchase, own and hold water and water-rights, and to furnish and sell water to other persons and corporations, for the purpose of irrigating and reclaiming lands, and for mechanical and manufacturing purposes, and to purchase and sell, own and hold, and to irrigate, reclaim and cultivate lands in Inyo county, Cal. The capital stock is to be \$750,000, divided into 15,000 shares of the par value of \$50 each. Trustees for the first six months, Simeon L. Lee, Simeon Bishop,

Finley McIver, Theodore R. Hofer and Trenmor Coffin. Principal place of business, Carson City, Nev.

Lake.

QUARANTINE GUARDIAN APPOINTED.—*Avalanche*, April 12: W. G. Klee, State Inspector of Fruit Pests, has appointed John Reimus Quarantine Guardian for Lake county. Mr. Klee has made a good selection, as Mr. Reimus is a man who takes a great deal of interest in fruit culture.

Los Angeles.

GRAPE OUTLOOK.—"Borea" in *Anaheim Gazette*, April 12: The grapes are later than usual in putting out, and the time for late frost is past, so the grape crop will likely be a good one. The Fullerton cannery will handle several tons of Muscats daily. Those having Malvoise grapes will dry and stem them and sell them as dried grapes rather than take \$10 a ton. Dried grapes well cared for readily command four cents a pound, which is \$20 a ton, and pay for the work.

POMOLOGICAL.—Los Angeles *Herald*, April 14: The third annual meeting of the Los Angeles County Pomological Society was held at Glendora on Thursday last. A very large delegation was present from all parts of the county. The hall in which the meeting was held was beautifully decorated with flowers and evergreens. The ladies of the neighborhood were out in full force and took a lively interest in the deliberations of the society. Among the Glendora exhibitors were W. B. Collins, bananas; Mr. Gatton, English walnuts, dried fruit and orange marmalade; J. L. Dougherty, Wm. D. Shields, P. Shory, J. J. West and John Bender, Mediterranean Sweets, seedling, St. Michael paper rind, Washington Navel and Australian Navel oranges. H. D. Englehardt's, Sicily lemons were exceptionally fine. C. E. Needham of Glendora contributed strawberries. John T. Gordon of Azusa made an excellent exhibit of lemons and oranges, as did also E. R. Coffman, John Richard, H. T. Thomas, Mrs. D. H. Davis, R. A. Meredith and others. J. Justice of Azusa showed superior walnuts, and H. W. Quitzan exhibited port wine, Zinfandel and brandy. Gladstone's contingent of Washington Navel and Mediterranean Sweet oranges are worthy of mention. Pres. Hiram Hamilton being unavoidably absent, J. W. Salles of Pomona presided. A number of papers of interest to horticulturists were read, and a lively discussion followed, participated in by Milton Thomas, T. A. Garey, M. Baldridge, George D. Whitcomb, W. B. Cullen, D. Elson Smith, J. W. Salles, W. R. Barbour and others. The following officers were elected to serve the ensuing year: Thomas Garey, Los Angeles, president; George D. Whitcomb, Glendora, Mr. Fuller, Gladstone, L. Parker, Anaheim, and A. D. Bishop, Orange, vice-presidents; D. Elson Smith, Santa Ana, secretary; Milton Thomas, Los Angeles, treasurer, and W. R. Barbour, Covina, Entomologist. It was decided that the next meeting be held at Alhambra.

Mono.

LIVE STOCK LICENSES.—Bodie *Miner*: After much exciting debate, many petitions, a great deal of buttonholing, and things, the Supervisors have changed Ordinance No. 22 so as to let the license stand on horned cattle, take it entirely off horses, and raising it to 7½ cents on sheep. We are informed that all cattle-men, both domestic and imported, express themselves as perfectly satisfied with this; and in fact many of them who "happened" to be in Bridgeport at the time applied for their license on cattle at once. Unless the object of the Supervisors was to place the license on sheep so high as to make the driving of outside sheep into this county for grazing purposes only, prohibitory, 7½ cents on that class of animals is too much. If sheep are kept out, however, it will render the grazing grounds of Mono so much more valuable proportionately. Some men who have not yet worn out their pencils, have finally run up the number of cattle driven in here every year to graze to as high as 28,000 head. Capt. J. L. O. Sherwin testified before the board, while the matter was under consideration, that last year he collected toll on 10,000 head of horned cattle driven in from Inyo county alone.

Nevada.

CHAMPION EGGS.—North San Juan *Times*, April 6: Monday last we received a box from James Quick of Badger Hill with the following explanatory note:

O. P. STIDGER.—Dear Sir: You will find in this box two Light Brahma eggs, which I present to you as Easter eggs. I think they will out-measure any eggs Mr. Shoemaker ever had in Grass Valley. You can measure them for yourself. Yours, etc., JAMES QUICK.

We did measure them, and here is the result: Egg No. 1—Longitude, 10 inches; latitude, 8 inches. Egg No. 2—Longitude, 9½ inches; latitude, 7½ inches. The eggs were beautifully colored and astonished all who saw them.

Placer.

FIRST CHERRIES.—Cor. *Chronicle*, April 12: The Newcastle fruit district maintains its claim of being the earliest place in California in ripening its fruits, by producing the first ripe cherries of the season, which were sent out from Newcastle April 11th. They were of the early Lamauria variety and were from the orchard of C. M. Silva & Son.

EARLY STRAWBERRIES.—Newcastle *News*, April 11: Robert Hector brought us a basket of fine, large, luscious strawberries on Monday last. They were as large as English walnuts, and as delicious as they were large. This is the

first basket of strawberries we have seen this season. Thanks, Mr. Hector... The first strawberries brought to this market this year in shipping quantities were from the ranches of W. E. Richey, J. K. Correa, and C. H. Kellogg. They were sold to Geo. D. Kellogg at a good price, and were shipped by him on Monday, April 9th, to the Eastern market.

Sacramento.

ANOTHER POLLED-ANGUS HERD.—*Record-Union*, April 14: Dr. G. M. Dixon of this city owns the Loupvalle stock ranch in Buffalo county, Nebraska, which ranch is well stocked with Polled-Angus cattle. He has recently received from there a draft of 50 head, all young and very choice animals, and they are now quartered on the Brockway ranch, one mile south of the city, on the Freeport road. Dr. Dixon's herd here consists of 34 males and 16 females, and they are doing so well in this climate, he has decided to bring his entire herd of Polled-Angus cattle to Sacramento this fall, and here maintain permanently a large herd. His observation and experience show that here an animal will maintain a steady and uniform growth throughout the year—a very difficult matter in the East, where the rigorous climate checks the growth of the young animal every six months.

San Benito.

HORSE MARKET.—*Free Lance*, April 13: The third monthly Horse-Market, under the auspices of the Hollister Board of Trade, was held last Saturday. By 10 o'clock more than 40 horses had been brought to Kent's livery stable, and having been duly numbered and tagged were led into the stalls. Although there were several buyers present from neighboring towns, no sales of importance were made until afternoon, when a brisk business commenced, bringing fair prices. Many other sales would have been made had not the sellers asked high prices. The next Market Day is Saturday, May 5th. In order that the sale may be a great success, and the presence of outside buyers secured, it is absolutely necessary that the sellers register their horses with Secretary Leggett as soon as possible. A large list of horses sent out the week before the sale will insure the presence of a great many buyers.

San Luis Obispo.

A STRAY COUGAR.—S. L. O. *Tribune*, April 13: Once upon a time wild animals were plenty in San Luis Obispo county. There were grizzlies and black bear, panthers, coyotes and wild cats, but within the last generation anything wilder than a stray hog is as rare as in New Jersey. Still, something of the kind is heard of occasionally. Last week one visited the camp of Mr. H. C. Petty, who was burning lime on the Santa Margarita, and killed a newborn colt, badly injuring its mother, a fine animal valued at \$600, and killing also another horse. Mr. Petty had the satisfaction of laying out the animal the next night with a dose of strychnine with which he doctored the remains of the colt. The lion came back to finish its feast, but after carrying the prepared supper about 50 yards, grew discouraged and concluded to die. It was a female with cubs, as was ascertained from the tracks, and measured six feet five inches in length.

Santa Barbara.

AGRICULTURAL SOCIETY ELECTION.—Santa Maria *Times*, April 11: The meeting of the Agricultural Society at Judge Thornburgh's office on Saturday last, to elect officers for the ensuing year, was well attended. The following are the elect: A. H. Orr, Pres.; Jas. Morse, V. P.; Jos. Kaiser, Treas.; M. Thornburgh, Sec.; W. H. Rice, R. Yelkin, Walter Elliott, Chas. Martin, J. E. Norris, C. W. Merritt, B. Pezzoni, Directors. The officers propose to enter upon active duty, making arrangements for a fair in Santa Maria this fall. The exact date of holding the fair has not yet been determined.

Santa Clara.

THE FLORAL FAIR.—San Jose *Mercury*, April 14: The ladies of the Conservatory of Music Association, who are to give the floral fair which begins May 1st and continues five days, are meeting with success in their endeavors. * * * Arrangements for the grand march of titled flowers, which is to be one of the chief attractions at the fair, are nearly complete, and it promises to be one of the most ingenious scenic displays which the wit of woman could originate and her persistence complete. Fifty of the rarest, richest and most exquisite flowers represented by ladies and gentlemen costumed in tasteful and artistic fabrics! This gorgeous array of titled exotics will be preceded by a host of fairy creatures in dainty dresses whose home will be in an artificial grotto of natural stones, ferns and flowers, forming an ideal fairy palace, whence they will troop forth to lead the grand procession. This will be repeated every evening for the benefit of the sight-seers who may come. The interior decoration of the hall is one of the new departures which the ladies will institute this season. In place of the ever-beautiful but somewhat monotonous decorations of ferns and palms and evergreens, it has been arranged to ornament the walls with mirrors. The scene will be reflected back from every side in an endless succession of bowers and flowers.

HORTICULTURAL HALL ASSOCIATION.—The annual meeting of the stockholders of the Horticultural Hall Association was held Wednesday, with 251 shares represented in person or by proxy. (A representation of only 237 shares was necessary to a quorum.) President Jones in the course of his report says: "The whole

number of shares of stock disposed of to date is 473, there being seven shares still unsold. Your Board of Directors have held three successful fairs during the year, a Floral Fair, held in May last, a Horticultural Fair, held in August, and a Citrus or Winter Fair. * * * Total profit, \$1297.88. We have paid for improvements on the hall, \$1574.47. The building is insured for \$7000, and there is no outstanding indebtedness." * * * As the amount remaining in the treasury equaled a sum slightly over four per cent on the capital stock, a resolution was passed that a dividend of two per cent, or 50 cents a share, be declared and the remainder applied to incidental expenses. The old Board of Directors was unanimously re-elected, and proceeded to business by re-electing the same officers, as follows: Cyrus Jones, Pres.; Capt. Frank Dunn, Sec.; C. T. Settle, Treasurer.

Santa Cruz.

STRAWBERRIES.—Pajaronian, April 12: The strawberry-fields are full of blossoms, and the berries are coming on rapidly. A continuation of the warm weather will give the San Franciscans an opportunity to feast themselves on Pajaro strawberries before the close of next week. The plants are full of berries and the crop will be large. The new fields are all looking well, and will have good crops. L. Martinelli and R. W. Eaton have made small shipments of a few drawers at a time, and received good prices. The last shipment made by Eaton was sold at the rate of \$40 per chest.

THE DRIER A SUCCESS.—A meeting of the stockholders of the Watsonville Fruit-Packing Co. was held Tuesday. A majority of the stock was represented. The following directors were elected for the ensuing year: Jas. Waters, A. Lewis, W. V. Gaffey, G. A. Morehead, Edward White, A. A. Morey, and G. W. Peckham. Sec. Morey's report in reference to the first year's business showed that 135 shares of stock had been subscribed for and paid up, and that 65 shares were unissued; that \$6750 had been paid in for stock; that dried fruit to the amount of \$5867.08 had been sold; that \$500 cash was on hand; that the dried apples in stock were now worth \$1800, and the price advancing; and that wood and lumber to the value of \$200 was on hand. The factory lot, buildings, machinery, boxes, utensils, etc., cost \$4395.19; \$3384.38 was paid for wages; \$4337.97, for fruit. The report shows a profit on the first year's business. Inasmuch as the business was new to all the stockholders, and none of the labor employed had had any experience in the business, the showing is very creditable, and proves conclusively that the business of fruit-drying can be profitably conducted in this valley. The stockholders see enough encouragement in it to warrant running the drier this year on an increased scale, and the suggestion of A. Lewis that they subscribe for the balance of the stock is favorably entertained by many of those who can afford to take more. None of the stock can now be purchased at less than par.

Shasta.

EDITORS PRESS:—Shingletown is situated on a plateau of the Sierras at about 3000 feet elevation. This plateau is out across by several creeks, but otherwise it is quite level for miles. The soil is dark-red, fertile, very productive of alfalfa, potatoes, vegetables, apples, plums, cherries, etc. There is some snow in winter, but no severe cold; summer delicious, especially in strawberry time; water, cool, clear, soft and abundant; soil, easily irrigated, never bakes; remarkably healthy climate—bracing and vigorous. Settlers coming in in considerable numbers. No boom.—P., April 10, 1888.

Stanislaus.

IRRIGATION DISTRICT OFFICERS.—Modesto *Herald*, April 12: In the Modesto Irrigation district election, which took place last Wednesday, the old officers were elected with the exception of J. W. Davison, director of Precinct No. 1, and Mr. Gatlin, of Precinct No. 2. A total of 325 votes was polled. The officers are as follows: Precinct No. 1, G. D. Wooten; No. 2, E. R. Crawford; No. 3, Rob't McHenry; No. 4, A. G. Carver; No. 5, W. H. Finley; Assessor, V. E. Bangs; Collector, T. O. Owens; Treasurer, Isaac Perkins. * * * We were unable to obtain the returns from the Turlock Irrigation district, but the officers elected are as follows: Precinct No. 1, E. V. Cogswell; No. 2, R. M. Williams; No. 3, E. B. Clark; No. 4, C. F. Lander; No. 5, J. T. Dunn; Assessor, J. W. Hanscom; Collector, E. N. Crow; Treasurer, C. N. Whitmore.

Yolo.

THAT HORSE'S LEG.—Davisville *Cor. Democrat*, April 10: The unfortunate horse (whose case, mentioned in my letter of two weeks ago, seems to have excited some little interest) was killed last Sunday, the experiment having failed through an unforeseen accident, which Dr. Bates admits might have been easily avoided. It will be remembered that the appliance to the fracture consisted of a wooden box inclosing the leg, which was filled with plaster-paris; but in order to keep the limb in place, a temporary splint was first applied, and this becoming loosened in some manner, caused a renewal of the fracture after it had almost healed, and rather than renew the effort Mr. Dunfield had the animal killed. Dr. Bates' confidence in the possibility of restoring the fractured limbs of horses and other valuable animals, by this means, remains unshaken, and on the first opportunity the experiment will be renewed with such modifications as his experience in this case shows to be necessary.

NOT ONE!

Not one Agent of OTHER MILLS wrote to us to inquire what Mill it was which was taken down. WE SUPPOSE that each one WAS AFRAID it might be his Mill.

JAMES McCULLOUGH,

Pacific Coast Agent, 123 CALIFORNIA ST., SAN FRANCISCO.

"Bonanza" Hollingsworth Sulky Rake IMPROVED.

For either One or Two Horses,
Twenty Oil-Tempered Steel Teeth,
Works on the Roughest Lands,
No More Broken Teeth.
Wood or Steel Wheels.

Overhanging cleaner in place of the old style sticks. Axles made of steel. Wheels are very strong and tires are bolted to rim of wheel. The very best of lumber is used in the manufacture of these rakes. They are painted and varnished in first class style, and are strictly first-class in every way. WE PUT ON THIS RAKE OUR

PATENT COMBINED POLE and SHAFTS.

Hay Rakes made with these shafts can be used with either one horse or two horses. The cut at left shows it arranged as a pole, or for two horses; the cut at right shows it arranged as shafts, or for one horse. The same parts are used in both cases. The farmer at all times has all the parts with the rake, to make it either a one or two-horse. The change from one to two-horse can be made in a few minutes' time.

Farmers readily see the advantage of this over other rakes, and will buy only those made with Combined Pole and Shafts.

We have had built especially for Pacific trade a 24-tooth "Bonanza" Rake, which will rake two swaths cut by a 4-foot 6-inch or 5 foot Mower.

This is a very popular size and will pay many times over in a season for its small increased price.

THE DAIRY.

"Two Blades of Grass."

EDITORS PRESS:—Riding in the cars in sight of some sand hills in the Santa Cruz mountains a few days ago, I looked at the loose shifting sand of a mountain slope, and then at the State Inspector of Fruit Pests in the next seat.

The question was natural: "What are these sand hills good for?" A number of things were suggested besides grapevines. A certain *Acacia* (a *molleissima*) for tanning purposes was said to be hardy, of rapid growth, and would probably grow well in this sand. A forage plant was also named. In the Coast Range the Monterey pine (*Pinus insignis*) and the Monterey cypress (*Cupressus macrocarpa*) would undoubtedly succeed. Their natural habitat is in the sand.

Climbing up and down these sandy slopes about the Bay of Monterey, I have found several species of perennial grasses. They grow in bunches and form a choice bite for horses and cattle. The roots are not easily killed. They send up the blades with the first rains of early winter, and they are the last to disappear with the coming of the dry season.

The only thing lacking is they are too few and far between. Now, the man who can succeed in making these bunches grow near each other, so as to cover these sandy places and otherwise barren hills, will be a benefactor to this region of California, as well as to the world. There are many thousands of acres of just such land almost worthless, without some plant or plants can be discovered suitable for successful cultivation on these sand hills.

Can the experiment stations in different parts of our State find a subject of more importance? At some future time I will make a list of some of the grasses that find a home in such places.

C. L. ANDERSON.

Santa Cruz, Cal.

[The topic broached by Dr. Anderson is very interesting and important. The subject of adaptability of forage plants will be a leading one at the experiment stations, but they will not have shifting sands because such situations would not be suitable for other cultures. The best plants for sand hills will be learned after awhile by individual enterprise in experimenting, and Dr. Anderson can do much by determining the grasses he mentions, and gathering seed, etc. Then will be found some one with suitable land to try the experiment of getting a good covering of such growth on the sand. We shall be glad to hear from him further on the subject.—EDS. PRESS.]

Dairy Doings of Netherland Prince Stock.

Some of our Holstein breeders already have imported animals from Smiths, Powell & Lamb having Netherland Prince blood, and will be interested in the following statements showing, as the breeders claim, "why he is the greatest butter-bull of the breed:"

His daughter, commencing at 28 months old, made 21 lbs. 10½ ozs. of butter in a week and 80 lbs. 6 ozs. in 30 days, averaging for a week a pound of butter from 13 23 lbs. of milk, surpassing all other records made at that age.

His three-year-old daughter made 23 lbs. 10½ ozs. of butter in a week and 93 lbs. 1½ ozs. in 30 days, averaging for a week a pound of butter from 18.44 lbs. of milk, being the largest record of any living cow of that age and breed.

His three-year-old daughter at the public butter trial at the New York Dairy Show surpassed by over six per cent all cows of all ages and breeds, excepting only her own dam.

One of his daughters at 25 months old, on ensilage and hay only, having had no grain for eight months, made 15 lbs. 1 oz. of butter in a week, averaging a pound of butter from 15.44 lbs. of milk, excelling all other records for that age and feed.

Four of his daughters (two 2 years old and two 3 years old) averaged 20½ lbs. of butter in a week, averaging a pound of butter from 15.83 lbs. of milk, far surpassing all other records by heifers of same age and number by any bull of the breed.

Six of his daughters (four 2 years old and two 3 years old) averaged 18½ lbs. of butter in a week; averaging a pound of butter from 16.67 lbs. of milk, exceeding all similar records.

Eight of his daughters, five two-year-olds and three three-year-olds, have records that average 16 lbs. 11½ ozs. for a week, 16.84 lbs. of milk being the average amount of milk to make one pound of butter.

Three of his grand-daughters (two 2 years old and one 3 years old) (the only ones tested) averaged 15 lbs. 10 ozs. of butter in a week, showing that he transmits his butter qualities to the third generation.

Ten cows containing 63 7-10 per cent of the same blood as Netherland Prince, including one 2 years and four 3 years, averaged 20 lbs. 3 6-10 ozs. of butter in a week, a statement that can be made about no other bull of this breed.

His dam, two of her daughters and seven of her grand-daughters (two 2 years old, three 3

years old and two 4 years old) averaged, for the 10 head, 18 lbs. 15 6-10 ozs. in a week, an exhibit which we have not seen equaled by the dam of any bull.

His sire is also the sire of three heifers, which, at an average age of 3½ years, averaged 16 lbs. 11 ozs. of butter in a week, and his grandsire also sired four cows which averaged 20 lbs. 4½ ozs. in a week, showing that his paternal ancestors were remarkable butter bulls.

His grandam is the dam and grandam of five cows which averaged 20 lbs. 2 3-5 ozs. of butter in a week, and his g-g-dam is grandam of three cows which averaged 20 lbs. 13½ ozs. in a week, showing that his maternal ancestors for three generations transmitted butter qualities in a remarkable degree, thus establishing the fact that the rare butter qualities of this bull are not accidental, but the legitimate result of breeding for butter through every ancestral line.

Sixteen cows of the same family have made records which averaged 20 lbs. 1 13-16 ozs. of butter in a week, averaging a pound of butter from 18.82 lbs. of milk, surpassing all other families of the breed.

Smiths, Powell & Lamb, Lakeside Stock Farm, Syracuse, N. Y., have just issued a second edition of their 1888 catalogue, which should be in the hands of all breeders and stock fanciers.

New Mexico.

Perhaps the people of California have but little anxiety to know anything of New Mexico. But the restless Anglo-Saxon is fast invading that knobby portion of Uncle Samuel's domain, and so soon as they get a firm foothold there this State will find in her its most formidable rival in growing fruit and many other of the products of rich soils and sunny climes. The great southern valleys of New Mexico have a vast amount of the richest soils finely placed so as to be covered with water, and plenty of water to bring to them, and when once placed under irrigation they are wonderfully productive of all crops and fruits not strictly tropical. Everything can there be grown to perfection that makes fruit-growing and all other branches of agriculture profitable.

The great valleys of the Canadian, Pecos, the Rio Grande and their tributaries give room for thousands of homes, with a climate the next best—California always first—on the continent for health, comfort and adaptability for all crops. With her mountains—of which she has a great supply, some to spare—filled with inexhaustible mines of the precious and all the baser metals and bituminous and anthracite coals. So long as these minerals last she will have a home market for all she can produce.

There are, besides, millions of acres of high, dry tablelands and mountains for stock range. The soil on many of these high plains is rich—some of it very rich, with the surface in great part finely adapted for cultivation and with a reasonably good climate adapted to the growth of nearly all crops except corn, and lacking only water to become the comfortable homes of millions.

Can water, precious water, be obtained and brought to these grand plains? This is one of the questions our Uncle Samuel should solve, and if the best engineering skill can take it there in plenty it should be done. These thoughts are suggested by the following letter. We have not the pleasure of acquaintance with the writer, but if the statements seem attractive to any reader we suppose they can easily be verified:

EDITORS PRESS:—I will thank you if you will place me in communication with a reliable and experienced nurseryman who would like to establish himself in this inviting and promising field. This is one of the finest locations in the whole country for a nursery.

This place is in the heart of the Pecos valley, whose soil and climate are especially adapted to all kinds of fruit, plant and vegetable growth. It abounds in never-failing streams, which are admirably adapted, as are the lands, for irrigation. Ditches are being rapidly built, and soon an immense area of the best lands will be under water. But a few years ago the country was occupied by Indians. Now good order and security reign, and soon it will be filled with industrious people planting orchards and cultivating vegetables and the vine.

Enough has been done by farmers to demonstrate the excellence, variety and wealth of production of every kind of fruit, plant and tree, not tropical. There is great demand already for fruit and shade trees, for planting on a large scale. Yet there is not a nursery within 250 miles by wagon, and they are not satisfactory. Apple trees—and this is the home of the best apple—are worth 50 cents apiece. Everything else is in proportion.

There is a fortune for the right kind of a man who will establish himself here and prepare for the immigration which is setting in. A gentleman here will put in 160 acres of the best land, under never-failing ditch, owned by himself, and take an interest in the nursery plant. It is a splendid opening for a man who has intelligence, skill and energy. There is no better climate on the continent, and no place where a man can be surrounded by greater promise and possibilities of the future. Any one interested in this proposition can address the undersigned.

JAMES H. HOPKINS,

Roswell, Lincoln Co., New Mexico.

GOOD HEALTH.

The Human Stomach.

Dr. C. N. Ellenwood of this city, in a recent lecture before the Cooper Medical college, gave the following description of that wonderful organ—the stomach: The doctor described the average healthy stomach as a muscular sac, lined with a mucous surface, the whole resembling the winding of a Scottish bagpipe. It is from 13 to 15 inches long, and its walls are of the thickness of about three sheets of blotting paper. In a transverse direction it is about five inches and its normal capacity is about five pipes. Experience or education has incurred in the stomach the habit of distension, an important function of which the old nomads have availed themselves. But in our present felicitous condition, when three meals are taken daily and easily obtained, there is no need for such an education of the stomach, and five pipes is even sufficient capacity for any Thanksgiving dinner.

The wonderful activity of the stomach in the assimilation of food, the revolving of the latter in from about one to three minutes in order to be completely churned up to facilitate digestion, the expulsion of the soft particles of food into the intestines, the retention of the hard substances followed by their expulsion, if not of too great caliber, were in turn described.

The muscular fibers producing the churning process and the propulsive power in ejecting the juice to precipitate digestion, were treated of in turn.

Considerable attention was also devoted to the wonderful structure of the mucous membrane, the depressions in whose surface resemble vaccine scars, being open mouths, 1.400 of an inch in diameter. They are thickly placed, and are in close relation with the blood-vessels, supplying the material by which the gastric juice is elaborated. How these glands form the juice, the speaker said, was extremely difficult to explain, but he made the comparison to the growing and nutrition drawing roots of plants, the blood in the glands furnishing the nutritive material.

During the intervals of digestion the stomach is inactive, and the membrane is covered with a translucent, viscid, alkali fluid, furnished by the goblet cells. Fright from a sudden shock arrests at times for hours the process of digestion; so does any depression of the system. Fear, rage, excitement, stimulants, or the overloading of the stomach have the same effect, all of which teaches that we must, when sitting down to the table, be free from the depressing influences of the mind over business or other matters, and appreciate the danger of depressed physical or mental conditions of every kind. Busy people who are the ones to abuse their stomachs most by quick eating and by having their minds weighted with the cares and troubles of business, are the first to complain.

The daily secretion of gastric juice in the stomach is 14 ounces, which is passed off with the assimilated food, and the secretion is proportionate to the amount of food taken, but less when eating is observed too frequently, while overloading likewise delays digestion.

The process of the transformation of foods in the stomach and their dissolution into component parts to be absorbed and serve the purpose of nutrition to the body, were elaborated upon, but the lecturer freely admitted that these chemical and physical changes were not yet thoroughly understood. The speaker inveighed against the use of condiments, highly seasoned articles of food, and the pleasures of the table generally, asserting that the consumption of plain, simple and wholesome viands, intelligently cooked and gracefully served, are by far more conducive to good health and sound intellect, between which and the stomach there is a close relation.

The speaker also ridiculed the saying that to eat well is to leave the table with the feeling that one could eat more. His advice was to eat enough to satisfy the appetite, but not leave the table either hungry or feeling stout, heavy, or uneasy.

TOO MUCH HUGGING AND KISSING OF CHILDREN.—It is precisely in that natural aptitude for emotion, in that type of mind which is exquisitely sensitive to impressions and generously swayed by sympathetic feeling, that one of the great dangers to the perfection of womanhood, physical and mental, may be said to reside. Many and varied influences tend to increase this emotional excitability until it often becomes a fixed habit of mind; as undue sensibility of the supreme centers to emotional ideas is created, which can only be maintained at the expense of sound health of body and of mind. First among these are certain home influences that are brought to bear upon a little girl from her earliest childhood, which foster in her self-consciousness and introspection. Dr. Taylor says: "In my large practice among children I am certain that scores are literally killed by the excessive amount of emotional excitement which they are forced to endure. All this hugging and kissing and talking to them is to excite responses of the same emotional nature in the child for the pleasure and gratification of the parents and friends." And again he says: "I believe that three fifths of the spinal diseases which occur in children are directly traceable to mental overaction. And this because a large proportion of these cases get well without other treatment than a withdrawal from the exciting cause of emotional disturbance."—*Pop. Science.*

Paine's Celery Compound

For The Nervous
The Debilitated
The Aged

CURES Nervous Prostration, Nervous Headache, Neuralgia, Nervous Weakness, Stomach and Liver Diseases, and all affections of the Kidneys.

AS A NERVE TONIC, It Strengthens and Quiets the Nerves.

AS AN ALTERNATIVE, It Purifies and Enriches the Blood.

ALILA!

The Arcadia

—OF THE—

SAN JOAQUIN VALLEY!

THERE DOES NOT EXIST IN THIS VAST extent of country a section so manifestly destined for the site of

A PROSPEROUS TOWN,

Supported by the demands of a rapidly and steadily increasing population, as Alila. THE ENCOURAGING NUCLEUS is already there, for Alila now possesses a well-conducted and

LIBERALLY FURNISHED HOTEL,

Several well-appointed stores, and, in addition to these, that most important feature and best evidence of progress, a

Handsome and Spacious Schoolhouse,

Which stands nearly, if not precisely, in the center of the town-site. Alila is envied by

A MOST FERTILE COUNTRY,

A soil of surpassing richness, with the capacity of sustaining, in comfort and prosperity,

Thousands of Industrious Settlers.

The resources of this land are illimitable. At this season, in the surroundings of Alila, the plow is busy in every direction.

MILES OF GRAIN,

Soon to wave in luxuriant beauty above the sod now decked with wild flowers, will be a most substantial ornament to

ITS BROAD ACRES.

This scene of agricultural activity and brisk and intelligent cultivation is

A GRAND ASSURANCE

Of what the future must bring forth. The Southern Pacific Railroad

PASSES THROUGH ALILA,

And the stations and sidings there are about the best on the line.

ALILA

Is in Tulare County, 22 miles south of the city of Tulare, on the main line of the Southern Pacific Railroad.

Bovee, Toy & Co.,

19 MONTGOMERY ST.,

Are now offering a limited number of lots at private sale in ALILA, and intending purchasers should not delay in making their selections, as a

SERIES OF IMPROVEMENTS

Have already been inaugurated, consisting of grading streets, planting them with shade trees, increasing the irrigating facilities, and shipping material for the

ERECTION OF BRICK STORES

Upon the main street of Alila. This is a

Superb Opportunity for Investment,

Because the time is close at hand when

Wave after Wave of Eastern Immigration

Will fill up the great San Joaquin Valley, and every dollar placed in real property there will yield a four-fold return.

There are a few facts in connection with this property to which we desire to call particular attention:

First, the extreme richness of the soil has attracted a superior class of population, who are farming the land in an intelligent and progressive manner.

Every section in the vicinity of Alila and for miles around contains from two to four houses, presenting a prosperous and comparatively well-settled country, owing to the fact that the land is held in small holdings, and not in those immense tracts of single ownership which characterize other portions of the valley.

There is no other locality so well adapted for successful fruit and raisin culture.

Again, Alila lies in the direct line of Walker's Pass, the lowest point in the Sierras through which other overland roads coming into the valley will in all probability lead.

For maps and further particulars apply to

BOVEE, TOY & CO.,

19 Montgomery Street, S. F.

Miramonte Colony

—IN THE—

GREAT ARTESIAN BELT,

KERN COUNTY.

This tract comprises 2640 acres, all level land and ready for the plow. In this colony is the

Greatest Artesian Well in the World,

And a perpetual water-right goes with the land bought. Tracts of 20 acres will be sold for \$500—only one-third cash; balance, one-third in two years, and one-third in three years, with ordinary interest.

Apply at once for best selection to

C. H. STREET & CO.,

(Successors to Immigration Association of California).

Santa Barbara Flowers and Fruit.

That was a happy arrangement by which Santa Barbara's yearly festival of flowers was held at the same time with the Fruit-Growers' Convention; and the dear old Rose Fair appears to have been as successful as ever, though handicapped with the ponderous modern title of "Tenth Annual Floral and Citrus Exhibition of Santa Barbara County."

Before the pavilion was thrown open, Tuesday afternoon, April 10th, the deft and busy hands of many tasteful and devoted workers had transformed its barn-like interior into a charming tropical garden.

The space was divided into different sections, which were allotted to the five wards of the city and to the surrounding districts of Goleta, Carpinteria, Montecito and the Mesa. The floral exhibits were disposed around the edge of the hall, leaving the center for the fruit display.

The first thing to catch the eye of the entering visitor was "Flora's Greeting," in great letters of bright yellow marigolds on a background of dark-green parsley, which covered the front of the stage, with a Maltese cross of marguerites, and a shield of marguerites, geraniums and violets at either end.

To the right of the entrance was the Mesa table, heavily hung with tree moss and trimmed with smilax. The name "La Mesa" was worked out in delicate yellow blossoms on a green cypress bed. A basket of beautiful "Gloire de Jon" roses from the Meigs place were from a bush planted 35 years ago. This display embraced a variety of roses, a large bed of ferns and flowers, and a number of callas, some of which measured over nine inches in diameter.

The Fifth Ward made a superb exhibit, in which Cherokee roses from Mission canyon, and Miss Julia Noble's pansies, were especially admired. Its most striking feature was a huge elevated basket, overturned, out of which poured a copious stream of roses to the floor, ten feet below.

In the booth of the Second Ward was a large mirror, encircled with smilax, ferns and callas, and surmounted by a great basket of roses. On one side was a panel of delicate blue wisteria, and stands beneath were freighted with cut roses in variety, wild red-flax blossoms and grasses, while at each end of the booth stood a vase of calla lilies.

In the Goleta display was a pagoda, seven or eight feet high, built of roses and honeysuckle, and thatched with palm leaves. Within was a figure representing Santa Barbara clothed in flowers. On the table, among several other designs, was a pair of scales, composed of small white flowers on a green bed. One scale bore a leaf inscribed "Santa Barbara," which seemed to outweigh the "world" in the other. Jos. Sexton's fine output, beside all the choice roses and carnations, included a magnificent display of Mammoth verbenas in pots. They were raised from seeds sent out by Henry Dreer of Philadelphia. Some of the blossoms are larger than a quarter dollar and the colors are gorgeous.

The Montecito exhibit was a dainty arrangement of wild and cultivated flowers and young palms in pots, under an arch of orange and pepper branches. A plate of large white Sharpless strawberries grown by G. B. Parma attracted much attention. Edward Herr had an exhibit of ferns from the Yosemite mounted on cards, and rare specimens of ferns from New Zealand and Australia, among them the unique kidney-fern.

The wall behind Carpinteria's floral table was almost hidden by palm leaves and orange boughs with clusters of the golden fruit. Here H. C. Ford exhibited a vase of La France roses, which were pronounced the largest grown in Santa Barbara this season.

The display from the Third Ward was arranged in the shape of a V, and looked like a nook in some dark canyon, the sides covered with ferns and delicate plants. There were roses in abundance, and rare flowers of several kinds. Overhanging these were some sprays of yellow banksia roses, four or five feet long, and a solid mass of bloom, which were much admired.

Against the wall in the First Ward's booth hung a picture—a bunch of roses on a canvas of white magnolia with a frame of yellow marigolds. The name of the ward appeared in letters of ivy and ferns against the arch of evergreen that spanned the tables. Here were some of the finest roses in the fair and a large variety of garden flowers.

In the alcove assigned to the Fourth Ward, under a palm-leaf arch, was a table covered with baskets of roses in great variety, and flowers of many kinds in baskets, vases and graceful designs. Several specimens of the bird-of-paradise flower proved especially attractive to stranger guests.

To the left of the entrance was an exhibit from Orchard Dale, containing a great number of named roses, besides dishes of pansies and a collection of wild flowers, among which were larkspur, tidytips, white flag, wild lilac and buttercups. A miniature adobe house, with pillars in front and red tile roof, was a feature of the exhibit.

In front of the last-named booth was a charming display of flowers from the Ontare ranch, among which Dachesse de Brabant roses were eminent.

By the fountain in the middle of the hall were set tables of fruit from Montecito, Goleta

and Carpinteria, among which were fine specimens of loquats, sweet limes, oranges and apples. The Cooper ranch table was covered with oranges, lemons, sweet limes, Mexican limes and olive oil. There was also a good showing of preserved fruits from the Mesa.

The evening attendance was very large; the scene was then brilliant under the rays of five 2000 candle-power electric lights; and the City Guards orchestra enhanced the delights of Flora with strains of music.

The Merced Real Estate Sale.

What was the largest and most successful real estate sale by auction which ever occurred in California, took place last week at Merced. Our readers are aware of the extensive improvements in the way of introducing water for irrigation, which has recently been inaugurated in that county by the introduction of a very large body of water from the Merced river. Ever since the great celebration which attended the introduction of this water into Lake Yosemite, the attention of capitalists has been directed to the advantages which this point presents for manufacturing purposes and for the supplanting by grape and general fruit culture of wheat-growing, which has hitherto been almost the only industry known in that portion of the San Joaquin valley. By the introduction of a plentiful supply of water the rich soil in and about Merced may be made to produce abundantly almost every variety of fruit—not excepting the orange, the lemon, and the fig. The soil is generally composed of a reddish sedimentary deposit, several feet in thickness and very similar both in color and substance to the famous orange-land of Los Angeles and San Bernardino counties. Scattered here and there through the town of Merced, the visitor may see numerous orange trees, young and old, which have withstood the severe test of the past winter, without any damage from frost. At the time of our visit—during the recent land-sale—there was no fruit upon the trees; but we learned from unimpeachable testimony that the fruit produced is not only fair to the eye but delightful to the taste, while the trees are annually loaded with an abundant crop. A sufficient extent of vineyard and orchard has already come into bearing to give practical and indisputable evidence that the locality is eminently suited to such culture.

In addition to the large supply of water provided by the Canal and Irrigation Co., which, through Crocker & Huffman, have spent over one and a half million of dollars in such improvements, there are other and abundant supplies of water on the west side of the railroad by other canals. Flowing artesian water is also obtained at moderate depth at a distance of about two miles west of the railroad. With this water natural gas is also found. Over one of these wells a gasometer has been placed to collect the gas, which is conveyed a short distance to the residence of the proprietor, where it is used for cooking and heating purposes. This is a heat-producing rather than an illuminating gas; very little light is produced. The writer had the pleasure of examining the way in which the gas is used for cooking purposes.

It is the plan of the promoters of the Canal and Irrigation Co. to utilize their water largely for manufacturing purposes, which can be done without any loss for irrigating purposes. It is expected that by this advantage and the fact that the railroad passes directly through the place, quite a manufacturing town will be built up at Merced.

A number of centers for separate colony enterprises have been laid out at points surrounding Merced, and at distances varying from two or three to six or seven miles from the town. There has already been quite an active inquiry for lands in these colonies, which are being disposed of in blocks of 10, 20 and 40 acres or more. The famous Buhach ranch has been made the center of one of these colonies, and the indications are that fruit-growing there will be found much more profitable than the culture of the famous plant which is adding so much comfort and relief to our people from its deadly effect upon insects, when properly prepared for that purpose.

These varied advantages have formed the inducement which has recently attracted so much attention to Merced, and which has created such a desire to invest in town lots and blocks at what must in the early future become an important center of business for the large and industrious population which will soon occupy the six or eight miles square or more surrounding the present town.

When the intention of the promoters of these varied enterprises was made known through the newspaper notices, advertisements, posters, etc., so great an interest was created that what was at first expected to turn out only an ordinary sale became the largest and most remunerative auction sale which ever took place at any interior point in the State. This was made possible from the fact that capitalists some days before the sale went to Merced, looked over the country carefully and satisfied themselves fully with regard to the future possibilities and probabilities of that growing town. The value of town lots and blocks were estimated by a careful examination of the farms, colony tracts and other outside lands in the surrounding country, for which there could be no other possible business center than the present town of Merced.

Although the crowd which assembled at the

sale was not large, it was composed of substantial men. We noticed among the buyers such men as Greenwood & De Wolf, Dr. Cornwall, H. J. Craig, T. V. Hogan, J. Newman, L. Hamilton and others of San Francisco, Mr. Wilson of Solano, F. J. Field of Monterey, Dr. Barton of Fresno, Mr. Hastings of San Jose, and many others from abroad added to a large number of local buyers.

The sales footed up a total of \$376,000. Single lots averaged from \$350 to \$1000, while blocks sold for from \$7000 to \$12,000. One very eligible block near the El Capitan hotel and railroad station was knocked down for \$46,000. This was an exceptional block near the center of the town and one which has been heretofore reserved for sale.

Much credit is due to the indefatigable energy and skill of Briggs, Fergusson & Co., real estate agents of this city, who had the sole charge of promoting and managing this important sale. Judicious advertising in honest and reliable phrases and through the medium of well-known journals, with straightforward and manfully fair dealings at the sale, together with the intrinsic merits of the property, was what led to a success which more than doubled the result that had been expected from the enterprise by those who were most largely interested in the outcome. We understand that Messrs. Briggs, Fergusson & Co. contemplate other important sales in the near future, of which we shall from time to time inform our readers.

Burlap Bags.

NEW YORK, April 18.—The hand of California has been felt in this market for several days. The flour-mills sent out orders for all second-hand burlap bags that can be had, and the result of this has been to make the price very firm at 5½ cents each. Albert Weiler, broker and commission merchant, who represents the mills in this matter, said that he has contracted since this demand began for probably 250,000 bags, at prices ranging from 4½ cents each to 5½ cents. One order alone was for 100,000, and contracts already cover the April and May shipments.

Orchard Cultivation.

EDITORS PRESS:—In your issue of April 7th I noticed an article on "Orchard Cultivation." I will agree to a great deal contained in the article, but I cannot agree with the writer when he says that no one machine is capable of doing the work after the plow. He bases his judgment on 15 years' experience from working one kind of soil. I, too, have had about 15 years' experience in cultivating the soil of all kinds to be found in the State of California. I have used all kinds of cultivators and harrows, including the Lubin pulverizer, which I have been using almost continually for the last three months. I must say that I have never seen any machine or combination of machines that can do the work done by the Lubin, at the same expense. I have found from practical test; that fully 20 per cent can be saved in the cost of cultivating an orchard or vineyard by the use of the Lubin over other machines.

Time is a very valuable factor in the cultivation of an orchard, and I find the secret of successful cultivation is to apply the best machinery at the proper time. I consider the Lubin the best machine, because it cultivates, pulverizes, and harrows the ground at one operation, and who can dispute that a machine capable of doing such work is of inestimable value? The Lubin will certainly do this work, if used at the proper time. The San Jose and Acme machines are good machines, and will, under certain conditions, do good work, but for all kinds of work on all kinds of soil, I think the Lubin is the chief.

Sacramento.

F. A. JOHNSON.

Hints to Inventors.

Most inventions, if novel, are very valuable. Therefore an inventor should be very careful to secure his full rights, and that too without jeopardizing them in the hands of unknown agents. Men who promise to do something for nothing (until they get your invention into their hands) are not likely to be the best or safest attorneys. Good services are certainly worth paying a reasonable price for.

Those who advertise most extravagant promises are not always the most economical in the end to deal with. Our agency can, and does, do far better on the average for inventors than any remote agents possibly can do. Our terms are very reasonable for the prompt and first-class work which we guarantee to all who patronize us.

DEWEY & CO.,

MINING AND SCIENTIFIC PRESS PATENT AGENCY,

Be Sure to Notify the Publishers.

If this paper is sent to you beyond the time you wish it, it is important that you notify us by postal card or letter immediately.

The date to which your subscription is paid is marked on the label at the right of your name. We do not intend to send the paper to any one who does not want it, but if you continue to receive it without notifying us, we shall hold you responsible for payment for the full time the paper is sent.

Remember a postal card costs but one cent, and it takes but a moment to write us a few lines, asking us to discontinue sending the paper and thus avoid all misunderstanding. In writing to us, be sure to give us your name in full, the name of the paper and the name of the postoffice at which the paper is received.

[Original.]

Books and Authors.

BY CALLIE L. BONNEY.

ALDEN'S MANIFOLD CYCLOPEDIA OF KNOWLEDGE AND LANGUAGE. Volume I. Sixty-five cents for half morocco binding, postage 10 cents extra. John B. Alden, publisher, 393 Pearl street, New York.

This volume heralds one of the largest and most desirable literary achievements of the age, and is unquestionably the best production of the kind we have seen, containing all desirable features of the standard cyclopedia, and far surpassing them in its lighter and more convenient form, at a cost so low for the amount of valuable matter furnished that one can only comprehend it upon actually seeing the book. Volume I, in clear-faced brevity, from A to America inclusive, contains 630 pages, about 75 illustrations, and treats clearly and skillfully over 1500 subjects; and this is a fair indication of the rich harvest in store for every subscriber to the Manifold Cyclopedia with the issue of each new volume. The work, of value to any library, is especially desirable in the country home, which if without a cyclopedia has no recourse to a public library; and to that great majority who cannot afford to pay \$6 per volume for such a work, Mr. Alden's publication is of inestimable value, being a first-class print at one-tenth the cost.

VOLUMES II, III and IV of Alden's Manifold Cyclopedia, embracing subjects from Amer. Brit. to Bilberry, fully justify the high praise accorded the work in a former review. Accurate, concise, and covering all subjects, one ordering a specimen copy is sure to retain it and to order the succeeding volumes, which cannot fail to give satisfaction.

JUDAISM ON THE SOCIAL QUESTION. By Rabbi H. Berkowitz. John B. Alden, publisher, New York and Chicago.

This small volume presents in the form of 13 lectures the following subjects: Definition; Sources of the Social Difficulty; Have the Poor Grown Poorer? How Did Moses Solve the Social Problem? The Social Chaos of the Dark Ages; The Rise of the Modern Free Laborer; The Complaint of the Modern Laborer; Violence the Proposed Solution; Socialism, etc.

The subjects are treated in a clear, concise way, which shows the able expounder thoroughly conversant with his topic; which he takes hold of with the regret that "There is a sentiment abroad which is a shame to the intelligence of our age—a sentiment which declares that the pulpit is exclusively for what is called 'religious talk.' Aught else sacrilege even though that something else threaten the very life of all religion, even though it threaten the dissolution of society itself." The Rabbi speaks scientifically of the various phases of the subject, religious, legal and historic, and the work is one that will not fail to command the attention of those interested in this great question of the day. The writer's strong good sense may be seen in the assertion that "Justice at its best will extirpate pauperism—charity at its best will alleviate poverty; but as to abolishing it, this will never be, this never can be accomplished—as long as the difference in human ability and energy and worth continues; as long as some will outstrip others in exertion, and gain more; as long as there are those who will never save or deny themselves in the present for the days of helplessness or old age. This difference, indeed, is the basis of all industrial effort and progress."

Literature, the thoroughly alive little weekly published by Alden, continues to advance.

Steam-Heat Evaporators.

The Acme evaporators introduced by Messrs. Batchelor & Wylie in 1887 were extensively used and received the highest recommendation. The demand was so great last season that there were not driers enough to fill the demand. Mr. James Wylie of the firm has succeeded to the interest as sole agent for the Pacific Coast. Parties wishing to secure one of these driers should put in their order at an early date in the season.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

As other makers IMITATE our Giant Powder, so do they Judson, by Manufacturing a second-grade, inferior to Judson.

BANDMANN, NIELSEN & CO, General Agents, San Francisco.

JUDSON POWDER,

The Only Reliable and Efficient Powder For Stump and Bank Blasting. From 5 to 20 pounds blows any Stump, Tree or Root clear out of ground at less cost than grubbing. Railroaders and Farmers use no other.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOSBIE—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

DR. J. KOSBIE, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully, E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equalled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 18, 1888.

Continued hot weather up to Sunday caused considerable complaint from nearly all grain-growing sections, but with cooler weather since they are less pronounced, although all concur in saying that rains are sadly wanted in fully one-quarter of the localities, wanted in one-half very soon, while in the other quarter they can do without rains the remainder of the season. Trading the past week in farm products has been quite large, owing to the forcing weather being in favor of garden truck and small fruits for early marketing. European telegrams have given a uniformly strong market for wheat throughout the week. The following is today's cable.

LIVERPOOL, April 18.—Wheat—Rather easier. California spot, 6s 6½d to 6s 9½d; off coast, 33s 3d to 33s 6d; just shipped, 33s 0d; nearly due, 33s 0d; cargoes off coast and on passage, firm; Mark Lane wheat, firm; wheat on passage to Continent, 32s 0d to 32s 6d; wheat and flour on passage to U. K., 2,204,000 qrs.; French country markets, firm; wheat in Paris, firm; flour, turn dearer; weather in England, showery.

Weather and Crops.

WASHINGTON, April 15.—The weekly weather and crop bulletin says: The weather for the week has been favorable for growing crops in all agricultural districts. Reports from the Southern States show that it was favorable for cotton and cane, and that small grain crops have been affected favorably. The season is probably 10 days late in the middle Atlantic States, and from 15 to 20 days late in the Northwest, where seeding is progressing slowly.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Date.	Cash.	April.	May.	June.	July.
12.....	98½	91½	91½	90½	89½
13.....	98½	91½	91½	90½	89½
14.....	98½	91½	91½	90½	89½
15.....	98½	91½	91½	90½	89½
16.....	98½	91½	91½	90½	89½
17.....	98½	91½	91½	90½	89½

The closing prices for wheat have been as follows, at Chicago:

Date.	Cash.	April.	May.	June.	July.
12.....	74	73½	73½	73½	70½
13.....	74½	74½	74½	74½	80
14.....	75	74½	74½	74½	81½
15.....	76½	76½	76½	76½	83
16.....	76½	76½	76½	76½	83
17.....	76½	76½	76½	76½	83

CHICAGO, April 18.—Wheat—Easier; cash, 79½c; May, 80½c; June, 81c. Corn, lower; cash, 55½c; May, 57c; June, 54½c. Oats, easy; May, 32½c.

NEW YORK, April 18.—Wheat—95½c to 95½c for cash, 92½c to 92½c for May, 92½c for June, 92c for July and 90½c to 91c for August.

NEW YORK, April 17.—The market opened wonderfully excited, and the members of the Exchange violated the rules in their efforts to buy. At this point an early rumor of the death of Emperor Frederick and the excitement of the crop situation, together with the buying craze which comes with any successful bulge, caused prices to jump at one time nearly 2 cts over the outside prices on Monday. The realizing later brought a sharp reaction which wiped out part of the advance. The close at 1 P. M. for May was 82c, or ½c better than the top and closing price of last night. The close for the day was ½c less. The feeling just before the close was heavy. Generally conspicuous on the bull side to-day was John Cudahy, Armour's partner, who was backed by the country and the local bulls. Another leading figure was Leopold B'um, who closed out a line of about 1,000,000 bu. of May at 82c. While other market were not as strong as here, everything at home and abroad helped the upward tendency.

Valencia Raisins.

NEW YORK, April 17.—Advices from Denia show the quantity of Valencia raisins shipped to the United States and Canada, up to March 24, to have been 1,125,516 boxes; this is about 2000 boxes less than for the corresponding period the preceding year.

Eastern Wool Markets.

NEW YORK, April 16.—Wool has been without much attention in the market, business for the most part being in small lines and prices barely steady. Sales—42,500 lbs domestic fleece, 31¢ to 31½¢; 10,000 lbs unwashed fleece, 26¢; 30,000 lbs Texas, 18¢; 15,000 lbs Oregon, 23¢; 25 bags scoured Texas, 44¢; 50 bags scoured Colorado, 46¢; 75 bags scoured Utah, 55¢; 100 bags scoured Montana, 53¢; 12,000 lbs Southern, 17¢; 36 bags super, 31¢; 62,000 lbs New York scoured; Texas, 3000 lbs scoured; pulled, 12,000 lbs Territory, 50,000 lbs spring California, 15,000 lbs Australian, 85 bales East India, 97 bales Persian and 90,000 lbs domestic pulled on private terms.

BOSTON, April 14.—The wool sales during the week foot up 3,667,000 lbs, including 985,000 lbs foreign. There were sales of 40,000 lbs California spring and Oregon at 14¢ to 14½¢, and 80,000 lbs California fall at 12¢ to 12½¢.

California Products in Chicago.

CHICAGO, April 14.—California oranges sell well with the exception of seedlings. Quotations are: California Riverside oranges, 128 and 226, \$3.50 at 3.75; other sizes, \$3.35 to \$3.50; do seedlings, \$2.75 to \$3. Riverside Navel, \$4.50 to \$5.50; do other kinds, \$3.50 to \$4. California lemons, slow, \$1 to \$1.50 per box.

California dried fruits are in moderate sale. The market rules steady, with the present supply about fair, but considerable less than some time ago. We quote: Apricots, sun-dried, ½ lb, 10½¢ to 11½¢; bleached, prime do, 14¢; do choice, 14½¢ to 15¢; do evaporated, unpeeled, 13½¢ to 15½¢; do peeled, 17¢ to 22¢; plums, unpeeled, ½ lb, 6¢ to 9¢; pitted, 10½¢ to 11¢; prunes, small, ½ lb, 7¢ to 9¢; fancy large, 11¢ to 13¢; raisins, loose Muscatels, 2-crown, ½ box, \$1.35 to \$1.45; do 3-crown, ½ box, \$1.50 to \$1.65; do London layers, ½ box, \$2.25 to \$2.35.

The market for beans is quiet. A few days ago a carload of California beans was sold, and this is the only sale of any importance during the week. The inquiry is rather moderate, for most jobbers are supplied for the present. The arrivals are small, and

parties who hold beans are, as a rule, rather firm in their views, and in consequence of this former prices are maintained. California, according to quality, \$2.15 to \$2.75.

Trade is very fair for choice grades of hops. Of these the supply is gradually becoming smaller, and is now rather light. Prices rule steady and firm. Common qualities do not share in the firmness, for of these there is a good stock, with little or no inquiry. Quotations range: Pacific Coast, choice, 12¢ to 13¢ ½ lb; common to prime, 9¢ to 11¢. New California potatoes, 4¢ ½ lb. California strained hops, 7¢ to 8¢ ½ lb.

Miscellaneous.

NEW YORK, April 16.—The best marks of 3-crown raisins are: stiff at \$2; 2-crown, \$1.40 to \$1.55. All are jobbing well, with but few Malagas to come. Fresno layers are worth \$2.40 to \$2.50.

There is no movement in dried fruits except apricots, which sell at 14½¢.

Lima beans fell off to \$2.80 to \$2.85, under fresh supplies. The season has been late, and green stuff has divided the trade.

There is a steady brewers' demand for hops. State new range, from 9¢ to 14¢; Pacific, 8¢ to 12¢; old, 3¢ to 6¢; German, 16¢ to 22¢. The estimated stock here and in the interior is placed at 18,000 bales.

Local Markets.

BAGS—The market under strong outside selling broke on last Friday to 7½ July delivery and on Monday to 7½ and 7½ June and July delivery and to 7c spot. Yesterday and to-day they were stronger. The pool are holding at prices heretofore quoted, and to get buyers discredited bad crop advices.

BARLEY—The market took quite a jump the past week on Call for futures, due to decreasing stocks, strong holdings, large consumption and poor crop prospects. The bears tried to hammer prices down at each advance and succeeded to some extent yesterday. At to-day's Call the following transactions are reported to have been made:

Morning Session: Buyer season—200 tons, 83¢; 100, 83½¢. Buyer 1888—400 tons, 94¢; 400, 93½¢; 100, 93½¢; 140, 93½¢. Afternoon Session: Spot—100 tons, 81¢ ½ cts.

BUTTER—Light receipts; up to Monday caused the market to hold strong at a slight advance, but heavy receipts on Monday and yesterday create a weaker tone, as buyers hold off and sellers are more anxious. At anything over 24c dealers will not pack, but when prices drop there is considerable packing.

CHEESE—The market continues heavy, with prices still settling under large supplies and poor demand.

EGGS—The market has fluctuated some. There are liberal supplies of Eastern on the market, which operate against prices.

FLOUR—The market has a stronger tone. It now looks as if better prices may obtain.

WHEAT—The jump in wheat futures took the bears by surprise, and many have been caught short on the market. The advance is due to poor crop prospects and very light supplies of choice grades of wheat in this State. At to-day's Call, the following are the reported sales made:

Morning Session: Buyer season—100 tons, \$1.33; 10, \$1.32; 200, \$1.32½. Buyer 1888—200 tons, \$1.45; 100, \$1.45½; 200, \$1.45½; 200, \$1.44½; 100, \$1.44½; 400, \$1.44. Afternoon Session: Buyer 1888—100 tons, \$1.44½; 200, \$1.44½ ½ cts.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to April 16, '87.	July 1 '87 to April 14, '88.
Flour, qr. sks.....	3,684,149	2,985,189
Wheat, cts.....	11,313,231	7,610,680
Barley, cts.....	2,000,554	1,973,649
Oats, cts.....	116,063	146,275
Potatoes, sks.....	721,834	954,658
Corn, sks.....	82,194	186,088
Rye, sks.....	21,497	15,968
Buckwheat, sks.....	5,865	3,054
Beans, sks.....	410,695	378,053
Bran, sks.....	382,293	410,029
Hay, tons.....	84,665	98,677
Salt, tons.....	19,273	13,390
Wool, bales.....	53,936	47,121
Hides, No.....	91,003	87,763
Raisins, 20-lb boxes.....	135,911	109,923
Quicksilver, flasks.....	15,119	25,056
Hops, bales.....	12,965	15,192

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to April 16, '87.	July 1 '87 to April 14, '88.
Flour, sks.....	134,891	275,356
Wheat, cts.....	666,437	994,685
Barley, cts.....	5,253	75
Oats, cts.....	303,016	232,180
Corn, cts.....	112,504	12,590

Bran, sks.....	27,918	54,930
Hops, bales.....	754	508
Hides, No.....	28,114	24,237
Rye, cts.....	5,154	5,154
Potatoes, sks.....	119,007	73,684

Cereals.

London mail advices to March 25 say: The weather remained very cold up till Wednesday, with further heavy snowfalls in most parts of the country, thus rendering field-work impossible. To-day, however, the weather is considerably milder, with rain. The young wheat plant is generally reported to be in a good position to withstand this severe weather, but spring field-work is getting sadly in arrear, except in some favored districts in the South of England. In France there has also been a renewal of very severe weather, further delaying spring field-work, which is now said to be nearly a month behind-hand. The winter-sown wheat continues to be favorably spoken of upon the whole. Floods and snowstorms are reported from Austria-Hungary and South Russia, doing serious local damage, and in

Germany the weather has again been very severe.

The New York Produce Exchange Reporter, just to hand, says: By Western and Southern mail we have late wheat crop advices. The change in the temperature since Monday has produced quite a change in the appearance of the growing crop; in some localities the plant is found to be seriously injured, while in others the damage is not as great as many farmers feared. The early sown wheat has not been so much injured in Ohio, Michigan and Pennsylvania as in Indiana and Illinois, but the late sown is greatly hurt, and this opinion is quite generally expressed. It is too early to give an opinion as to the extent of the damage. A considerable portion of the area sown did not come to anything, owing to the protracted drought and complete absence of moisture during the autumn. Farmers in the States of Ohio, Indiana, Illinois and Missouri are not selling their reserves which are extremely limited, and most of them are waiting to learn the extent of the damage to their growing crop. In the Spring wheat States the movement has been more liberal, and country elevators have reduced their stocks materially, though on some roads stocks are still large. More land will be put under corn and flaxseed than ever before, as they prove far more reliable and profitable crops.

A leading Chicago firm writes as follows on the wheat situation: It has been patent for some time that stocks at leading storage centers were firmly held in order to secure carrying charges, and that in many instances the inquiries by millers have been met with a demand for May prices which has impelled them to greater exertions in securing supplies from first hands, and has doubtless contributed largely to the slow decrease witnessed during the winter months. The fact that they have begun to draw supplies from visible winter wheat supplies seems to indicate that they have about exhausted mill stocks, and that supplies from other sources are unobtainable, strengthening the proposition presented in our recent letter, that reserves of winter wheat are quite small. While supplies are sufficient to meet current demands without materially trenching on in-sight stocks, small invisible reserves are ignored as a price-making factor, and are potent only when inadequate for the demand, which, in consequence, must be supplied from the visible supply. If such a condition now exists the further depression of values is unwarranted, and if next year's supplies are to be curtailed by decreased production, higher prices should obtain.

The States of Ohio, Indiana, Illinois, Iowa, Missouri, Kansas and Nebraska had on hand on March 1, 1884, 308,000,000 bu. of corn. Their crop in 1884 was 1,176,000,000 bu., and the sum of these two is their supply from March 1, 1884, to March 1, 1885, or 1,484,000,000 bu. Deducting 437,000,000 bu. remaining on March 1, 1885, we have, as entering consumption and removal in one year, 1,047,000,000 bu. In a similar way, with crop of 1,240,000,000 bu. in 1885, and holdings March 1, 1886, of 481,000,000 bu., we determine 1,196,000,000 bu. as entering consumption and removal in the succeeding year. With 344,000,000 bu. on March 1, 1887, and crop of 1,000,000,000 bu. in 1886, we ascertain consumption and removal of 1,137,000,000 bu. for another year. With 344,000,000 bu. in holding on March 1, 1887, and a crop of 780,000,000 bu. in that year, and remaining in farmers' hands 240,000,000 bu. on March 1, 1888, we have 884,000,000 bu. as another year's consumption and removal. The average of these four seasons gives, in holding March 1, 392,500,000 bu.; crop 1,049,000,000 bu., and consumption and removal, 1,066,000,000 bu. The latter has exceeded production, and the reserves, or holdings, on March 1, 1884, appear reduced 144,000,000 bu. up to March 1, 1888. Corn from the crop of 1888 will hardly be available before November, or say 8 months from March 1. On the basis of year ending March 1, 1888, we have a monthly average of over 73,000,000 bu., which would give for 8 months' consumption and removal nearly 590,000,000 bu. to be drawn from a supply of 240,000,000 bu. The above statements exhaust the old corn in the country. There will always be some in holding, and there may be some new corn used before November and these features may cancel. In the States outside of the 7 surplus States, the production in 1887 was increased but 11,000,000 bu. over 1886. I make it the consumption in the 7 surplus States has been recently, 940,000,000 bu., and removal from those States some 126,000,000 bu. annually. With a crop of 780,000,000 bu. in them in 1887, this indicates a demand within those States for 160,000,000 bu., because of under-production, against a lessening of demand from other States, from over-production, of 16,000,000 bu., or as 15 to 1.

In this crop advices are conflicting. As a rule the wheat and barley plant in Tulare, Fresno, parts of Stanislaus, Merced, San Joaquin, Sacramento and Colusa counties are sadly in want of rains. Many fields are past redemption, while many more can be made to produce half a crop with early rains, but if delayed long they will also be a failure. It is now claimed by the best informed that even with rains next week the crop will not be more than 80 per cent of what it promised a fortnight ago, and with rains deferred for a fortnight the crop will hardly go as high as 70 per cent. Many fields are being cut for hay.

The market the past week for wheat tended up in sympathy with options, which were advanced under strong buying, due to bad crop advices and the very strong probability of a war in Europe. Stocks in this city, at Port Costa and interior warehouses are light and under good control. Choice grades, suitable for milling, are very hard to get, even at an advance in bids. Trading is light in shipping grades, due to an advance in holders' views and also that the bulk of No. 1 shipping available is held against Call Board contracts.

Receipts of barley the past week were light, not enough to meet current consumption, consequently the reserve stocks had to be drawn on quite freely. The consumption of feed continues free, while brewers have been taking more liberally choice brewing even at advanced prices. The supply of choice grades of both feed and brewing is light, but large for the season of poor to fair. It is claimed that the bulk of the warehoused barley is held against Call Board sales. It is said that new barley will come in earlier than last year and perhaps than any former year.

Oats have held to steady prices throughout the past week. Choice grades are strongly held, but poorer grades favor buyers. Receipts have been fair.

Rye moves slowly, even at the lower quotations.

Fruits.

Strawberries are coming in more freely, and selling by chest. The quality shows an improvement. Gooseberries come in sparingly. Cherries have been sent in from Newcastle, but they were only sent in as samples and not for the market. A few blackberries are also said to have come to hand as samples not for the market. All kinds of berries will soon begin to come in freely.

With warm weather, there is a still continued free demand for citrus fruits, with the price of limes and lemons slightly higher. From the North a good call still obtains.

From all advices at hand, the writer is drawn to the conclusion that present prospects warrant the belief that the apricot crop will not be as light as many have claimed, owing to more bearing trees of Royals and Blenheims coming in this season. The crop will probably be about 75 per cent of last year's. The plum crop will be large, as will that of cherries. Peaches will probably be more than last year, owing to more trees bearing. Of other large fruits, not particular advices have been received.

Dried fruits are quiet but steady. The stock of choice bright sun-dried is light, and as for that, the supply of all kinds is light.

Raisins are without change. The market is quiet but firm under light supplies and strong holding. At the East the market continues to gain strength.

Feedstuff.

Bran and middlings are moving off more freely, and as receipts are only fair, the market is stronger. Ground barley is in sympathy with the cereal, which has been advanced under stronger buying. Feed corn is easier, but not quotable lower.

Notwithstanding haying is reported in some localities, yet old hay holds to strong prices, with no disposition manifested to shade prices. The dry weather and short grass are the prime factors in producing the strength of the market.

Live-Stock.

Bullocks are easier, with some shading in prices of those that cut up with wastage. Medium-sized bullocks that cut up without wastage fetch better prices than others and find a quick market at all times. Oregon advices report a weak market for range cattle. Mutton sheep are offering fairly free. The market is without change in quotations, although it is said that prices are inclined to favor buyers. Calves and lambs are weaker. Free receipts of dressed hogs caused prices to shade off some, which also unfavorably affected live hogs. The principal buying is still done by Chinamen, although fair sales are made for the block. Prices, it is claimed, are still too high to admit of packers buying. In milch cows the inquiry is slower, consequently any selling pressure would be met by lower bids. In horses a good demand is reported for all kinds, but so far as can be learned prices are about the same as heretofore reported.

Since putting the above in type, a more thorough canvass of the market shows that choice, well-conditioned bullocks are stiffer, with the tendency upward.

The market for dressed meat is quiteable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6¢ to 6½¢ per lb.; dressed 9¢ to 9½¢ per lb.; soft, 5¢ to 6¢ per lb.; dressed, 7½¢ to 8½¢ per lb. Stock hogs, 3½¢ to 5¢ per lb.

BEEF—Stall-fed, 8¢ to 8½¢ per lb.; grass-fed, extra, 7½¢ to 8¢ per lb.; first quality, 7¢ to 7½¢ per lb.; second quality, 6½¢ to 7¢ per lb.; third quality, 5¢ to 6¢ per lb.

VEAL—Choice, 9¢ to 11¢ per lb.; fair to good, 7¢ to 8¢ per lb.

MUTTON—Wethers, 7¢ to 7½¢ per lb.; ewes, 6½¢ to 7¢ per lb.; lamb-spring, 9¢ to 10¢ per lb.

Vegetables.

New potatoes are coming in freely. The quality shows quite an improvement. For good-sized, fairly-matured, there is a free demand for shipping to distant points. Considerable is going forward by rail to Chicago and distribution points west of the Missouri river. Owing to the low water in the rivers, the crop on the river lands will be large.

Cabbages continue in good request for shipping to Chicago and other Western distribution points. As the supply here is light, prices are higher.

Onions are very firm for the more choice good keepers to fill more distant orders.

The warm, forcing weather up to last Sunday brought garden truck well along, and naturally there was a decided increase in receipts, with a low range of values for several kinds. Tomatoes continue scarce and high. Cucumbers are coming in more freely, but prices shade off slowly.

Canners are packing asparagus and expect to start in on sweet peas a week from next Monday.

Miscellaneous.

Poultry ruled fairly steady throughout the week. The supply is not equal to the consumption, and consequently any glut in the market is only temporary.

In hops both the Eastern and European markets are reported about bare of choice but over-supplied with poor. In this market buyers say there are no choice straight parcels to be found. Wool comes in in a straggling way. There are no Eastern buyers here yet and few Eastern orders. All advices report the stock at the East, both in commission merchants' and manufacturers' hands, very light, but owing to the latter buying in a hand-to-mouth way prices do not appreciate. It begins to look as if at the manufacturers' meeting about a year ago they formed some kind of trust to keep prices down by not bidding against each other. In the absence of business quotations are nominal.

Quite a large consignment of Missouri river chickens came in to-day, alive, which tended to break prices on hens. Roosters and other fowls were unchanged.

Old potatoes are slow and in buyers' favor. The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	413,383	207,663
In port, disengaged.....	62,246	104,085
In port, engaged.....	10,108	10,543

Totals..... 485,737 322,291
To obtain the carrying capacity, add 60 per cent to the tonnage.

Tonnage on the way to Oregon, 22,835; tonnage at Portland, Oregon, loading and to load, 19,572. Total tonnage, 42,407.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Table with 2 columns: Item, Price. Includes Beans and Peas, Bayo, Butter, etc.

Prop. Office, 806 J St., Sacramento, Cal.

HAWLEY BROS. HARDWARE CO.

—SOLE AGENTS FOR—

THE "RELIABLE" SULKY RAKE.

The cut shows our new "RELIABLE" Rake, which has been built with a view especially to furnish a Rake which shall be superior in construction, handsome in finish, easy to operate, and very substantial. In building this Rake, nothing but first-class material and workmanship have been employed. In its vital features, as well as in its minor points, nothing has been done to avoid expense. Every piece which enters into its construction fills its especial place, because it was THE BEST OF ITS KIND which could be used. An examination of the "RELIABLE" will convince the most skeptical that it combines all the advantages we claim for it.

It is a Complete Lock-Lever Rake.

POINTS TO BE NOTED:

DOUBLE COIL SPRING STEEL TEETH.—The Teeth are made of refined cast steel, tempered in oil, and weigh 45 pounds per set of 20. Every one is tested at the factory, and is warranted. By our method of attaching these teeth they retain the highest degree of elasticity, thus enabling the rake to pass over uneven surfaces and obstructions without detriment to its work or damage to the implement.

Price, with Wood Spoke Wheels.....\$30 00
Price, with Iron Wheels, Steel Spokes..... 35 00

EACH TOOTH is fastened to the Rake Head by an independent bolt, and may be removed in less than half a minute without disturbing any other.

WROUGHT IRON TURNED SPINDLES.—The Axles are of wrought iron, and TURNED TO A BEARING where they enter the wheel hub. This feature is possessed by no other Rake, and is an especially valuable one, as it decreases the wear on both spindle and hub, and makes the Rake very light of draft.

EASE OF DUMPING AND LEVER.—The Rake Head proper, as shown in cut, sets higher than the spindle, so that the least tilting of the Lever dumps the Rake by the weight of the operator. The construction of the Lever is such that a very slight pressure of the foot on the treadle, at its lower end, will hold the teeth firmly to their work. This makes it practically a lock-lever, and gives the advantage over a lock-lever that it is not nearly so hard to dump.

SIMPLICITY AND CHEAPNESS.—The "RELIABLE" is entirely free from cog-wheels and gearing and other complicated devices for dumping or operating. It is the easiest dumped Rake made, and is so simple that any child who can drive a horse can operate it perfectly and satisfactorily.

California Maple Sugar.

A very interesting product was received at the Agricultural Laboratory of the State University last week from Placer county, in the form of maple sugar made from the sap of one of our native California maples, *Acer macrophylla*, or, as it is commonly called, the broad-leaved maple. The *Foothill Tidings* says that in spite of the declaration of old sugar-makers from the East that the trees were not sugar maples, Mr. Moulton, who lives about four miles southeast of Grass Valley, determined to try the sap and found that he could make syrup and sugar of excellent quality. Three University students—Cornelius Lakenan, Herbert Fletcher and Burton Hall—went out to the Moulton place and found that good sugar and syrup had been made by Mr. Moulton from the sap of the native maple. They secured specimens of the sugar and syrup and branches of the trees, and brought them to the University that the sugar might be chemically tested.

We had the pleasure of sampling this sugar the other day, and of seeing the leaves and bloom of the trees. The latter show that the trees are the *Acer macrophylla*, as we have stated. The sugar has the true maple flavor, grain, etc., and leaves, no doubt, of the sugar property of our native maple, if, in fact, doubt generally existed. Maple sugar has been made in this State before. We recall one case in the neighborhood of Santa Cruz a few years ago. It remains to determine how great is the yield of the native tree of certain size and whether the manufacture of the sugar and syrup can be profitably prosecuted.

Our broad-leaved maple is one of the best sidewalk and shade trees in regions where it does well. It has a wide range, too. It attains considerable size and a very beautiful and symmetrical shape. It grows very readily from the seed, which is produced in large quantities. Every spring, under the trees, on the University grounds, the young volunteer seedlings come up thick as a sowing of buckwheat, which the plants much resemble when they put forth their first pair of leaves.

We have always looked upon this maple as one of the most promising trees for timber culture planting as well as for wayside, street, or lawn shelter, or ornament. It attains size very quickly in a favorable situation, and its seedlings seem quite hardy.

In clearing up land it will be well to save the maples where their presence can be tolerated. This is already being done in some cases. The *Foothill Tidings* has heard of at least one clearer, Michael Manion, who found many maples while clearing and saved them all. "They make a beautiful shade tree, even if they should not prove to be sugar maples," said Mr. Manion. We are glad that opportunity thus offers to call more general attention to this very beautiful and useful native tree.

FINE WOOL.—We have received very handsome specimens of merino wool from the fleeces of the rams Batavia and Monroe, the animals owned by L. C. Walbridge of Russell, Kansas, which were shown on our first page in the issue of April 7. We shall be pleased to show them to any interested party who may call at our office.

RABBIT-DRIVES are so many and frequent nowadays in the Upper San Joaquin valley that we no longer try to keep track of them.

The Twin Leaf.

Many housewives who had a predilection for "roots and yarbs" in their old homes east of the Rocky mountains, will recognize the plant of which we give an engraving on this page. It is ranked as a native medicinal plant by Dr. Vasey of the Department of Agriculture, and

into two halves, giving rise to the name "twin leaf." As a whole the leaf is round-ovate in form, with the base deeply heart-shaped. When mature it may be six to nine inches in diameter. It is smooth and with the margins entire or wavy-toothed. There are three to five principal veins to each half, which proceed from the point of junction and ramify to the surface.

TWIN LEAF OR RHEUMATISM PLANT—*Jeffersonia diphylla*.

is included in an enumeration of such native plants in a recent publication by him. The common names are "twin leaf" and "rheumatism root." Its scientific name is *Jeffersonia diphylla*, the genus bearing the appellation of the distinguished statesman, Thomas Jefferson.

Twin leaf is a small herbaceous perennial, of the order *Berberidaceae*. The rhizoma or root-stalk is thick and short, emitting a mass of matted fibrous roots. From the root-stalk is sent up a number of long-stalked, erect leaves, the leaf and stalk when mature being a foot or more in length. The leaf is curiously parted

The flowers come from the root on one-flowered naked stalks (scapes), which rise nearly to the height of the leaves. The flower has about four linear-oblong sepals, which drop off upon its opening; within these are eight oblong white petals, three-fourths to one inch long, and spreading and soon falling off. There are eight stamens, one before each petal. The ovary is roundish-oval, one-celled, becoming obovate, and when ripe opening at the top by a transverse lid. This plant grows in rich, shady woods, from Western New York to Wisconsin, and sparingly southward along the Alleghany

mountains. It is most abundant in the Western States, from Ohio to Illinois and Kentucky. It has a popular reputation as a stimulant- tonic, especially for the cure of rheumatism.

Droughts That Have Occurred Before American Settlement.

In studying the records of the California missions, Hubert Howe Bancroft has brought to light the interesting fact that droughts have occurred here during the past century at comparatively regular intervals. In 1809-10 the missions and presidios suffered greatly on account of the shortness of pasturage and crops. Difficulty was experienced in obtaining food enough for the horses of the troops and mission vaqueros. In 1820-21 there was another visitation of the same kind, but more severe. The live-stock of the missions, which had increased to 400,000 head, had much difficulty in finding grass enough to keep them in a condition fit for food. Past experience had taught the missionaries the necessity of laying up grain, dried meat, fat, etc., for two years. They had also trained fishermen to furnish food from the sea, not only for use during Lent and on Fridays, but also in order that mussels and fish, so abundant on the coast, should help to economize the laid-up stores. A special dispensation was issued by Senan, the father-president, in 1823, to use meat, eggs, etc., on forbidden days, owing to the scarcity of maize and beans. But heavy rains came in 1824-25, making the season the best one known in California till 1864. Pastures and crops continued in good condition till the great drought, extending from 1828 to 1830, when there was no rain for 22 months. The wells and springs of Monterey gave out, and water for the use of families had to be brought from the Carmelo river, three miles distant. Hardly any crops were obtained; it was estimated that fully 40,000 head of horses and neat cattle perished throughout the province. Hundreds of mares were killed, and many were sold by the missions at 25 and 50 cents each. At Paraisima several large droves were driven over the cliff into the sea, so as to kill them speedily and save the pasture for the cattle and sheep. However, the grass to the north of San Juan Bautista was better than it was to the southward. In another decade the season of drought came again. In the season of 1840-41, no rain fell worth mentioning for 14 consecutive months. It was severely felt, particularly south of Soledad; but not nearly so many animals perished as in the previous dry season. This smaller loss was due in a great measure to the fact that the number of head owned by the missions had decreased in numbers greatly. Besides the large number that had died during the previous visitation by starvation, many had been destroyed afterward through neglect, by wolves, coyotes and bears, so that from 153,000, in 1830, the number of head had fallen to 20,000. The subsequent droughts fall within the period of American settlement, and it is needless to mention them.

THE BOGUS-BUTTER LAW ENFORCED.—It is telegraphed from Springfield, Ohio, that Thomas Dugan and C. A. Bird, prominent hotel proprietors, have been fined \$50 and costs each and sentenced to 10 days in jail for using oleomargarine on their tables without posting a notice in their dining-rooms.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Notes in the Mediterranean Region.

EDITORS PRESS:—Shortly after forwarding you the last communication, we left Cordova for Seville, and thence through the far-famed valley of Andalusia to Malaga, from whence we took steamer for Oran, in Algeria. At Oran we went by rail to Algiers. From Algiers we came to Marseilles and from Marseilles by rail to Nice and the "Riviera."

The valley of Andalusia is composed almost entirely of redland, which is generally of a gravelly nature.

Rocks and even small stones have been carefully gathered from the land out of which fences and plastered walls have been made. No wooden or wire fences are to be seen.

Tillage appears to be a laborious grubbing process rather than the systematized mode of implement labor as practiced in California. The old-fashioned wooden plow mentioned in my last letter appears to be the mainstay, and with the exception of an occasional harrow it would seem that no other implements are used. There are, of course, a few proprietors who indulge in the luxury of a Swedish or even an English plow and cultivator, but these compose an infinitesimal number.

Plows and Plowing.

I found, however, that the orchards of Andalusia were well and thoroughly cultivated. I could find no hardpan underneath the plow-point level, and the soil is thoroughly mixed and fine. The effect of this thorough tillage is mainly due to the efficient and laborious hand labor. The ground between the trees and vines is most generally hoed by hand, and often crops of beans are raised between them. From observation in the field, I am inclined to think that there is one element in the old-fashioned wooden plow that might be introduced in the modern ones, and that is to have the plow constructed to ride on the "nose" in place of the almost triangular base line common to all modern plows.

The "surface" execution of the modern plows is far more effective and conducive to good tillage than is that of the old-fashioned wooden plow, for the modern plow cuts evenly, and turns weeds and soil, which things cannot be done by the old wood plow, but when the "under surface" is examined it will be found that the triangular base line of the modern plows scrapes over, or as Gen. Bidwell calls it, "trowels" over the under surface—the same as a plasterer runs his trowel over moist plaster, thereby closing up the pores of the under surface, causing a hardpan to follow. The hardpan in time renders the land sterile. This defect has, to some extent, been remedied by the Swedish plow, in which the "nose" is an inch or more lower than the mold-board, but in this plow the mold-board is not constructed to turn soil and weeds as thoroughly as in the American plow. Our thoughtful farmers, implement manufacturers, and inventors, have in this a fruitful and, perhaps, profitable field of practical work before them, and it may be hoped that in the near future a plow will be produced that will do equally as good surface work as is now done by the best make plows, but at the same time obviate entirely the tendency to create hardpans.

The Algaroba.

Inclosed I send you leaves and a pod of the Algaroba tree. It is grown quite extensively in Andalusia, makes a fine shade tree, is evidently an evergreen, and the crop, consisting of pods about three times the size of the sample, makes excellent food for cattle and horses. [This is the carob tree which has already been introduced in California by the University and by individuals, and succeeds admirably here.—EDS. PRESS.]

The great and glaring defect in Spain is the absence of forests. Trees will grow and thrive there, as is shown by the thriving condition of the trees planted by order of the Duke of Wellington on the hills of Granada near the Alhambra. The people of France evidently understand and appreciate the value of forestry and its relation to agriculture, for the hills and mountains are covered with growing and thriving forests, and laws are strictly enforced for their preservation.

A large portion of Andalusia is given over to sheep pasturing and cattle raising, and from what I have seen of it, I feel that it is safe to say that California has not alone a valley of like extent and richness within her borders, but that she has a half-dozen of them, and has besides, a better climate.

Value of Climate—The Riviera.

Many Californians too are in the habit of sneering at climate, as if climate had no value. They would change their mind—and that quickly—if they attempted to buy a 160 acre ranch or even a town site in the "Riviera." Not that the land is so fruitful here; on the contrary, from Marseilles to Monaco almost every acre of tillable land was, as it were, manufactured artificially. The original owners evidently took a barren, craggy hill, and after blasting or shattering the rocks they made shelves or terraces, and on these shelves or ter-

aces they must have deposited the earth that is to be seen there.

Many of these "home-made" ranches are no larger than an average back yard in Sacramento. Just try to buy one and you will hold your breath at the price. You will be reminded—should the price seem outrageously high—that this is "The Riviera." What about the Riviera? Well, nothing more than this: It is reputed to have the mildest winter climate in Europe. Now mark you, they have the mildest winter climate in Europe. Well, California has the finest winter climate in America, and in addition to this it can furnish on the same spot the finest summer climate also.

Happy the poor man that secures a home in God's favored land now. No time should be lost in securing it, for the time will shortly arrive when homes will be as expensive as in "The Riviera." Not alone is California destined to become the home of millions, but even the despised desert lands of Arizona will shortly begin to show their real value. The Riviera may have the mildest winter climate in Europe, but it cannot begin to "hold a candle" to Fort Yuma. I was in Yuma in January and found the air like that of mid-May in the East, whereas here on April 1st it is decidedly winterish in the shade, and the few orange and lemon trees here look as if they could not make up their mind what to do—whether to live or die, so they keep up a kind of average. They are all but dead, and the numerous undergrown lemons and oranges on them show clearly that they are not grown for profit, but as a blind—that this is a citrus belt, as it were.

I was in hopes that I would have reached Spain in time to have sent cuttings home, and in fact promised Mr. Platt of W. & R. Strong & Co. some. Unfortunately the steamer I intended taking at Havana for Southern Spain had gone, so I was obliged to take one for Northern Spain instead, which brought me to Andalusia after pruning-time and too late for cuttings.

In Africa.

Algeria is a very important colony to France. From Oran to Algeria, a distance of nearly 250 miles, there was almost an unbroken array of vineyards and orchards. The color and texture of soil there resembles that of Andalusia, and may be found to correspond to the foothill lands of Placer and El Dorado counties.

The African, Spanish and French lands bordering the Mediterranean are almost altogether composed of redlands. The Algerian vineyards appear to compensate the French people somewhat for the losses the phylloxera has caused them in France, and for aught we know the vin du France comes from Africa. Why not? Who knows?

This reminds me of a story (chestnut). Several years ago the writer was in the private office of a banker in San Francisco, noted principally for his millions and his bluntness. Observing some bottles of wine in a corner, a would-be "connoisseur" remarked:

"Rare wine that, is it not?"

"So so," replied the banker. "You can taste it."

The "connoisseur" hastened to "taste." Filling a glass full, he held it to the light, looked at it critically one way, then another, sipped it, smacked his lips, looked again, sipped again and exclaimed: "Very rare indeed; delicious, superb."

"Bosh!" said the banker. "I paid 75 cents a gallon for it at Kohler's; it is for my servants." How many drinkers, think you, "sip" and "look" and "smack" their lips at "Chateau la Rose" or "Chateau la Fete" at \$2.50 per bottle that comes from Algeria?

If we must drink wine, why can we not have sense and drink California pure and straight at 50 or 75 cents a gallon? In two things the people of Southern Europe have an advantage over us. Firstly, they appear to be better merchants. They know how to interest some titled bilks who do the "lip-smacking" and the "looking" and the "tasting" of their wines, and then their wines are "famous." Secondly, they have an unlimited supply of shipping to reach our market whereby they can land green fruits (especially grapes) at 60 cents per 100; whereas we have neither the titled bilks (and we don't want them) to give "character" to our wines nor have we transportation facilities to compete with them. Our misfortune, although of a temporary nature, is yet a real hindrance to our progress. "Let the traffic stand all it can bear" is the rule of the chief arbiter of the present "cock of the walk."

Do they not know that by transporting green fruits East at the lowest rates it would tend to bring hither a large and desirable population, enhance the value of real property, accomplishing the very ends hoped for?

They must surely know that. Then why do not the managers of the Central Pacific Railroad Co. grant these reductions? Can it be other than that they fear if prosperity came it would bring new roads, hence competition to them?

It can only be this and nothing else that prevents them from giving the fruit growers the rate they should have in order to compete with the Mediterranean growers, but California will advance in spite of them. O her roads will come and then they will come down. Nice, Italy, April 1st. D. LUBIN.

QUICK WORK.—In Augusta, Ga., a tree felled in early morning was before nightfall of the same day converted into paper and sent out bearing the current news.

THE ORNITHOLOGIST.

Useful Birds.

We have never listened to the complaints of farmers and fruit-growers about the depredations of the Baltimore oriole, the cat-bird, cedar-bird and many others, without feeling convinced that the complainants make themselves guilty of the basest ingratitude. (1) Without the assistance of these friendly birds in our warfare against injurious insects, all our efforts to raise good fruit would soon end in failure; (2) and if the birds take a small share of the fruits we do raise, they take no more than they are justly entitled to. In fact, we believe that it would not only be proper, but also decidedly profitable, for every farmer and gardener to plant some cherry, mulberry or mountain-ash trees, and a grapevine or two, in a spot most convenient for the birds, and chiefly for their benefit. Call the birds to your place of feeding them, and by providing them with nests where they may breed in security. (3) Fruit is so cheaply and easily grown that one should not begrudge to our little feathered friends what little they need and desire for their own use. It is giving them only a rather inadequate pay for their effective work. (4) The purple martin eats rose-bugs, and even potato-bugs. (5) The cedar-bird eats elm-beetles, besides lots of other injurious insects, and does not object to a dessert of cherries, which he richly deserves. (6) The oriole is fond of tent-caterpillars, fall web-worms, etc., and devours them by thousands. This is heavy food, and some grape juice may be required to aid in its proper digestion. (7) The cat-bird eats pear-slugs. The robin, the brown thrush, bluebird, wren, woodpecker, jay, chickadee—all these do a vast amount of good to the fruit-grower. (8) Some grape-growers complain especially of the oriole, which sometimes punctures grapes. We would not kill an oriole for five times the amount of grapes that it may injure. We hope our readers will endorse our views on this question and protect these birds, provide them with breeding-places and with feed, that is so easily produced for them. The house cat is one of their most destructive enemies, and should be watched and restricted.

EDITORS PRESS:—We find the above as an editorial in a prominent Eastern exchange. It is a fair sample of what men write on subjects they know little or nothing about.

Let us look into the facts a little and see how near this editor is right. To save space and repetition we have numbered the assertions made that do not agree with the facts as we have observed them.

1. Birds do not, as a very general rule, feed upon and therefore destroy what are generally known as injurious insects. This is readily proven by asking what birds are known to feed upon, to any extent, the most noxious insects, those known to be most injurious to our crops and fruits? What birds feed upon the Colorado potato beetle, chinch bug, codlin moth, plum curculio, scale bug, leaf lice, root lice, canker worm, wood and root borers of our fruit trees, the Hessian fly? In fact we may go on and name nearly every insect injurious to man, his crops, fruits and animals. And if we look into the facts carefully we will find that the birds are very careful to let these insects alone. There are very few of them that birds can feed upon at all. Why? Because the majority of them are poisonous to the birds, and the birds know it. Others are so distasteful, so acrid, so blistering (like the cantharidaceae), so incased in shells as to have no temptation for the birds, or are so hidden away that they cannot reach them. And exactly these are the reasons why these insects are noxious, for if they had no natural defenses of the kinds named, and were good and acceptable food to all birds alike at all times, then the birds would soon make way with them, and the birds in the mean time would increase very fast, only to starve themselves, perhaps, when this food was destroyed.

No, it is not true that the birds do destroy and hold in check any of our best-known noxious insects. But it is true, perhaps, that the birds do feed upon and hold in check a few insects that would become noxious if the birds did not feed on them, but even this point needs much more careful study.

The great enemy of insect life is other insects; if it was not for insects preying upon and destroying each other the world would soon be in a sad condition indeed. Many of our most noxious insects are held in check by other insects feeding on them. Others, some of them very injurious, are nearly completely defended against all enemies in the shape of other life. As an example, the well-known chinch bug may be named. It, so far as we know, has but two enemies, namely, weather unsuited to it and contagious disease, and it is not often that the conditions are right for these to destroy it; therefore it breeds, prospers and becomes fearfully destructive. Its particular protection, a very acrid taste and very disagreeable smell, protects it from, we may say, all living enemies. The same is true in a great measure of the great family of true bugs (hemiptera) to which it belongs, such as bedbugs, squash bugs, plant bugs, etc.

2. The birds, if let alone and protected, are very liable to take a good deal more than a small share of the fruit. In fact, with a very little protection they would soon take it all. The writer many years ago was a great lover of birds, and held very much the views that this editor writes. He planted a large orchard of cherries—2000 trees for the birds and 2000 for his own use; or, in other words, planted so great a number of trees that he thought the birds could have no effect on them. The result was that he soon found that the more trees and fruit, the more birds. Perhaps this was owing

to the peculiar environment of this orchard, but he found that unless he protected this great orchard of cherries from one particular bird, the cedar-bird or "wax-wing," they would have taken every cherry. They came in myriads, attracted by some peculiar instinct known only to feral life. Other fruit-eating birds seemed to gather in to feast in this great orchard proportionally as they did in smaller ones.

3. Yes; fruit is easily and cheaply grown in some places, and it is often the case that in those same places the birds find it to be very convenient to be around when it is ripe and "gobble" or ruin the whole thing. We have known of many cases where men were forced to abandon fruit culture where all else was quite perfect except that the birds would eat or destroy the fruit as fast as it ripened.

4. The purple martin eats no rose bugs (beetles) or potato bugs (beetles). It fact it, nor none of the family to which it belongs, the Swifts, which includes the martins, swifts and swallows, though they feed entirely, we think, on insects, eat none except such as they catch on the wing.

It is a fact, that so far as we can learn, one species of this very common family has never been seen to alight except within its natural home—a chimney or hollow tree. We refer to the well-known chimney-swallow or swift.

None of this family, as far as observed, ever take food except when flying, and the insect also in flight. When our astute editor sees a swift of any species gathering "bugs" and worms off of the ground and plants he should call in some competent naturalist so that a strange fact in natural history may be duly recorded.

And right here comes in a question of fact of great importance. The food of these aerial-feeding birds has never been fully investigated, and it is a question whether this same Swift family are not very injurious instead of beneficial. We know that their food is entirely insectivorous, but what kind of insects? That is the question. As before stated, our very best friends in holding in check noxious insects are other insects; many of these are small ichneumon gnats and flies, parasitic on other insects. These are destroyed, there is no doubt, in myriads by the swifts during the mating flight of the gnats. It is also true that the swifts and other aerial-feeding birds may destroy also many noxious gnats, such as mosquitoes, gall gnats, etc. The bee-martin and even the red-head woodpecker take their food usually on the wing.

5. Neither does the cedar-bird eat elm beetles or any other beetles or insects in its adult state. Its food, so far as observed, is entirely fruit, and fruit alone. Fruit, as the term is commonly used, as it does not even accept as food what we term seeds; or at least competent naturalists have not recorded such facts, and the writer has examined hundreds of specimens and never found anything in their viscera except the pulp of fruits.

6. Nor is the oriole "fond of tent-caterpillars, fall web-worms, etc., and destroys them by the thousand." And here is a chance for a most valuable lesson. Some one told the late Benj. D. Walsh of Illinois, America's first great practical entomologist, that he had seen the oriole feeding on the tent-caterpillar. O. D. Ben was too good a naturalist to believe any such stuff, and determined to investigate the matter. He found that the oriole did visit the nests of this caterpillar, each time carrying away a worm, but he noticed that the oriole alighted, tore open the worm, and left the carcass uneaten; investigation proved that each worm the bird carried off had been parasitized, and the oriole was after the nice white, fat grub inside the caterpillar; by this destroying and holding in check the parasite that would have kept the noxious tent-caterpillar within bounds. The oriole, or Baltimore oriole we suppose is meant, also known as hang-bird or hanging-bird, is so numerous in many places East as to render it useless to try to grow grapes for market.

7. The cat-bird may possibly eat pear-slugs, but we guess not; at least he would probably be very hungry before accepting so disgusting a grub. The cat-bird is the most injurious bird to the fruit-grower of all in the Mississippi valley, and is of no practical benefit whatever. The robin is about neutral. The wren, bluebird, chickadee, and many other small birds, may be called beneficial only from the reason so far as known they do no harm. Many of the small birds are lively, pretty creatures; they delight us with their sweet music and pretty colors, the great mass of them do us no harm, a very few of them may do us great good, therefore they should be allowed to live. There is exactly enough of them, none too few, none too many; possibly if even the seemingly most innocent species of them should greatly increase in numbers they might prove very noxious. As an instance, the terribly injurious rice bird or bobolink of the south Atlantic coast, where it renders the great industry of rice-growing unprofitable, is known in the north in summer as an innocent, welcome bird. But on its southward immigration in autumn, it attacks the rice-fields in countless millions, and sweeps many fields clean of nearly their entire crop.

8. We hope our readers will not adopt the views of this Eastern editor, but will manfully protect their crops and fruits from all destroyers if possible, be they birds, bugs or beetles or what not. Don't be afraid of destroying the equilibrium of nature by killing a few birds that are eating up your substance, the results of your toil and capital, but use judgment in ac-

cordance with these lessons and be careful what you do kill. Be sure you are right, then go ahead. But take no life unless you know it to be noxious. Kill no innocent birds, lizards, toads, frogs, snakes, hawks, owls, buzzards, nothing, take no life unless you are positive it is worth more to you and the world dead than alive. And give up, now and forever, the false idea that the safety of the world from being destroyed by noxious insects is dependent upon the birds. It is safe to say that if every bird on the face of the earth was destroyed to-day, the world after a brief commotion, or irruption, with perhaps some loss, would move on as well without as with the birds. But this is no excuse for the wanton destruction of birds or any other life. D. B. W.

San Francisco, April 20th.

HORTICULTURE.

The Future of California Citrus Fruits.

[Essay read at the Santa Barbara Convention by DR. O. P. CHUBB of Orange.]

The rapidity with which California citrus fruits have, within the past five years, gained a foothold in Eastern markets has greatly surprised not only Florida growers, but importers from the Mediterranean. That oranges, lemons and limes were produced on this coast had, of course, long been known, but active competition in quantity throughout the States east of the Rockies was neither suspected nor feared.

Florida, however, cannot be materially affected by the increasing importance of our trade, since her output is nearly or quite consumed before ours is sufficiently mature to take its place. The only point of contest at issue between these two sister States in the citrus trade seems to be one of quality and beauty, or, in other words, a matter of "points," concerning which a committee expressed an opinion at New Orleans not long since. The Atlantic cities appreciate fine fruits, and in this respect there is an opening for our growers to meet Florida in her own chosen markets, and before her season closes. The lateness of California's main crop is her strong hold in those cities west of the Atlantic seaboard. This climatic advantage is an important one, and should be well considered in the selection of varieties for planting, since the later the shipments are made the better the prices obtained (at least such has been the case in past seasons) up to the middle of July, when strawberries and other small summer fruits interfere. The great Northwest is, however, capable of absorbing our entire product at remunerative prices, as early, or late, as it is in fair or fit condition to place. The States west of New York and Pennsylvania are depending more and more each year on California for spring shipments of oranges, and the heavier consumption is steadily pushing westward. The people there are all interested in California and her fruit products, and will choose her oranges in preference to Mediterranean fruit of like quality and price.

Varieties.

By intelligent propagation of imported varieties and stocks, aided by peculiar adaptation of climate, soil, and methods of cultivation, our horticulturists have developed new types of flavor, pulp and peel, which Western taste is not slow to recognize and appreciate. The Washington Navel stands to-day the peer of any orange known in the market, and is really the autocrat of the price list. Following this winner of gold medals and golden opinions come the luscious St. Michael, the sprightly Mediterranean Sweet, the handsome and characteristic Valencia, and late and various improved selections from the older orchards of seedlings, not to mention the average seedling, of a quality equal to anything grown on the coast or islands of the Mediterranean.

Hygienic.

All these varieties, as the product of California soil and climate, possess that happy combination of sugar and acid, of flavor and aroma, which not only pleases the palate but corrects the bile of the Eastern consumer as he emerges from the ruins of a supertonic winter into the malarious tendencies of a radical spring warmth mixed with the vagaries of an obstinate liver.

And so he comes to recognize the California orange as not only the proper thing, but as coming in at the proper time, and he proceeds to put it where it will do the most good. It is a new and popular prescription from Nature's California laboratory, and he cries for it daily. The great and growing cities of the Mississippi valley are learning to appreciate and consume increasing quantities of this class of fruits, filling the gap as they do between the ham fat of winter and the chicken broth and fresh vegetables of the heated term in July.

The Markets.

Chicago alone marketed 500 carloads of oranges for us in 1887, but our best markets are coming still nearer the source of supply. Not long will St. Paul, Minneapolis, Sioux City and Omaha, St. Louis and Kansas City, Denver and Pueblo, Salt Lake and Helena depend on New York or even Chicago for their supply of citrus fruits. With additional competing lines of railroad, speed and efficiency become important factors; low rates and prompt delivery are then subjects of vital interest to common carriers of perishable commodities. "From the orchard to the fruit-stand in five days" will constitute the banner of the train, and contracts to deliver at speci-

fied dates may yet solve the problem of shrinkage and fluctuating prices. Bright, clean fruit and systematic handling are only requisite to insure a steady demand and profitable returns for all the oranges and lemons we can grow.

Lemons.

Our lemons do not, as yet, compete as successfully with the foreign product as our oranges have done, but the cause lies, in my opinion, wholly with us in our imperfect methods of curing and handling. I have seen California lemons selling at \$10 a box in the city of Omaha for short periods, but only because the foreign stock was entirely exhausted. Such as were still undecayed were repacked in foreign boxes and sold at the above-named price with no suspicion on the part of the retailers and consumers of the fraud practiced.

During the past winter good prices for our oranges have been steadily maintained, and I have been besieged with personal letters from dealers in Cleveland, Cincinnati, St. Louis, Omaha and other Western cities, asking for shipments, or consignments on commission, and promising returns at from two and a half for fair seedlings to six dollars per box for choice Riverside Washington Navels. But the day is past when fine clean fruit, in good condition, need be risked with commission houses. All that we have to do in placing ourselves upon a permanent basis of prosperity in the citrus fruit trade is to grow good, clean fruit, improve our methods of curing and handling, systematize the transfer and distribution of the crop, and pocket the cash at "free on board" rates.

The Northwestern States and Territories will take care of it all, leaving the Atlantic Coast to be supplied with Mediterranean and Florida stock, excepting when fancy prices for our fancy fruit may warrant a longer haul at a better profit.

Under a perfected system of cold storage and the use of refrigerator cars, such results may be definitely secured as to give us the choice of markets, according to any special demand of the season or locality. This industry is yet in its infancy on this coast, and we may rest assured that the demand for choice fruit at high prices will always remain in advance of the supply.

Apple Culture.

[Essay read at Santa Barbara Convention by O. N. CADWELL, Carpinteria.]

The apple is monarch of fruits for the temperate zone. Much is expected of the apple, and no fruit responds more bountifully for labor bestowed upon its culture. I believe the apple has a bright future even in Southern California. If I were about planting trees for profit, apples would come first, and more of them.

As to varieties, let us see what kinds do the best in our vicinity. Many varieties that do well further north may fail in some respects here. Here the yellow bellflower excels. You may start at the northeast corner of Maine and look carefully all the way to the Pacific, you can find no bellflowers more luscious or beautiful than those grown here. I have seen many of other varieties just as good as need be grown anywhere.

We can select varieties that do well here that will give us apples from July to April. Every owner of a few rods of land for a home should raise at least apples for the family. If your room is limited, do not let the ornamental crowd out the useful. A nice apple tree is very pretty, and none more useful.

Red Astrachan comes first for early, giving fruit every year and a good grower.

Yellow Harvest is of better quality and a little later.

Fall Pippin is a splendid apple for the family.

Yellow bellflower and White Winter Pearmain, with those already mentioned, make up a good variety for home use. More apples and less pork brings more health and pleasure for the children.

For the market there is such a thing as having too many early apples at one time in the season with the rush of other fruits, but as yet we have not been able to supply the market for late-keeping apples; some other place has furnished the apples and taken the money. With proper care and selection of varieties we can raise the apples and keep our money at home.

Planting, Pruning, Etc.

Be sure you have good trees with strong clean roots to begin with.

For a family orchard, trees of three years or more growth can be safely moved and have fruit right along.

For the orchard, good strong trees one year from bud or graft is best. Twenty to twenty-five feet each way is near enough to plant, and often thirty feet or more is better.

Be careful not to set your trees too deep.

As to pruning, I have no arbitrary rules except I want my trees branched near the ground. After planting, cut your trees off 20 inches to 2 feet above the ground. Use your judgment about the number of branches to let grow, but keep the tree well balanced so as not to grow too much one-sided. Cut back enough to keep the branches strong and trust a good deal to nature to make a good tree after getting a start in the way a tree should grow. If you are going to put a two-story top on your tree, do so at once, or as soon as the body will be strong enough to carry it. Cut the branches well back, or the first heavy crop of fruit will either break or bend the branches down all around the body of your beautiful tree.

A low-branched, well-formed tree will hold twice the fruit of the high-branched ones of the same age. After a few years some tire of cultivating the low-branched trees and go to work and prune off all of the lower branches, leaving a tuft of twigs at the top. That tree is a ruin, as there never can be a good head formed after such work. The little that may set on the little top will either bend down or break off. That pruner has been at least twice successful; he can plow up to his tree which is ruined.

Renewing Orchards.

I favor thinning the fruit to cutting back the wood enough to hold it. Give plenty of room, as the best of fruit cannot be grown on crowded trees.

Young trees produce the best fruit, so it will pay to have more planted to take the place of those first planted 16 to 20 years ago.

The old trees have done well. Many of them have been ill-treated, cut and slashed, allowed to break down with their heavy loads, so the apple crop will grow less until young trees can be brought to work.

If we will properly use our experience with our old trees which have served us so well, we can select varieties that will find a paying market, and not have to lie on the ground to rot during the rush of other fruits.

Seedling Apples.

I must say a few words in favor of some of the seedling apples I have grown in this county. The largest, the tastiest, the sweetest, the best, and the most beautiful apples I had were among my seedlings. Unfortunately they come and go with the rush of fruits, so there has not been much account made of them.

Some of the seedlings began to fruit four years from the seed. The seedling apples remind me of the good apples that used to grow in New York State and Michigan.

It has been said we cannot raise good apples. I claim we can, and every year. After some of our visitors from the famed apple-growing country of the East have started in among our apricots and tasted all the way along through pear, peach and nectarine, through the vineyard of luscious varieties of grapes, to the apple orchard, I claim some of them are not in a fit condition to act as judges of the flavor of our apples.

One more reason our apples get a bad reputation, that when most of our visitors and tourists are here our apples are old and have lost their best flavor. Apples have their season and must be tested then, to judge rightly of them.

Notwithstanding the adverse criticism our apples may have, we can raise good ones, plenty of them, and every year. As yet but little has been done that may be done in apple culture in Southern California.

Pruning Citrus Trees.

[Essay read at Santa Barbara Convention by J. W. SALLIE of Pomona.]

In the matter of pruning trees, as in all other matters of horticulture, there are fundamental principles of nature underlying all methods, and the nearer the method corresponds with the fundamental principles the better the method. Then the first thing to learn in pruning any kind of a tree is to know the nature of the growth of the tree, and the second thing to know is the object for which you prune.

The orange tree is a native of a tropical country, with abundant rainfall. The foliage is very dense, thoroughly protecting the body of the tree and ground beneath the branches from the sun's rays; hence the roots grow near the surface of the ground. It is therefore a great wrong to expose the tree trunk or ground around the same to the scorching rays of a noonday sun.

To secure a good stock to begin with, the seedling should be four years old before the bud is inserted. The seedling stock should be well cultivated, irrigated and manured, so the growth is vigorous. No pruning should be done to the seedling stock, for the growth of both top and root depends upon the healthy condition of both, and the more abundant the foliage the better. If it grows scraggy, let it grow.

If a seedling tree is desired, cut the top and branches from the seedling stock the winter after the fourth year's growth; allow but one bud to grow the following season. This will grow six or eight feet high—straight and beautiful. Transplant the following season, i. e., when the root is five years old.

If a budded tree is desired, bud into the best portion of the seedling stock the fall after the fourth year's growth, and cut all the seedling stock away to within six inches of the bud. Allow no other bud to grow save the one inserted, and in one season this will grow five or seven feet high. Transplant when this bud is one year old. Drive a stake by the tree and tie the tree to the stake; that is, if the tree is crooked or too slim to support itself erect. The same instructions for pruning apply to both seedling and budded trees. We have now a beautiful, tall, straight stock to build a tree upon. This straight stock is very important, for without it we cannot make a handsome and symmetrical tree.

If the bud is put into a seedling stock only two or three years old, we will not get a handsome stock to build a tree upon; it will be low and scrubby and is difficult to prune properly. But in any case, observe the following

Rules for Pruning Young Trees:

Allow the branches all to grow unmolested

for three years, at least. Do not pull buds which come from the tree above the union of bud and stock. Below this suckers should be removed. The better way, however, is to wrap paper around the tree from the ground up about eight inches. Do this when the tree is first set in orchard. This prevents the suckers and unnecessary buds from growing, and also protects the tree trunk from the sun and from gophers and rabbits.

If you desire your trees to form a head about three or four feet high—which, however, I do not recommend—you should not pull or break off the young shoots which will grow thick all along the tree trunk from the paper to the top of the young tree, but allow them to grow until the foliage thoroughly protects the body of the tree, say let these branches grow to be about two feet long—then cut off the ends of these low branches, and cut repeatedly as they grow—but at no time cut them away so the body of the tree is exposed to sun. Remember, too, that the more foliage you have on the tree the better will be the growth. If you want to spoil and dwarf your tree, just keep these low branches trimmed off to the height you want the top or head of the tree. Your tree will not grow at all—or but little—for several years, and while your neighbor, who allowed his trees to have their free will in growing, has been getting profits from his orchard, you will still be trying to make your trees grow as nature never intended them to grow.

I much prefer the branches to put out near the ground—say about eight inches above—and from that height to the top of the tree the branches should put out at regular intervals from the trunk. The lowest branches will drop to the ground the first season. They will be the first branches to bear fruit and will bear two or three crops before nature is through with them. These low branches will not grow much after the second or third year, but the growth will be upon branches higher, which, like the first, will droop and overshadow the lower or first branches. This will be about the third year; then is the time to begin the use of the shears.

Cut away such branches from the bottom and inside of the tree-top as nature seems to be through with, and which do not appear to be vigorous, and are useless in affording either fruit or protection to the tree. It will not require an expert to discover which they are. But in no case cut away a vigorous branch just to make the tree look pretty, or to make the top high enough to plow under.

As the tree grows older, these same instructions should be observed. As the tree grows taller and larger, and the towering branches overshadow and dwarf the lower ones, and as these lower ones cease to bear fruit, they may be thinned out. Take a principal branch, for instance, and follow it outward from the trunk, and you will find many small laterals which nature seems trying to choke to death. These are the first members of this principal branch, and in their time bore the fruit and foliage, but now have been superseded by larger and more vigorous ones—and these old ones should now be cut away—but at no time thin the body of foliage so that an open window is left that the sun may shine through upon the inner branches or trunk of the tree.

The tree, when well trimmed, if 10 or 12 years old, should present the appearance of an umbrella. The inside branches and trunk of tree, clean and smooth, with a dense foliage on extremities, and the top should come within three or four feet of the ground. But to let the top at all times rest upon the ground is a better way to secure a large amount of fruit, and then, too, no props are necessary, as each branch touches and rests upon the lower one, and the lowest rests upon the ground.

In this case the ground never becomes foul or hard under the tree. I like this method best. However, the inside trimming should be done as above described.

Never should there be pruning done known as "heading in," unless it is with lemons. This method is sometimes necessary with lemon trees, as they grow much more rapidly and branches longer than orange trees do, and in order to have them grow stronger we sometimes "head them in." The same general instructions apply to lemon trees as to orange trees. Remember at all times to be sparing with the shears.

You are sure to dwarf the young trees by too much pruning. If you expose the trunk of a young citrus tree to the sun, the first thing nature will do is to attempt to cover it again, and as often as you remove this covering you injure the tree. And so likewise when you thin the top of the old tree to excess.

The advantages of low pruning are these:

First, the growth is much more vigorous and healthy.

Second, the tree will bear much earlier and more fruit.

Third, the fruit is much more easily and cheaply gathered.

Fourth, the tree is better balanced and grows straighter.

Fifth, the pruning is more easily and cheaply done.

Sixth, the wind will have less effect on both tree and fruit.

Seventh, the body of the tree is protected from sun and kept free from disease.

Eighth, the ground beneath and around the tree is protected from sun and not so apt to form hardpan in cultivation.

Finally, it is nature's plan, and you cannot depart from it without injury or loss.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Interstate Commerce.

It is stated on the authority of Chairman Cooley that the Interstate Commerce Commission has recommended to the Congressional Committee on Interstate Commerce an amendment to the Act to cover the transcontinental competition of Canadian roads. The principal feature is that no U. S. railroad shall charge more for local freight than their share of rates charged on the Canadian freight they have received. The commission has also made suggestions looking toward the control of express companies, pipe lines, and other forms of special service.

Representative Amos Cummings of New York has introduced two amendments to the Interstate Commerce bill. One provides that all contracts between a railroad and others for freight or passenger traffic shall be public; the second prohibits all such transportation in bond through Canadian territory as now takes place between San Francisco and Eastern cities by way of the Canadian Pacific.

Indorsing the Governor.

At the Grange reunion held last week at Enterprise hall, large delegations being present from Elk Grove, Florin, American River and Sacramento Granges, the following preamble and resolutions were introduced by the County Lecturer and adopted without a dissenting vote:

WHEREAS, Governor B. F. Waterman has, through his letter directing the Warden and Directors of the State Prison, shown that he is opposed to monopolies, and further, that he is the friend of agriculture, by requesting said Warden and Board of Directors to give the preference to orders for grain-sacks coming from farmers; therefore be it

Resolved, That we, the farmers of Sacramento county, assembled at Enterprise hall on this, the 20th day of April, 1888, do indorse the action of Governor Waterman upon this question. We therefore recommend to the farmers that they give their orders for grain-sacks to the State Prison authorities, and thus show by our action that we appreciate his efforts to help us to obtain cheap sacks.

Bait for Gudgeons.

The San Bernardino *Index* exposes another of that class which gains a livelihood from others without returning value received. The individual is named David Corrigan, and the game he works is very smooth, often catching the most cautious citizen. Corrigan is crippled in one of his legs, is a typical tramp in appearance, has a keen eye, and is evidently a good judge of human nature. His is the diamond-ring trick. He will be walking along the road when some one is approaching; he suddenly makes a dive into the dust and picks up something. He blows at it, holds it up to the sun, and scrutinizes it closely until the party or parties reach him. It is a ring. They all take a look at it. It is a gold ring with a diamond setting, apparently worth \$75 or \$100. He doesn't want it. He's a tramp. What will they give for it? To one not properly on it, it might be taken for a sure-enough stone. Nine times out of ten he produces \$10 or \$20 and moves on, believing that he has struck something pretty fine through a measly old tramp. When he discovers his mistake he goes out into his back yard and gets an able-bodied man to exercise his leg-power on him.

When Sheriff Cole saw him at Old Town yesterday he recognized him and concluded to take him in. He held his hands heavenward, and the sheriff went through him. All kinds of traps and calamities were found upon him, together with nearly \$400 in coin and certified checks. Then there were two dozen of the alleged diamond rings, besides a little memorandum-book, which contained an account of his "catches" since 1885. It is itemized in good form, and shows that Corrigan has been roping in suckers all along the coast, and that his earnings were from \$100 to \$400 per month. * * *

It looks as though the oily Mr. Corrigan will have some difficulty in explaining why he should not be sent up for obtaining money under false pretenses.

CONTRA COSTA COUNTY Grange Picnic will be held on the first Saturday in May, place as yet not fixed. Committee will determine during the coming week. It will, no doubt, be at the San Ramon valley.

Grange Work and Progress.

[By Mortimer Whitehead, Lecturer National Grange.]

The pages of the *Congressional Record* must be interesting reading these days to members of the Grange. The measures the Order is advocating, and the letters, memorials and petitions of members of the National, State, County and Subordinate Granges in support of the same, occupy whole pages, and hardly a day passes now but something relating to farmers comes up in Congress.

The fractional silver-certificate bill, which has passed the House by a vote of 177 to 67, was in answer to a call from the organized farmers.

The reduction of postage on seeds, plants, cuttings, etc., from 16 to 4 cents per pound, is now almost sure of success, and united farmers have brought it to the front.

Fractional Currency.

As many farmers and Patrons do not see the official reports of Congress, a few extracts from the *Congressional Record* will give some idea of how the farmers are being heard from.

On the fractional currency bill:

Nelson Dingley, Jr., of Maine:—The large number of letters and memorials from Granges, farmers and residents of rural communities asking for this bill, attest not only to the existence of a wide demand, but also a conviction, wide and deep, that it is the duty of the Government to meet this want. The money-order and postal-note, inconvenient and expensive for small sums, can be obtained only at one out of eight postoffices in the country. I hope this bill will receive the necessary two-thirds vote, so that Congress will give a favorable response to the requests from the farmers and rural communities of this country for a currency which can be conveniently and economically used for transmission through the mails in sums of less than \$1.

William Walter Phelps of New Jersey:—I want to vote for the farmers, the class that need this accommodation. There are plenty to speak a good word for the laborers of cities. Hundreds of organizations look to their rights—Knights of Labor and brotherhoods of every name. But the scattered farmers, the dealers in little villages, have no organizations to help them. I am always glad to aid such. I wish I had often the opportunity, both by my voice and vote. I am not sure that the voice would help, but the vote does, and they shall have it every time. I am glad they get it this time.

Mr. Dargan of South Carolina:—The object of the bill is not to supplant the fractional coin now in existence, but to supplement it. It is demanded by the people living in the country and in small towns, who wish to have the advantage of trading in the great money centers and getting their commodities on the best terms possible. On account of the extraordinary development of our mail system a very large retail trade has sprung up through the mails, and we have no currency suitable for the transaction of this class of business.

Postage on Seeds.

On the bill reducing postage on seeds, plants, etc., Hon. B. A. Enloe, chairman of the committee that had reported the bill, in his remarks said: "I call attention to the accompanying correspondence as evidence of the demands upon Congress. It was voluntarily addressed to me, and is important information. Out of the great mass of correspondence addressed to me on this subject, I will only present communications of State and National organizations." Then follow nearly two pages of official letters respectfully demanding reduced horticultural postage, written by officers of the State Granges of Maryland, Oregon, Indiana, Nebraska, Connecticut, Vermont, Missouri, South Carolina, Texas, Ohio, Rhode Island, Iowa, New Jersey, Massachusetts and Delaware; also from the National Agricultural Wheel, the National Farmers' Alliance, and the Secretary of the United States Postal Improvement Association.

Hon. Charles H. Allen of Lowell, Mass., in his speech supporting the measure said:

There is a large proportion of our people who are interested in one way or another in this matter of cheap postage. As far back as 1873 Congress recognized the wisdom of giving to the farmers of this land reduced postage on agricultural seeds and plants, bulbs and cuttings, and authorized the passage of an Act in that year placing the rate of those articles at one cent for every two ounces. This was further recognized in the Act of June, 1874, and the farmers enjoyed the reduced postage until the legislation of 1875, when the rate was put at one cent an ounce. From that time to this there has been continual discussion over this question

of reduced postage, but owing to the comparatively unorganized condition of the farmers, this remedial legislation has never been effected.

But last year this matter was taken in charge by the National Grange, and in November, by vote, it demanded a reduction.

This action has been followed by the State Granges of Colorado, Connecticut, Delaware, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Nebraska, New Hampshire, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia and Wisconsin, at their annual meetings, since the National Grange (28 States).

The State Boards of Agriculture of New Jersey, Pennsylvania, Vermont, New Hampshire, Maine and several other States, together with almost innumerable other State, county and local horticultural and agricultural societies, farmers' clubs, Granges, alliances, etc., have voted in favor of this object, and in so doing they have simply represented the wishes of the great body of the people who make up their vast membership.

I state this, Mr. Speaker, to the House to show that this attempt for reduced postage does not come from the seedsmen, who are not to profit by that reduction, but from the people themselves, who make up in vast numbers the organizations of the character which I have mentioned, and who pay the postage, and these people will see to it that they get the benefit of the reduction.

I do not propose to stand here at this time, sir, to discuss the merits of a bill for the reduction of postage on seeds, bulbs and cuttings from the present rate to four cents per pound, but I trust that a measure of that importance and magnitude will receive, at an early date, a favorable action in this body, and that the House may soon have an opportunity of voting upon it.

Progress.

Eighteen more new Granges—four in New York, three each in Pennsylvania, New Hampshire and Michigan, two in Colorado, and one each in North Carolina, Maine, Ohio and Massachusetts.

The Proceedings of the last meeting of the North Carolina State Grange show a gain in membership above losses of over 1000.

Sebastopol Grange.

With that enthusiasm in social affairs for which the Grangers are proverbial, says the *Santa Rosa Republican*, Sebastopol Grange, P. of H., is arranging for a grand picnic to be held at Morris' Grove, Sebastopol, the 12th of May. All the Patrons in the county and the people generally will be invited. The address of welcome will be by John W. Graeff. E. W. Davis, Overseer of the State Grange, will be the Orator of the day, and S. T. Coulter will also deliver an address. The Sebastopol cornet band and the Sebastopol Grange choir will furnish the music. The literary and musical program will be followed by lunch, and the afternoon will be devoted to dancing. They will have a good time, so let there be a large attendance.

A TEXAS MONOPOLY ENJOINED.—An Austin telegram says that on the 21st instant District Judge Towles rendered a decision in the case of the Attorney-General vs. the Texas Traffic Association. The Court granted a perpetual injunction against the association as prayed for by the Attorney-General. The Court ruled that the association contravenes the Constitution, holding that the articles of association assuming to themselves exclusive control of the entire railway traffic of Texas tended to create a monopoly, and were therefore void and contrary to the State Constitution forbidding monopoly. The Traffic Association, by its attorneys, excepted to the ruling, and gave notice of an appeal to the Supreme Court.

MERCED GRANGE will celebrate the 15th anniversary of its institution on the 5th of May. The 3d of May is in fact the anniversary, but it comes so near our regular Grange day that the Grange decided to celebrate on that day with literary exercises and a feast. All Grangers will be welcome.

BENNETT VALLEY GRANGE is considering the subject of a picnic for the 27th of May. Last Saturday the fourth degree was conferred, and the usual enjoyable harvest feast followed.

THE Granges of Sacramento county have arranged to hold a joint picnic at Beach's Grove on Thursday, May 3d. Prizes will be awarded for the various games and a good time is assured for all who attend.

A Life With a Lesson.

There is an invaluable lesson in the newspaper reports of the effect produced by Conkling's death. No young man, beginning life and hesitating between principle and policy, can afford to neglect it.

Roscoe Conkling was, above all things, a man of principle. He was aggressive and intolerant in asserting what he believed to be right. He never, in the whole course of his life, had any mercy for time-servers or trimmers. He hewed straight to the line he had marked out for himself, without regard to the consequences to himself or others. When he was one of the powers behind the throne, during the reconstruction period, he never for an instant abated one jot of his purpose to secure to the North and to the freedman the full results of the war, though his course caused some Northern merchants to denounce him as impracticable, and Southern ex-Confederates to declare that he was vindictive. He would not listen to any talk of compromise or treaty with those who had betrayed the country. To him certain Democrats were still rebels. When others wavered—when Raymond got up his Philadelphia Convention, and Greeley accepted the Democratic nomination—Conkling stood up all the straighter, like a great requalia, against whose massive trunk weak men might lean, and under whose spreading branches the faint-hearted might gather. It may be said of him that never once in his whole career did he perform an act or speak a word for the purpose of gaining favor or popularity, or, indeed, from any other motive than a conviction that he was right.

Now he is dead, and people are passing sentence on him. With one accord all men speak in his praise. The dispatch which was sent him from the Senate Chamber expressing a hope that he would recover was signed by the very Southern Democrats who had struggled for the destruction of the Union. Of his nine pall-bearers, four are Democrats. In the Republican State Convention of Ohio the memory of the man who had denounced Garfield's administration was so tenderly cherished that one who ventured to criticize him was nearly thrown out of the window. The very men who complained of his domineering behavior, and of his unwillingness to conciliate an enemy with smooth words, are now the first to do honor to his name and to pronounce him the typical American statesman. Whatever they may want in their living leaders, it seems that the quality they admire most in them when they are dead is honest fearlessness. In a political convention, filled with persons to whom the spoils are of more importance than principles, the man who is most "available" may poll the most votes. But when men's eyesight clears, and the film of office is brushed away, the average American chooses for his hero the leader who never flinched and never bartered his sense of right for political honors. *S. F. Call.*

From Tulare.

In a private letter, April 16, Bro. J. W. Mackie writes: Invitations have been sent to Lucerne and Buena Vista Granges to cooperate (in preparation for the State Grange). Lucerne Grange proposes having a picnic in the early part of May, somewhere near Tulare, and then talk up what is best to do. We have accepted the proposal and will select the picnic ground probably next Saturday.

FROM VENTURA.—We lately received a call from Mr. John S. Collins, for a long time Secretary and Past Master of Temescal Grange, the occasion of his return to Oakland being the marriage of his brother Edward, which occurred recently. Mr. Collins is the popular cashier and manager of Wm. Collins & Sons' bank in San Buenaventura. He speaks well of Ventura county and its prospects, and old friends will rejoice to learn that he is still prosperous.

DANVILLE GRANGE had a social on the evening of the 20th inst., which from all accounts was an enjoyable affair. The program was composed of vocal and instrumental music and a drama, which were well rendered by members of the Order. It resulted in adding about \$90 to the Grange funds.

It is with sorrow we report the death of Margaret Roache-Curn, mother of Bro. A. P. Roache. The host of friends who have become acquainted with and learned to honor and respect Bro. Roache and family will sincerely sympathize with them in their affliction.

YUBA CITY GRANGE has resolved to hold its annual picnic at Hock Farm on May 15th.

Do Not Set Gum Trees Around Your Orchard.

EDITORS PRESS:—I have a small orchard that was set out 18 years ago. Most of it has been worthless for three or four years past. The fruit was small and tasted like the bark. The peaches, at least the top limbs of some of them, were dying. Others seemed healthy, but did not bear.

I account for it by the fact that ten years ago I set gum trees on two sides of the orchard. As soon as the gum trees got two years old, the outside rows of fruit trees began to fail. The fourth year I dug those rows up. I thought the rest were far enough from the gum trees to escape damage, as they were 32 feet distant. But alas! every year since, up to the present, they have kept failing, until the three rows nearest the gums are utterly worthless, and the remainder so damaged as to be hardly worth trying to save.

I have dug up three more rows, and dug a hole around the tree from four to five feet across and three to four feet deep. Then wheeled two or three barrow-loads of well-rotted stable manure into each hole (except two into which I put a half-bushel of slacked lime) and filled with earth.

As to those that are not dug up, I carefully removed the earth to the depth of two feet around each tree, put in a couple of buckets of well-rotted manure (except two trees on and around whose roots I put nearly a patent bucket of slacked lime), then filled with earth, to see what the effect will be.

The land where the trees are dug up I have plowed twice since the holes were filled—the first time six inches deep and the second time about eight inches—and pulverized thoroughly each time. I am going to cultivate several times yet, then put a good coat of rotted manure all over the surface, and as soon as the first rains come next fall, plow it under deep.

After that treatment, do you or any of your readers think it will be safe to set young trees next spring?

I am going to cut down the gum trees next August. If that does not kill them, I am going to dig the stumps out.

Have any of your readers had a like experience? If so, they will confer a favor by answering through the PRESS.

SUBSCRIBER.

Brentwood, Cal., April 13, 1888.

SAN DIEGO AT CINCINNATI.—A great exposition, to commemorate the centennial of the Ohio valley and Central States, is to open at Cincinnati July 4th and continue to Oct. 27th—100 week days—under the management of special commissioners appointed by the Cincinnati Chamber of Commerce, the Board of Trade, the Ohio Mechanics' Institute, and honorary commissioners from Ohio, Kentucky, Indiana, Tennessee, Illinois, West Virginia, Pennsylvania, Michigan, Iowa, Missouri and Kansas. A fund of over \$2,000,000 has been subscribed by the people of Ohio, Indiana, Kentucky and West Virginia to guarantee the success of the exposition, and it is expected that, first and last, a million or two of people will attend. The San Diego Chamber of Commerce has appointed a committee, consisting of Frank A. Kimball, William A. King and George W. Hazzard, to arrange for and supervise a county exhibit there and then. Mr. Kimball was made chairman of the Supervising Committee, for the reason that, besides being one of the foremost horticulturists in the county, he will contribute largely to the proposed display of fruits and other products.

BRICKS FROM SLICKENS.—Some one writes the Bee from Wheatland: "A gentleman was here a short time ago investigating the slickens, of which we have an abundant supply in this vicinity, as to its fitness for the manufacture of bricks. Experiments with this substance in the past have resulted in the production of an excellent quality of fire-brick. Should the gentleman's researches be of a satisfactory nature he will probably establish a kiln here and enter extensively into the production of brick. It is said that 'everything is useful, and nothing was made in vain.' If this theory is correct, we can supply the world with brick!"

SHORTHORN AND JERSEY SALE.—On another page there is an advertisement of a sale of Shorthorns and Jerseys by Killip & Co., to which reference is made. The correct date of the sale is May 4th, and the number of Shorthorn cows is 20 instead of 30, and there will be several grade Jersey cows, but not the exact number of 10, as stated in the advertisement. We trust readers will notice these changes and attend the sale.

THE SAN JOSE FLORAL FAIR will be opened on Saturday, April 28th (instead of May 1st), at the solicitation of gentlemen who have arranged an excursion from San Francisco to Santa Clara valley on the earlier day.

M. M. ESTEE has declined the appointment tendered him by the Governor, of Viticultural Commissioner at large, in place of Arpad Haraszthy. He assigns the press of private business as a reason.

AMERICAN PATENTS.—The United States Government granted 21,378 patents during the year 1887.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

BIG DRAINAGE SCHEME.—Livermore Herald, April 19: The owners of the Rose and Black tracts, near Pleasanton, had surveys made last summer for a canal to drain their lands. As there is upward of 2000 acres in the two tracts, nearly 1000 of which are covered with willows, subject to overflow, and therefore unfit for cultivation, it will be readily seen that a drainage ditch would prove a great investment. When properly drained and cleared of willows, there is no better land anywhere than this. The plans which were made by County Surveyor Nusbaumer are for a canal 20 feet wide and about 3½ miles long. The contract for excavating this canal has been let to Geo. C. Stanley of Livermore, who will begin work on Monday next, with a force of men and teams. Numerous small lateral ditches will be cut, and the entire tract thoroughly drained. The owners of the Rose tract let on Tuesday a contract for clearing 400 acres of land of willows, and putting same in condition for cultivation. There were a number of bidders, but the lowest was Geo. C. Stanley. This work will also be completed this summer. The cost of the canal and clearing this land will aggregate fully \$25,000, nearly all of which will be distributed among the laboring men, and find its way at once into the channels of trade.

HEAD OFF THE PASSERINE PESTS.—"Subscriber" in Oakland Enquirer: I notice the sparrows are busy building their nests all over this fair city, which means a large increase in their numbers this year. Now if the good people who are allowing this to be done on their house-eaves, or wherever it may be, knew what a serious thing this will be in the future, they would destroy every nest and keep doing so until the sparrows get tired, and we will get rid of a tremendous nuisance.

Butte.

ORANGE BLOSSOMS.—Biggs Argus, April 19: Notwithstanding Butte county had quite a cold snap last winter, which pinched the leaves off and probably destroyed a few young sprouts of the orange trees, we believe in the main the cold snap was a benefit, as every tree has thrown out new and vigorous shoots, the new leaves are fresh and full of life, and what is still more pleasing to the eye and sense of smell, is the unusual amount of blossoms.

Contra Costa.

GOOD GRAIN.—Martinez Item, April 22: A specimen of growing wheat brought into town yesterday by Mr. Griffin from Dr. Carothers' farm near town, shows a growth of nearly four feet, well headed out. The condition of the grain goes to show that it will fully mature without some unforeseen accident of adverse weather. Mr. Griffin states that there is fully 150 acres of growing grain on the doctor's farm up to the average of the sample shown.

COUNTY ASSOCIATION AND FAIR.—Concord Sun, April 21: On Saturday, 14th inst., at Wiechers' hall, Concord, an organization was effected by the Board of Directors of the Contra Costa Agricultural and Industrial Association, electing R. C. Terry, Pres.; Wm. Craven, V. P.; C. S. Lohse, Treas., and S. Farjeon, Sec. . . . At a meeting of the Board of Directors at the fair grounds yesterday, it was decided to hold this year's fair from Sept. 24th to 29th inclusive.

El Dorado.

STRAWBERRIES.—Placerville Observer, April 17: There was placed on our table last Saturday a box of delicious strawberries raised on the Veerkamp farm at Granite Hill. The berries had been picked nearly two days, and were as plump and rosy as when picked. If we mistake not, these are the first raised in this county. The fact is being yearly demonstrated that El Dorado can and does raise small fruits and berries as early as any county in Northern and Central California.

Fresno.

THE GREAT VINEYARD.—Fresno Republican, April 20: W. C. West, manager of the California Fruit and Wine Land Company, informs us that work on their great vineyard and orchard enterprise is progressing steadily and satisfactorily. The immense estate of this company is located in what is known as the Smith Mountain country, and lies between the '76 canal and the east branch of this water-way. Nearly the whole of 12 sections is irrigable from these canals, and there is not a finer body of land to be found. It all lies within Fresno county, just north of the Tulare county line. About 300 acres were planted this season, a considerable portion in raisin grapes, but partly to oranges, olives, peaches, prunes, apricots, nectarines, and almonds. About 70 men and 100 horses are still employed, and will continue during the summer preparing ground for planting next season. A number of buildings of various dimensions have been completed, and viewed from a distance on the plains, present the appearance of a village.

COLORS HELP.—Rather unexpectedly the 25 colored people ordered by Messrs. Ownby & Williams from South Carolina, arrived in this city yesterday. The laborers were soon cared for, however, and during the afternoon were distributed among the various parties having contracts for them. The gentlemen mentioned have contracts for about 40 more negroes, which

will be sent for the latter part of this week. So far the darkies have given excellent satisfaction.

Humboldt.

A DAIRY ON MAD RIVER.—Eureka Standard, April 19: We learn from S. S. Loveren, owner of the Bay View dairy, on Mad river, that cheese-making will commence there next week. Dick Cleary, who for 14 years was cheese-maker for Steele Bros. of San Luis Obispo county, has charge. This is a guarantee that cheese turned out from there will be second to none made in the State. Mr. Loveren says this has been the most favorable season for farming operations he has ever known in Humboldt county. Our farmers this year have seeded an unusual amount of land and generally have put in varied crops. On his farm, besides the usual beet crop, barley and oats have been sown, and are all looking very fine. The thoroughbred Short-horns at the Bay View dairy never looked better than now. Mr. Loveren breeds for dairy purposes, and in this line his stock is equal to any in our county—he having spared neither expense nor time to secure the best and keep them pure and in good condition. We wish more of our dairymen would take the same pains. It would prove more profitable.

Inyo.

OWENS VALLEY ITEMS.—Independent, April 21: It is estimated that Owens valley will have to import about 150 tons of flour to carry us over till the new crop is ready. Farmers are sowing less wheat every year; they find it more profitable to grow alfalfa and make beef or raise horses. . . . The flock of graded Angora goats belonging to Horace Bellows multiply rapidly. This year the number of kids is not less than 1600. . . . Early this spring Lank & Kehoe got a lot of young fruit trees from R. P. M. Kelley of Reno. They were planted at Independence and quite a number of the young apple trees are now in bloom and will evidently bear fruit this year. All the trees are doing well. . . . Mr. McKnight will come down from Bishop Creek about a week hence to survey the various locations to be irrigated from the Stevens ditch. The ditch is nearly completed, and water will soon be turned into it.

Los Angeles.

CANNERIES.—Orange Tribune, April 21: At the adjourned meeting for the purpose of organizing a fruit canning and preserving company, held at the Water Office on Saturday last, the 14th inst., all present favored the enterprise. Messrs. Joslin, Chubb, Adams, Osburn and Trunnell, the Committee on Plan for Organization, reported as follows: That a stock company be formed with a capital of \$50,000, fully subscribed, and that 30 per cent of the amount shall be assessed the first year. Ten per cent of this shall be cash; the balance of the 30 per cent payable in marketable fruit or cash. Report adopted and committee discharged. Dr. Warner of Garden Grove; James McFadden, Westminster; J. W. Osburn, T. J. Lockhart, Charles Seba, J. B. Adams, Orange; and N. D. Ellis, El Modena, were appointed a committee to canvass for stock and report at an adjourned meeting. . . . The proposition for a cannery at McPherson is meeting with eminent success. Already a large part of the stock is taken. The McPherson Fruit and Canning Co. is organized with a capital of \$50,000, divided into 5000 shares of \$10 each. These 5000 shares represent two classes of stock—common and preferred. One thousand shares are common stock, which is for the purchase of plant; 4000 shares are preferred stock, and this stock is for the running expenses of the company and has this advantage, that it draws out at close of each season the principal and profits—in fact, it enables the producers of fruits, as well as the capitalist, to enjoy all the benefits of the enterprise pro rata for the number of shares owned. Here are buildings, together with rigs for drying part of the fruit that may be desirable, and a large amount will be dried by this company; here also are thousands of sweat-boxes and trays to convey fruit to and from the packing-house. Before any goods will be ready for shipment the S. P. R. R. from Anaheim to Tustin via McPherson will be completed, and the track will run alongside the packing-house. This is a very important and laudable enterprise.

THE ANAHEIM IRRIGATION DISTRICT.—Gazette: As will be seen by reference to our advertising columns, the Board of Supervisors have fixed upon May 4th as the time for the election to determine whether the Anaheim Irrigation District shall be organized under the Wright Irrigation bill. There are five precincts in the district. * * To all who know the topography of the country and the value of water in summer months, the exclusion of the Yorba precinct from the district where in all reason it belongs is a matter of much speculation. Under the law of riparian ownership, water at the Yorba precinct during the summer is abundant, and is also said to be allowed to run to waste, while the fertile valleys to the south are left practically without water. After the Yorba precinct is supplied, the stream is turned into their ditch and allowed to sink in the sands of the river-bed. A protest from the precinct was filed with the Board of Supervisors to be excluded from the Anaheim Irrigation district, and the board has so ordered. The board has included in the new district the precinct of Carlton, which cannot be irrigated with the present system of ditches. It is not now desirable, owing to the above facts, to incorporate under the Wright Irrigation bill.

(Continued on page 380.)

News in Brief.

THE new city of Elsinore proposes to the saloon in its new charter.

GROUND has been broken at San Diego on the Cuyamaca and Eastern railroad.

THE outlook for the salmon business on the Columbia this season is not promising.

GENERAL COOK, the new Major-General, will be placed in charge of the Division of the Missouri.

AMERICAN capitalists have invested \$80,000,000 in railroads in Mexico within the past few years.

SEVERAL lumber-mills at Emigrant Gap, that have been idle for years, will be started up this season.

THE inauguration of Rev. Dr. Stratton as president of Mills college will take place on May 4th.

A \$10,000 BATH HOUSE, with private baths and large swimming-tank, is to be erected at Fresno at once.

NUMBERS of families in the Western Highlands and Scottish Isles will settle in the Canadian Northwest.

CHAMBERLAIN, the Texas wolf-bitten patient who has been treated by Pasteur in Paris, has been discharged as cured.

MR. WILDERMOUTH, living near Campo Seco, Calaveras county, has six fig trees from which he dries 20,000 pounds of figs yearly.

FRESNO people say the newly-arrived colored field laborers do more work than Chinese, do it better, and give better satisfaction all round.

THE San Bernardino Index says: There will be no fruit cannery erected in San Bernardino this year, and perhaps in no other year to come.

CHINESE pheasants have increased so rapidly in some parts of Oregon that the farmers complain of them as a nuisance. They are said to destroy much grain.

THE California Steam Navigation Co. is building a new steamer and three large barges, for carrying grain, etc., between Stockton and San Francisco.

DURING one of the races in San Francisco last week, one of the horses jumped the fence near the finish and killed one of the spectators. Several persons were injured.

AN effort is being made by the New York Working Women's Society to have the factory inspection law amended so as to give women power to act as deputy inspectors.

THE Occidental and Oriental Navigation Co.'s steamer San Pablo while on a voyage from this city to Yokohama went ashore and is a total wreck. Her value was about \$600,000.

HENRY W. CADMAN of San Francisco takes the \$1000 prize offered by the American Sunday-School Union for the best essay on "The Christian Obligations of Labor and Capital."

THE steamship Eurica completed the run from Sandy Hook to Queenstown in six days, four hours and 40 minutes, beating the previous best record, made by the Umbria, by two minutes.

THE A. O. U. W. society of Portland, which has raised \$100,000 to build a temple, will in all probability increase the amount to \$150,000 and build a theater in connection with their temple.

A NUMBER of Grass Valley merchants are considering the advisability of forming a Merchants' Protective Union, an organization that shall put a limit to or entirely abolish the system of giving credit, and shall endeavor to close all stores all day Sundays.

IN the last five years \$60,000,000 worth of diamonds have been taken to England from the African diamond-fields. Since 1871, \$100,000,000 worth, or three and a half tons, have been taken from the Kimberley mine alone.

THE San Francisco resident Consul, Barroilhet, of Chili is prepared to furnish information as to the 800 miles of railroad for the construction of which his Government has lately advertised for bids. It is estimated that the work will cost about \$7,000,000.

NEAR Bodega, Sonoma county, John H. Miller was engaged in mowing hay, and had cautioned the children against running through the clover in front of the mower. Later in the day his three-year-old child playfully attempted to run in front of the machine, when it was caught by a knife and both legs were instantly severed from the body.

THE total shipments forwarded East by the Southern Pacific during March amounted to 43,661,220 pounds. This is a very large total for the month of March, during which East-bound shipments are usually light. It was occasioned by the tremendous shipments of California products made by merchants who were anxious to take advantage of the low rates ruling previous to March 10th.

GENERAL GONZALES, formerly President of the Republic and now Governor of the State of Guanajuato, has taken a bold and decisive step in decreeing the suppression of bull-fighting in that State. He declares that the sport is demoralizing, and is leading people into habits of wastefulness and disorder, and the employment of large sums for constructing bull-rings and maintaining them is entirely improper in the present state of civilization.

DEATH OF A WELL-KNOWN PIONEER.—It is telegraphed from Drain, Douglass county, Oregon, that Jesse Applegate, one of the oldest, foremost and best-known Oregon pioneers, died suddenly April 23d at his home, aged 78 years. He was known throughout Oregon as "The Sage of Youcalla," and did more than one man's share to lay the foundation of this State.

(Original.)

The Sioux Chief's Daughter.

[This little poem has been so much improved (?) by various readers and compilers of recitation-books that it seems to me to be almost senseless as it now reads in the various "One Hundred Choice Selections." As the lines appear with my name tacked to them, it is but natural that I should insist on restoring them to their normal state so far as I can; and if the lines are read or republished, I humbly submit that they ought to be perpetuated as I wrote them.—JOAQUIN MILLER.]

Two gray hawks ride the rising blast;
Dark cloven clouds drive to and fro
By peaks pre-eminent in snow;
A sounding river rushes past;
A lone lodge tops a windy hill;
A tawny maiden, mute and still,
Stands waiting at the river's brink,
As weird and wild as you can think.
A mighty chief is at her feet;
She does not heed him wooing so—
She hears the dark, wild waters flow;
She waits her lover, tall and fleet,
From o'er yon beaming hill of snow.

He comes! The grim chief springs in air—
His brawny arm, his blade is bare;
She turns; she lifts her small, brown hand;
She looks him fairly in the face;
She moves her foot a little pace
And says, with coldness and command,
"There's blood enough in this lorn land."

"But see! a test of strength and skill
In storm-born waters, now I will
Give you, and you. Stand either side!
Stand left and right. Now peer you low
Across the waters wild and wide.
See! dipping, dripping in the stream,
A bough of blood-red berries gleam!
Now this, brave men, shall be the test:
Plunge in the stream, bear knife in teeth
To cut yon bough for bridal wreath.
Plunge in! and he who bears him best,
And brings yon ruddy bough to land
The first, shall have both heart and hand."

Now one throws robes with spiteful air,
And winds red fox-tails in his hair;
But one with face of proud delight
Entwines a plume of snowy white.
And swift each proud, impatient brave
Leaps headlong in the sounding wave.
And now they dive, dive long, and now
They shake the foam from dripping brow.
They near the shore at last; and now
The foam flies spouting from a face
That laughing lifts from out the race.

The race is won, the work is done!
She sees her lover's plume of snow;
She cries aloud, she laughing cries,
And tears are streaming from her eyes:
"I see him clutch the bended bough!
'Tis cleft—he turns! is coming now!"

"Oh come! my white-crowned hero, come!
Come back to me! my lips are dumb,
My hands are helpless with despair;
The hair you kissed, my long, strong hair,
Is reaching to the rushing tide,
That you may reach it when you come."

"How slow he buffets back the wave!
O God, he fails! O Heaven! save
My brave, brave love! He rises! See!
Hold fast, my love! Strike! strike for me!
Strike straight this way! Strike firm and strong!
Hold fast your strength. It is not long—
O God, he sinks! He sinks! Is gone!"

"Great Spirit, what is this I dread?
Why, there is blood! the wave is red!
That wrinkled chief, outstripped in race,
Dives down, and, hiding from my face,
Strikes underneath! . . . He rises now!
Now plucks my hero's ruddy bough,
And lifts aloft his red fox-head,
And signals he has won for me. . . .
Hist, softly! Let him come and see."

"And did I dream, and do I wake?
Or did I wake and now but dream?
And what is this crawls from the stream?
What, you! The red fox at my feet?
Oh, here is some mad, mad mistake!
That blade has blood between your teeth!
What! You have brought your bride a wreath?
You sly red fox, revenge is sweet!"

"Lie still! lie still! till I lean o'er
And clutch your red blade to the shore. . . .
Ha! ha! Take that! and that! and that!
Ha! ha! So! through your coward throat
The full day shines! . . . Two fox-tails float;
And drift and drive far down the stream,
And all life seems some dreadful dream."

"But what is this? What snow-white plume
Climbs up from out the watery tomb,
So weary, wounded, bent and slow?
It is! it is his plume of snow!
His feet are on the land, his hand
In mine, his face is to my face,
And who shall now dispute the race?
My love shall heal his wounded breast,
And in yon tall lodge two shall rest."

A young lady of Atlanta, Ga., Miss Sallie Autman, lately married Samuel Fleming, an old man 50 years of age and blind. Miss Autman is 15 years of age and some one insinuatingly inquires, "Was it for love?" Of course it was. Fleming has wealth and owns several gold mines, and Sallie became deeply attached to them at first sight. She loves them ardently.

At the Art Museum.

John and me, we didn't call late on stayin' so long in Boston, but it was our first visit, an' we staid on an' on, till finally I says to him:

"Johnson Winterbottom," says I, "I'm clean tuckered out with Boston. It's high time we was to home in Pottsville, Vermont. The candles ain't run, the sarsages ain't all made, an' here I be, gaddin' round Boston."

"I think we'd better go this week," says he. It was to the breakfast table, and Cousin Sarah spoke up an' says:

"But you haven't been to the Art Museum yet. If you are going home so soon, hadn't we better go, to-day, to the Museum?"

I felt as if I couldn't see another sight, and said so.

"Oh, but you must go there," she cried. "There is so much to be seen! And it would be a shame for you to go home and say you didn't go to the Museum of Fine Arts. Why, everybody goes there!"

"Is there a show there?" asked John.

"Show?" said Cousin Sarah. "Oh, you mean a play? No, but you will see a great deal of both ancient and modern art."

"What is art?" says I, "or who is he?"

She stared at me as if I had been a great curiosity of some kind—a two-headed woman, or a human-headed calf—centurion, I believe they call 'em.

"Art?" says she, finally, "why, it's—it's pictures, and pottery, and statuary, and—mummies, and things."

"Oh!" says I, an' I confess I was relieved. "I've heerd so much talk about art since I come to Boston, I was wonderin' how many folks really knew what it was, or is. It's mighty easy for some folks to talk about what they don't know nothin' about; and then ag'in it's mighty hard for others to express what they do know. Well, if it's pictures you want me to see, I'll go. I'm a master hand for 'em. But are you sure they are good ones?"

"Good ones!" she exclaimed in a kind of shocked way. "Why, there are no better."

"Because," I went on, "they ain't chromes? They ain't speakin' portraits of martyred presidents in seventeen colors? They ain't high-colored pictures of painfully bloated children pickin' blue roses in yellow grass, or life-like representations of abnormally developed young women walkin' out under old-fashioned parasols? Because, nothin' would tempt me to go if they are."

"Why, Philura!" says she, in very astonished and mortified tones, "why, the greatest artists in the world, past or present, are represented there. It's an extremely fine collection. How can you talk so?"

"Because," I breathed a sigh of relief, "up to Pottsville, Vermont, we have talk of art, too. Several families have works of art (bought of a peddler) in their parlors that I wouldn't want in my pig-pen."

"Not unless you wanted ter stunt the pigs," broke in John.

"And we are allus havin' agents come along with magnificent works of art that he offers—seein' it's me—for fifty, or even twenty-five, cents a dozen. Land! If you know how I'd been pestered with art peddlers I guess you wouldn't blame me for bein' shy of whole museums full of art."

She laughed.

"You're so funny," says she. "You needn't be afraid of that kind of art there. Works of art, indeed!" an' she laughed again.

To tell the truth, I really wanted to go. I hated to go back to Pottsville without havin' seen all the art there was in Boston. For 'long back when I first come, Cousin Sarah had said to me, says she:

"Nobody is anything in Boston unless they own fine pictures and bronze casts."

An' although I couldn't own 'em I'd made up my mind to know something about them. Johnson said it wa'n't necessary, he didn't believe, to understand 'em; for he'd asked Sarah what the bronze image in the front entry was, an' she said she'd forgot; but I said it seemed a pity for us to come to Boston an' stay a hull month an' not know any more about art than we did when we come. So we went.

An' although Pottsville's ideas of art would have kep' me away, I trusted to Cousin Sarah, and we went.

I felt kittish, as we went in under a big arched doorway, an' I didn't know what to say after we got in. It was different from any art I'd seen in Pottsville Four Corners. Some of it was a thousand times better, and some of it a sight worse.

We went first into a room full of broken statues. Some had their arms broke off, an' some their legs. Some of 'em were without heads, an' others were in middlin' good repair. One would have been considerable good-lookin' if she'd had her dress made higher in the neck and hadn't lost her nose.

"These rooms," said Cousin Sarah, "contain antiquities from Greece and Rome. They are very old."

"Land!" says I. "They look it. They show their age plain. One look at 'em is enough to keep me from ever wantin' to be a Grecian or a Roman Catholic, even if I'd no religious principles to keep me straight."

"They show you," she went on, real smilin' an' kind, "what the old sculptors could do—Praxiteles and the rest. It is strange that none of our modern sculptors catch their grace and remarkable truth and sincerity."

"Yes," I says, "they could sculp very well; but I should think somebody would sculp some new noses an' other members, an' glue 'em on to these broken things. I can make a kind of glue, now, that'll stick forever. Squire Stofflebran's folks sent down for the recipe just before we come to Boston."

An' then we found ourselves in a room where there was some mummies. Now, if there was anything in this world I'd allus wanted to see, it was a mummy! An' here they was!

But I should have walked right by 'em if Cousin Sarah hadn't pointed 'em out.

"You mustn't overlook the mummies," she said. "They are in those glass cases."

I went over and took a good look at 'em. They aint handsome. Whatever them old Egyptian kings and queens may have been in their day, they'll never be hung for their beauty now; especially the one with her head smashed in. But as I leaned over the case and viewed the remains, I said to myself:

"Here you be, poor creature, a thousand miles from home, an' more too;" that is, if they're Egyptians an' not American Injuns, which they looks like. "There you was kings an' queens of the realm. Love an' sorrow, happiness an' trouble, joy an' grief, good health an' poor, chickenpox an' measles, all checkered your career just as they do our'n now-a-days. In them old days when Egypt was the hull world, an' the rest of the airth a heathen wilderness, what would you have said if you'd been told that 3000 years hence you'd be layin' under glass cases as curiosities in the most cultured city of the hull world? You wouldn't a-believed it. No, an' I, Philura Winterbottom, what if I, 3000 years from now, should be dug up and carried off, say to the Feejee islands, to take life easy under a glass case?"

The thought was too much for me, an' I wiped my eyes. As I stood with my handkerchief to my eyes, Cousin Sarah spoke up:

"Come, Philura, you look like the chief mourner at a funeral. You're attracting attention, too. Your husband has gone along; let us join him."

I looked round and saw a fellow with specs on laughin' to himself; but says I:

"When folks are laughin' at me, they aint doin' nothin' wuss. An'," says I, lookin' him right in the eye, "I've seen 'em that looked capable of a good many wuss things."

We went on and found John standin' in a crowd up close to a burst, gazin' at it apparently not seein' anything around him. I went up to him and says I:

"John, who be you interested in? Do you want an introduction to that party, or be you already acquainted?"

"Philura," says he, "don't laff. I'm studyin' art—with an eye to business. I'm looking into this thing to see how bursts are made. They say these things are just made out o' clay. Now you know that clay-bed over back of the east lot? I'll bet I could make as good-lookin' a burst as any o' these, an' mebbe a darn sight better. I'm goin' into the burst business another fall, myself, Philura. I can supply all the museums in the United States and still have clay enough left to build a few more. I tell ye, Philura, there's money in it—whe-e-w!"

He stopped, lookin' so wild an' excited, I laid my hand on his arm, an' said:

"Good gracious!"

They are the strongest words I ever use—bein' a member—an' he knows it. I went on:

"If you, Johnson Winterbottom, go to dabblin' in art, you'll 'burst' the farm an' what little we've got in the bank besides. An' as for your moddin' in clay, I'd give more for a model husband, a model father and a model church member than I would for all the men on a burst you could git up—or women either."

An' then we went upstairs into a room full of embroideries an' lace. The embroideries was consid'able faded. Cousin Sarah showed me a single piece of yellow old lace, worth, she said, several thousand dollars. It wasn't no great shakes as I could see, either; although if it had been washed clean, and starched and ironed, it would have looked well enough for every day, though it aint my taste.

Then the pottery! I don't mean pots and kettles, as one not 'versed in art' might naturally suppose, but dishes, and jars, and vases and—well, the land knows what.

Then we found ourselves in the picture-room, and I was indeed glad I come. Such lovely pictures! Cool, green rivers with trees overhangin', natural as life; cattle browsin' on the hill; cows knee-deep in water; bits of the sea in a storm; rocky coasts with the sunset gildin' of 'em; country lanes shaded by green willows; bits of autumn color when the maples git all aflame; a man milkin' after sundown, (John says the artist put the milker on the off side, and any mortal cow would a-kicked him over; but I wouldn't let that trifle disturb my enjoyment of what—at last—I felt was true art!)

The best of all to me was the picture of a young girl standin' under green trees listenin' to the spirit voices. I didn't need that Sarah should tell me it was Joan of Arc. I knew it, an' lookin' at her there, I seemed to understand why she left home, an' led by them same voices, with that same eager, glietenin' look in her eyes, go up and take command of a great army, inspirin' them all with patriotism, even if she come to a scaffold at the end. She had to.

It was some time before I could get away from Joan. And her eyes followed me as we passed on to the next room full of portraits of

George Washington an' lots of other patriots. But it was George that fascinated me.

"To think," I said, to the partner of my joys—an' when he can't dodge 'em, of my troubles—"to think that we are gazin' on the Father of his Country!"

"Oh, pahaw!" says he, "come along. If you didn't know that was George Washington, you'd think it was as humbly an old duffer as there is here."

"Johnson Winterbottom," says I, real severe, "I should think that was a noble face an' full of character, wherever I saw it, whether in the chair of State or on a farm in Pottsville. An' more'n that, I should know him for a gentleman."

Then there was a room full of pictures made with charcoal. John said they looked dauby an' smutty, an' he could make better ones himself; but after lookin' at 'em a little I seemed to see lots in 'em.

There was the moon in one, jest comin' up beyond a clump of hemlocks. I've seen it just so in our back pasture lots of times; an' I listened for the whippoorwill's voice as it sounds sometimes when I'm out after the coveys, John bein' belated with his hayin'.

But instead of the whippoorwill I heard the impatient voice of my John.

"Come on," says he; "what in time do you see in them daubs to look at so long? Come, we shall be late to dinner."

I joined Cousin Sarah, and we started for the door; but we hadn't got half-way down the stairs when I see the worst statue I'd seen yet. It didn't have a rag on.

"For Heaven's sake," I whispered to Cousin Sarah, "look at that."

"Yes," she said, lookin' at it quite bold, "that's the Venus De Medichy; the Venus De Meelo is in the next room. Do you care to see it?"

"See it!" says I. "No; not if she looks like this one. They can't be decent women, whoever they be, or they'd wear something, if it wasn't more than a six-cent calico."

And this was what I meant when I said some of it was wuss than the "works of art" we have in Pottsville 4 Corners. Them wear clothes; I dunno but they have to, to cover up their deformities.—Portland Transcript.

A Match Debate.

A chew of gum came rolling up to a quid of tobacco with a look of disdain wrinkling its pretty little face. The gum was petite, and pink and rosy like the dainty mouth that had been chewing it with all the demure satisfaction that an Alderney or Jersey finds in a similar process. The tobacco was dark, uneven, indifferent and bilious looking, unlike the man who had thrown it away. And the gum said: "You are a low-down, heathenish-looking object; how I do pity you! Your mission is one of destruction. You ruin the breath; you discolor the teeth; you bespatter the whiskers; you contaminate the system with nicotine poison." And it was so deeply impressed with the list of evils that it became for the moment speechless.

"But you need not be making so much ado about it," the tobacco here found a chance to reply, "for reform begins at home. You are one of the social evils. I stay out on the street; but you invade the parlor and drawing-room; you weaken the saliva glands as much as I do. You cause dyspepsia; you overtax the muscles of the jaw, already overworked with talking; you cause strange, weird contortions of the mouth that make frightened husbands think their wives are trying to talk but are speechless; you bring unmeasured trouble to the school-teachers; you—you—"

But the gum obtained the floor again and continued: "You cannot charge any destruction to me, but you commit actual damage. Just think of the stains in the mistress's carpets and the great blotches on the walls and the puddles on the car floors! And when that man spat some juice from you into that boy's eye, how the little fellow squirmed with pain! You are always causing destruction and I am not."

But, a little later, when the chew of gum had somehow got upon a chair and a man sat upon it and then went to get up and the chair followed him, and, no matter how much the man turned around, the chair persistently kept behind him, when the man, thinking some one had tin-canned him, grew desperate, hopped about the floor and upon the counter, broke the show-case in six places, upset the hat-rack on the stove, scattered three boxes of apples over the floor, and jumped through the glass door to the great consternation of a team of horses, the chew of tobacco laughed itself black in the face and expressed willingness to compare items of damages.—C. T. G. in Monterey Democrat.

DOES THE MOON INFLUENCE EARTHQUAKES? Observations on the part of a large number of scientists prove that earthquakes are more frequent at the time of full moon and change of the moon than at other times, and also more frequent when the moon is nearest the earth or when she is on the meridian. The cause to which this fact has been assigned is the action of those forces which produce the tides of the ocean; their similar influence upon the solid land strata leads to their disturbance in the shape of earthquakes.

YOUNG FOLKS' COLUMN.

Trading Babies.

[Written for the RURAL PRESS by C. P. NETTLETON.]

"Harry, Harry, where are you? I want you to take little sister out for an airing this afternoon, and be sure and take good care of her."

"O ma! have I got to? Flossie cries too much and the other boys don't have to."

"Please don't trouble me now, Harry, but run right along like a little man. The 'other boys' may have even worse things to do than roll a baby carriage along."

Harry watched baby while she was being wrapped up, and she looked so sweet he felt it was not so awful, after all, to have to take her out on the street, but he would not for the world have admitted now that he was more willing.

After one or two parting words from his mother he started off, but had been out only a short time when Flossie, who, strangely enough, did not like to be outdoors, changed her mind and did not look as pleasant as when they started. She commenced to get uneasy and pounded the bottom of her carriage with her feet—a sure sign she wanted to go back. They had not been out long, and Harry knew very well it was no use going back home yet, so he tried to amuse her. She was only about a year old and was not readily amused.

Harry could hear some of his companions playing ball a block off and wisely kept out of their way, as he remembered a certain day not so very long before when he had left Flossie on the sidewalk and played ball for awhile, and been punished for it on reaching home.

So he went on with his pretty little charge, when all at once Sammy Banner, a boy Harry liked but did not know very well, came round a corner, and he too was wheeling a baby carriage, with a sweet little baby in it just about the size of Flossie. When the two boys had said "Hello," and stared a little, Sammy said: "Say, let's go along together." And as misery likes company, Harry was of course willing.

"Don't you think babies are mean little things?" said Harry. "I aint going to have any when I grow up, and I'm going to kill 'em all off, like Herod, so we boys won't have to haul 'em round."

"Who was Herod?" replied Sammy. "I never heard of him. Did he kill all the babies he could get?"

"Why, don't you know?" said Harry, in wonder that everybody did not know all he knew. "Herod was a norful wicked old fellow who lived in the Bible, and once when he wanted to kill Jesus he had policemen go round and rake up all the babies, and then he chucked 'em all in the water—or—well, he killed 'em anyway. Just you wait till I'm big, and see what a time there'll be."

Sammy seemed shocked, and said in an awestruck tone:

"You wouldn't want your own sister killed, would you? and there'll be somebody's sister when you grow up."

"Well," said Harry, evidently struck by the argument, but not wanting to let it be seen, "if they don't cry perhaps I won't, but they'd better look out. Does your sister ever cry?"

"No," said Sammy, evidently wishing to make matters sure; "not unless she's got something the matter with her, mamma says. Does yours?"

For little Flossie had been so interested in the other baby and boy that she had stopped fretting and was now looking very pretty.

"Yes," said Harry; "most all the time, and ma makes me take her out every day."

"So does my ma," replied Sammy eagerly; and from that moment the two boys were close friends.

They had walked on some way when Harry, struck by a sudden thought, said:

"Say, I tell you what let's do—trade babies! I'll give you my splendid, beautiful big jack-knife my uncle gave me, 'cause your girl don't cry, and Flossie does a little, and we'll call it square."

"Let's see your knife," replied Sammy, cautiously; and as Harry slowly opened blade after blade, till six blades and a corkscrew stuck out half-way round it, Sammy was plainly dazzled. Still he did not say anything till Harry said:

"Pooh, what you waiting for? Mamma says Flossie weighs 31 pounds, and I know she's a great deal nicer than your baby."

Then Sammy said: "Look here, do you know who you are talking to? I licked Dick Alling the other day, and you'd better look out or you'll get hit."

Harry saw he had made a mistake, and said soothingly:

"Well, Flossie does weigh 31 pounds, but she cries some and yours don't; that's a great deal better. Say, I'll give you this, too, if you'll swap." And he held up a three-cornered piece of glass about three inches long.

Sammy looked at it with a sniff. "Huh! what's that good for?" he said.

"Just you look through it and see," replied Harry, at the same time showing him how to hold it, so that when one tried to look through it objects were out up in odd shapes; It was a piece of an old chandelier, and Harry prized it highly, but he was bound to have that baby that did not cry.

Sammy looked at the knife and glass and

from them to the babies, both of which seemed to be listening with a good deal of interest to the animated discussion, as if they too thought a change would not be a bad idea. Sammy was going to take his time, however, and suddenly said, in a low tone: "Do you think our mammas will know?"

Harry had not thought of that possibility at all and said, in a half contemptuous manner: "No, they won't know; won't care if they do. Say, what's her name?" pointing to the other baby.

"Nina," replied Sammy; and then with the comforting remark that he did not have to take the baby out but once a day and didn't care if Flossie did cry a little, he made a dash at Nina's carriage and lifted her out.

Harry did not wait, but recklessly hauled Flossie out of her seat, and each boy put his baby into the other's carriage.

Having stowed away the helpless little animals, the two boys faced each other to bind the bargain in schoolboy manner.

"What goes up the chimney?" said Harry.

"Smoke," replied Sammy.

"The bargain's done never to be broke," said Harry.

It was now Sammy's turn.

"What are shoes made of?" he said.

"Leather," said Harry.

"The bargain's done forever," replied Sammy, and each boy had no idea that it was not.

After that the boys hardly knew what to do; they had done something unusual, they knew, and all they could think of now seemed too small and worthless.

Finally they separated and went home, but had no idea what a tempest had been started by their innocent "swapping of babies."

It so happened that Mrs. Childs, Harry's mother, had a headache before he came home, and had given orders to the servant-girl that she was not to be disturbed, but to take care of the baby herself. Now, the servant-girl had been in the house but two days, and, not being fond of children, had paid as little attention as possible to Flossie, so, as Flossie and Nina were about the same size, and all babies look pretty nearly alike except to their mothers, she must be excused if she did not notice the change.

But in the other house it was different. On Sammy's arrival Mrs. Banner came out to take her baby out of the carriage. Now Mrs. Banner was a nervous, excitable little woman, so when she bent down to take out her cherished infant and found a strange face staring at her, it is no wonder that she almost fainted. She recovered herself in time, however, and seized Sammy by both shoulders and shook him hard while she said, "What have you done, what have you done? Where is Nina?"

Sammy managed to blurt out, while his mother's shakes cut up the sentence into almost atoms:

"I met—Harry—Childs—and he had—a nice—little baby—and—he want—wanted—to swap ba—babies—and—we did."

Mrs. Banner stopped shaking Harry, and instead of going into hysterics as had seemed likely, she sat down on the step and buried her face in her hands and commenced to shake. Sammy thought she was crying and tried to console her by saying: "But see, mamma; Harry gave me this knife and a piece of glass, and that's real beautiful. Things look real funny through it, and—and you can have it if you really want it."

Then his mother explained to Sammy that she could not possibly consent to the trade, and that he must go with her at once to where the Childs lived and get Nina back. Sammy could hardly believe it, and very excitedly told his mamma that they could not possibly trade back because they had "bound the bargain" in the regular way. She became very stern and went into the house for her bonnet and shawl. But now a serious difficulty arose. Sammy said he did not know where Harry lived! There was but one thing to do, and Mrs. Banner did it at once. She got a directory and looked for the name "Childs." Alas! there were 12 catalogued there.

Sammy now began to take an interest in the matter, and volunteered the information that Harry could not live anywhere except in that part of the city where they lived, because he went to the same school Sammy did. Fortunately there were but two families by the name of Childs living in just that part of the city, and it did not take long to find the first house, which was the right one.

Great was Mrs. Childs' surprise on learning the errand of the strange lady who had insisted on being admitted. She explained why she had not found out the change in babies, and agreed with Mrs. Banner that the boys ought to be taught wisdom in such a manner that they would not forget it.

What the babies thought I cannot say, but the boys, when next they met, decided that it was not such a pleasant thing, after all, to trade babies.

AN EASY PLACE.—A lad once stepped into our office in search of a situation. He was asked: "Are you not now employed?" "Yes, sir." Then why do you wish to change?" "Oh, I want an easier place." We had not a place for him. No one wants a boy or man who is seeking an easy place; yet just here is the difficulty with thousands. They want easy work, and are afraid of earning more than their wages. They have strength enough to be out late at night, to indulge in vices and habits which debilitate them. They all have strength enough to waste on wine or beer, or tobacco, all

of which leave them weaker than before; they have strength enough to run, and leap, and wrestle, but they think they have not the strength to do hard work. Will the boys let me advise them? Go in the hard places; bend your back to the task of showing how much you can do. Make yourself serviceable to your employer, at whatever cost to your personal ease; and if you do this, he will find that he cannot spare you. And when you have learned how to do work, you may be sent to teach others; and so, when the easy places are to be had, they will be yours. Life is toilsome at best to most of us; but the easy places are at the end, not at the beginning of life's course. They are to be won, not accepted; and a man who is bound to have an easy place now may as well understand that the grave is about the only easy place within the reach of lazy people.—*Exchange.*

GOOD HEALTH.

Cancer on the Tongue.

Dr. W. E. Taylor of this city, in his reported remarks at the late Medical Association meeting, said that "the immediate mortality by removal of the tongue for cancer is comparatively small." We presume what was really said was, "removal of the cancer from the tongue." The mortality of such cases is undoubtedly "small," but the favorable results or permanent extirpation of the cancer is much smaller.

In regard to such removals we have before us a very interesting letter from Mr. Phil. R. Smith, of Victoria, British Columbia, addressed to Mrs. Dr. Cook of this city, who writes under date of April 1, 1888, as follows:

"The tongue has not troubled my wife now for the past two weeks; but previous to that time I was somewhat afraid, from occasional pains, of the cancer returning. I am now satisfied with the result and the patient way in which you worked with it. You have done more than I dared to hope for." The letter concludes with many thanks for the successful treatment of this case of cancer on the tongue.

The above case was one which was pronounced unmistakable cancer by several physicians of Victoria. Before submitting herself to the treatment of Mrs. Cook the cancer had been twice removed by the knife, and once burnt out with caustic, but it making its appearance for the fourth time induced her to try some other treatment, as above noted. We once more repeat our honest belief that the use of the knife for the extirpation of cancer is barbarous and ought to be made a subject of legislation. We have given in these columns abundant reason for our belief that cancer can be cured by constitutional treatment without either knife or caustic, and again challenge any rebuttal of the evidence which has been published in these columns. If the Medical Association, which met in this city last week, had appointed a committee to investigate this matter, we believe it would have resulted in more good for the profession and for humanity than all which that body, as such, has done for years. But we suppose that suffering humanity and medical progress will have to stand aside to do reverence to an antiquated and barbarous code of medical ethics which has come down from the dark ages, and which is a bar to any investigation of any medical discovery outside of the profession until public opinion actually forces such discoveries upon their attention and practice, as it has done in numerous instances and eventually will do in this.

Health of the State.

The report of the State Board of Health for March shows a very satisfactory condition of immunity from disease and death. The fatalities from 87 cities and towns with an estimated population of 734,000 were but 1066, or 1.4, per thousand.

Smallpox is rapidly dying out. Fifteen deaths from that disease are reported for the entire State, only four of which occurred in San Francisco.

Reports of sickness from 99 localities indicate a very favorable diminution of diseases throughout the State for the past month. This is especially noticeable in acute diseases of the lungs and inflammatory affections of the bowels.

Diphtheria during the month is reported as having exceeded its former boundaries, and invaded localities where it has not heretofore been prevalent. The general conclusion in regard to this disease, according to the report before us, is, "that it is a specific poison, not depending on defective sewerage or sewer gas, as we find it in localities without sewers, as well as in those well sewered; among the rich as well as among the poor; in cities, and in remotely isolated dwellings. The disease is communicable, and can be carried long distances by infected persons, clothing, and railway cars. It can only be arrested, or at least restricted, by the thorough disinfection of the persons and premises of those in contact with the dread disease. It should, therefore, be legally incumbent on every person to give notice of the disease whenever present on their premises, or in their families. We hope such a law will be enacted in our next Legislature.

The dreaded disease of cancer claimed 17 victims in this city alone during the month.

DOMESTIC ECONOMY.

PLUM PUDDING.—Pick and stone one pound of the best Malaga raisins, which put in a basin with one pound of currants (well washed, dried and picked), a pound and a half of good beef suet (chopped very fine), three-quarters of a pound of white or brown sugar, two ounces of lemon or orange peel, two ounces of citron, six ounces of flour, and a quarter of a pound of breadcrumbs, with a little grated nutmeg. Mix the whole well together, with eight whole eggs and a little milk; have ready a plain or ornamental pudding mold, well butter the interior, pour the above mixture into it, cover a sheet of paper over it, tie a cloth over the mold, put the pudding into a large stewpan containing boiling water, and let boil quite fast for four hours and a half. When done, take out your mold, turn upon a dish, serve with the following sauce: Put the yolks of three eggs in a stewpan with a spoonful of powdered sugar and a gill of milk; mix well together, add a little lemon peel and stir over the fire until it becomes thick (do not allow it to boil), add two glasses of brandy and serve separate, or it may be poured over the pudding and both served together.

CROQUETTES OF RICE.—Wash well half a pound of best Carolina rice, which put into a stewpan with 1½ pints of milk and a quarter of a pound of butter; place it upon the fire, stir until boiling, then place it on a slow fire; cover the stewpan, and let simmer very slowly until quite tender; rub the rind of a lemon upon a lump of sugar weighing a quarter of a pound, then pound the sugar in a mortar very fine; add it to the rice, with the yolks of five eggs (mix well), stir a few minutes longer over the fire until the eggs thicken, but do not let it boil; lay out upon a dish, when cold, form it into a number of small balls or pears, or into long shapes, according to fancy; have three or four eggs in a basin well whisked, dip each piece in singly, and then into a dish of breadcrumbs, smooth them gently with a knife, dip again into the eggs and breadcrumbs, put into a wire basket, which put in a stewpan of very hot lard; fry a nice light-yellow color, drain on a cloth, dress them pyramidically upon a napkin, and serve with powdered sugar sifted over them.

APPLE DUMPLINGS.—Peel and cut out the core with a cutter, cover the apple with paste, tie it in a cloth, and boil according to size. These are all the better for being boiled and kept in the cloth hung up for four or six weeks and rewarmed. They may, likewise, be baked. Boiled puddings containing a large quantity of paste should be made with flour, in which is mixed one teaspoonful of culinary alkali powder to four pounds of flour, which will cause them to be much lighter.

COOKIES.—One cup butter, two cups sugar, four eggs, four cups flour, three tablespoonfuls milk, three teaspoonfuls baking-powder. Rub the flour and butter thoroughly together, cream the butter and sugar, beat the eggs separately, add to the whole nutmeg, cinnamon or any flavoring preferred. Sift in the flour and baking-powder, and make it stiff enough to roll out and cut in any shape desired.

CHICKEN PIE CRUST.—One egg, six tablespoonfuls of melted butter, one cup of sweet milk, two cups of flour, three teaspoonfuls of baking-powder. Cook a chicken and put it, with gravy thickened a little, into a baking-dish. Stir together the above ingredients and spread over the chicken.

RICE PUDDING.—One-half cup of rice, uncooked, two quarts of sweet milk, one-half cup of sugar, a little nutmeg and cinnamon; put in the oven and bake for two hours or more. Do not stir to break the top crust; if you stir at all, lift the crust gently to one side. It is good warm or cold.

EGGS A LA CREME.—Six eggs boiled hard and chopped fine, and stale bread. Put in a dish alternate layers of chopped eggs and grated bread. When the dish is full, pour on one pint of boiling milk seasoned with salt, pepper and one tablespoonful butter. Bake a light brown.

DEMI-PLUM PUDDING.—Prepare the mold, then add a layer of plum pudding, broken in pieces, that has been left from the previous day, alternately, till full; fill up with custard, and steam or bake for three minutes. The remains of any kind of pudding may be used thus.

ICE CREAM CANDY.—Two cups of sugar, half a cup of water. When boiling, add a teaspoon of cream of tartar dissolved in a little water. Boil ten minutes without stirring, then add a small piece of butter and boil till it will harden in water, then flavor and pull.

PORK CAKE.—One pound of fat salt pork chopped fine, 1½ cups of boiling water poured over the pork, two pounds of raisins, currants and citron, two cups of sugar, eight cups of flour, one tablespoonful soda, and cloves and cinnamon to taste.

BUTTERMILK CAKE.—One cup of buttermilk, one large cup of sugar, two-thirds cup of shortening, two eggs and one teaspoonful of soda. Flavor to taste. By putting in mixed spices it makes a good spice cake.

STEWED VEAL.—Lay a knuckle of veal in a saucepan with two blades of mace, an onion, a small whole pepper and some salt, with two quarts of water; cover close and let it simmer for two hours.

The Week.

The drouth gives rise to considerable apprehension concerning the outcome of the season in grain crops. There have been, during the present week, quite considerable showers which have refreshed limited areas both north and south, but the showers were unfortunately only local, and the great valley expanses are not encouraging to look upon just now. It is true that the winds have been active and appearances have portended rain, but there were not clouds enough to go round. The orchardist and vineyardist can do much to conserve the somewhat short supply of water by constant and thorough cultivation, but the grain and grass-growers have only hope left as the guaranty of satisfactory results from their fields. It is to be hoped that we are about through the cycle of moderate winters, and that a good, old-fashioned wet year is not far distant. Haying is now in progress in some parts of the State, and a fair weight is being secured. In others it will take more rain to make a growth worth starting the machines into. The hay-cutting

generally brings rain. It cannot come too soon, from the present appearance of things.

The usually well-moistened North also wants water. A dispatch from Portland says the country is now suffering for rain, and unless it comes speedily crops will be short in some localities, especially in Eastern Oregon and Washington Territory, where considerable wheat was winter-killed and has been resown.

The Government and the Railways.

The telegraph brings notice that the first formal step on the part of the Government against the assisted overland railways has been taken. Following the report of the Pacific Railway Commission and the message of President Cleveland in transmitting it to Congress, the movement is to be now toward recovery of money shown to be due to the Government, providing Congress will agree to an Act authorizing the legal steps on the part of the Government. The first arraignment is to be of the Union Pacific and the Kansas Pacific companies, and the proposed Act directs the Attorney-General to forthwith institute proceedings in the courts of the United States, either in law or equity, to enforce forfeiture, provided for in the law of 1878 and other Acts, and collect the amounts due the United States from the company, its stockholders and officers. He is also directed to bring suit against the Union Pacific and Kansas Pacific, to recover the proceeds of the wrongful issue of stocks and bonds, amounting to \$7,500,000. Included in the action are John B. Alley, Elisha Atkins, Ezra H. Baller and Sidney Dillon, and join as parties defendant Jay Gould, Fred L. Ames, Russell Sage and others. The sum of \$36,000,000, more or less, the proceeds of the sale of bonds, all claims growing out of transactions which may be the subject-matter of a suit, are to be exempted from the statute of limitations.

Such are the parties to the proposed initial action, and such the colossal sums of money to be recovered. Congressman Anderson of Iowa introduces the measure in the House. The introductory clauses of the bill seem to be a condensation of the facts brought to light by the investigations of the Commission, and they are stated as follows:

It appears from the report of the Pacific Railroad Commissioners that the Union Pacific has for years persistently refused to comply with the conditions of the various Acts of Congress relating to it; that the officers and managers have squandered large sums out of the gross revenues in exorbitant and unprofitable enterprises, and have divided immense sums of money among themselves; that the company has, since the passage of the Act of 1873, issued new incumbrances without the consent of Congress, thereby impairing its credit and destroying the value of the United States lien; that it has levied excessive charges upon people tributary to it; that the company has, by its unlawful acts, forfeited its rights, privileges and grants, including its privilege to further time in which to pay its indebtedness to the United States.

Another measure now before Congress, according to the telegraph, seems to be a proposed method of forfeiting delinquent railways to the Government, which is credited to another representative named Anderson of Kansas. The bill is drawn for the purpose of providing a feasible method for operating a Pacific road—after its acquisition by the foreclosure of the Government's mortgage—a method which shall at once yield the United States an assured income on its investment, and also secure the people against the abuses of discrimination, pools, and monopolies. For this purpose it would enact that the Government shall purchase the first mortgage bonds with the surplus in the treasury in protection of its own second mortgage, and after foreclosing the latter operate the road as a public highway, to be kept open to any carrier of freight upon payment of uniform and regulated tolls for the use of its track.

These measures will reopen the whole subject of Pacific railway mismanagement and will give fresh material for political platforms and discussions during the coming campaign.

A FRAUD KILLED.—There is reason for rejoicing in that Commissioner Stockslager has given the Reavis-Peralta land claim its quietus. A more impudent and bare-faced blackmailing job has hardly ever been attempted, and it appears that both the Surveyor-General of Arizona and the General Land-Office at Washington have understood and dealt with it aright.

The Labor Supply.

The Santa Clara Viticultural Society last week discussed the question which is now uppermost in the minds of all fruit-growers, what will be the labor supply available this summer. Concerning encouraged immigration of negroes from the Southern States, there was much difference of opinion. This is natural enough, but it is too soon to say what negro labor will be worth in California. It is possible that they will be found valuable. We shall have to wait for the result of the season at Fresno and other points where considerable numbers will be tried this year.

Some members had found the native Indians of California more valuable than negroes, but even if this should be the general experience, it would avail little, for the supply of Indians is too small to reach far, and only orchards within reasonable distance of the ranoherias can thus be aided. No doubt Indians will be used in fruit harvest this year as far as the supply goes.

All seemed to agree that the number of Chinamen in sight was rapidly decreasing. It was said that they had almost wholly disappeared from the Willows district. We shall soon know how many the labor contractors will be able to gather together.

Concerning the employment of school children in the San Jose district, Mr. Babb said that school authorities are going to dismiss children, in accordance with the desires of a majority of their parents, a few weeks earlier. Last season mothers and children were found picking fruit and enjoying themselves, too. Last year he had two Spanish families having some boys and girls on his farm, and put the children at work and paid two of them just what he paid one man, so that it was a good investment on both sides.

The use of San Francisco children was also considered, and the wise conclusion was reached that this would not be satisfactory unless the parents accompanied the children, and the whole family went to work. This, of course, necessitates arrangements for housing the families, and it is more than likely that the cottage system will ultimately be accepted as the true way for the fruit-grower to equip himself for the summer's work.

Concerning bringing in European or Eastern white laborers, the question turns upon how many can be profitably employed on the fruit farm, or in the neighborhood, during the whole year. At the San Jose meeting, it is reported that Capt. Merithew suggested that a comfortable cottage could be erected for \$250, in which they could remain all winter with their families, and work in summer. It is possible that some families could earn enough from May to November to support themselves the whole year, but very few would be found frugal enough to store up their earnings to sustain themselves during the winter. It seems most likely that with cottages on the large orchards men with families could be installed, the men working the year around, and all the family, including sisters, cousins, and aunts, turn in during the summer months for the picking, packing and drying.

The requirements for labor are increasing. In the San Jose district, Mr. Daggett said he was of opinion that at least one-fourth more would be needed on account of the increased production, partly owing to new acreage which will come into bearing, and it was his opinion, therefore, that workmen would be scarce.

Concerning the importation of negroes, the Chronicle states that a regular organized agency has been established in the South for the purpose of placing colored help in Central and Southern California, and already hundreds of negroes of both sexes have been placed with farmers, business men and private families by this contract system.

F. M. Ownbey of the Missouri Pacific railroad and R. A. Williams of the Memphis & Little Rock road, two of the principals in the scheme, are now in this city perfecting arrangements for establishing headquarters on this coast. Mr. Ownbey gave the following particulars about the scheme:

The fact which led to the colored labor agency whose interest we represent was the reports in the South of the agitation in California against Chinese labor. As the South has tens of thousands of negroes who can barely make a living, we conceived the idea of contracting for

negro help here and shipping them out to take the place of the Chinese. So far the scheme has been successful and satisfactory, as the increasing business of our agency indicates. In securing the negro laborers for this State our agent here enters into an agreement with the person wanting the help to furnish him with able-bodied laborers, male or female, as the case may require, for the period of one year from the date of the arrival of the laborers at the place specified, at the following wages: Male laborers, \$15 a month; female laborers, \$10 a month; boys, \$7.50, and girls \$5 a month. The employers supply the help with suitable food and lodging. The person employing the help deposits in his local bank a sum sufficient to pay the transportation charges of the negroes, and this money is paid to the contracting agency when the help is delivered and found to be as represented. Then between the agency and the colored help an agreement is entered into, by which the former furnishes the employment stated and transportation free on the condition that the latter remain with his employer for the term of one year and reimburse him for the amount expended in his transportation in installments of two-thirds of his monthly wages until the debt is paid. A specification of the contracts is that the treatment of the colored help and the daily hours of labor shall be the same as with the white laborers.

As we have said, there is much of an experimental nature in this undertaking, but it is worth attention, because most certainly we need a good supply of reasonably priced labor in this State to make our great fruit industry profitable.

The Experiment Stations.

Last week Prof. Hilgard visited San Luis Obispo county and selected the land upon which the University Culture Station for that district will be established. The site selected is near to Paso Robles upon land owned by J. V. Webster, who donates the land in trust to the University for experimental purposes. The selection by Prof. Hilgard has been approved by the Board of Regents, and the work of improvement will proceed at once. The necessary cost of buildings, amounting to \$2000, has been donated by enterprising people of the region, and the buildings are to be ready for occupancy by September 1st.

On Monday and Tuesday of this week, Prof. Hilgard was in Tulare examining land offered for the station which is to represent the upper San Joaquin valley. The Tulare people have raised \$3000 for buildings, and like the Amador people, desire rather better buildings than those absolutely required. It was Prof. Hilgard's intention, after making the location at Tulare, to proceed southward and examine the several tenders of land made in Los Angeles, San Bernardino, and San Diego counties.

It is desired to have these locations decided upon by the Board of Regents, and everything put in readiness for planting this fall.

NATIONAL CITY WATER-WORKS.—Last Thursday week—April 19th—was a proud and festive day for National City, which then celebrated the completion of the water-works of the San Diego Land & Town Co. This great system, embracing a reservoir whose area is nearly 700 acres, and more than 60 miles of mains, has been built at a cost of about \$1,000,000. Thousands of invitations had been sent out to prominent persons in all parts of the State, and the public of the whole bay region was bidden to attend, with free transportation; so the city was crowded with visitors. Places of business were decorated in honor of the occasion. There were music, speeches, fruit and flower exhibits, and a grand ball in Horticultural hall closed the proceedings.

A FLORAL FAIR, in furtherance of the beneficent aims of the Woman's Exchange, is to be held in this city two or three weeks hence. The successes of the flower festival which they gave a year ago, and of their chrysanthemum show last November, encourage the lady managers in the hope and confident expectation of making a display that shall at once delight all who look upon it and add to their means of doing good.

FROM CASA DEL MAR, where Professor and Mrs. Lemmon have been busy studying, photographing and painting Torrey's pine—described by him on page 377 of this paper—she writes a pleasant personal letter, delighted with the salubrity of the place and the richness of its flora.

COSTLY CARELESSNESS.—A pair of valuable horses were poisoned in Nevada, by drinking out of a tub into which strychnine had been put to cure hives.

Torrey's Pine.

[Written for the RURAL PRESS by PROF. J. G. LEMMON.]

Scientists the world over and lovers of nature generally will be interested in an investigation now going forward concerning the life-history and habits of the rare and curious Torrey pine—*Pinus Torreyana*—on the coast of Southern California.

A mournful interest attaches to this pine from the fact that there are but few trees of it left, and these in a certain locality limited to a few miles of the sea-coast hills at and on both sides of the beautiful and newly established watering-place of Del Mar, San Diego county, through which town passes the A. & T. R. R. from San Bernardino to San Diego.

The bluff or mesa at Del Mar is high and unbroken for two miles, but about a mile distant, on each side, occur canyons and breaks in the mesa, and on the sides of these cling the few Torrey pines, for the most part gnarled and beaten prostrate by the buffeting winds from the Pacific.

On the sheltered inner side of the hills, and on the spurs of the canyons, however, the trees remain erect, and here are found the largest specimens, a few trees measuring nearly 2 feet in diameter, and elevating their flattened crowns to a height of 30 to 35 feet.

The trees are prolific bearers, the cones of three different years' origin being found abundantly on most of the trees; these, when mature, the second year, are above the medium size, four to five inches long, ovate, with few large, thick scales terminated by short, strong, but not formidable prickles.

The nuts are very large, nearly an inch long, but slightly flattened, brown, with a narrow, thickened, black wing. The shells are thick and hard, requiring a smart blow with a hammer to fracture them. The seeds are very oily and delicious to the taste.

The pollen-bearing or male flowers are terete very large, 2 to 2½ inches long and three-eighths of an inch in diameter.

The leaves are in fascicles of fives: very large and strong—the strongest pine leaves known—and are 6 to 12 inches long.

In many respects this species of pine stands alone among California conifers. No other species is found within 50 miles of it; none other survives such buffetings by the sea winds, and no other bears such large flowers, hard nuts and such strong leaves.

The trees are comparatively rapid growers, individuals two feet in diameter being often not more than 40 or 50 years old.

In a few localities young trees of all ages are found, but always less in number than the older trees, from which it is inferred that the species is slowly succumbing to its environment, and must, if not protected, soon become extinct.

SCENE IN AN OLD ORCHARD IN BUTTE COUNTY.

As the visitor for the first time views this curious pine, he is struck by the persistence of its character, and the suggestion at once occurs that this is the species of pine from which most might be expected by planting it along the now deforested coast hills of California.

Seeds will be sent for propagation to the Forestry Experimental Station at Santa Monica, and no doubt in a few years trees from there may be had for trial on proper application.

Orchard Thirty Years Old.

The fruit industry is comparatively such a young one in California that special interest attaches to the orchards planted by the pioneers. The engraving that we give is of an orchard 30 years old, which stands in the Rio Bonito colony, which has been recently established in Butte county. We are indebted to Preble & Young for the views. The tract is a part of the famous Fernandez Grant, and comprises the Henshaw ranch and the Biggs ranch, containing 2600 acres in all. It lies about 20 feet above the water level of the Feather river through the dry season. On the

west is the low Coast Range, covered with trees, shrubbery and grasses to the summit. On the East are seen the Sierras, with crowns of perpetual snow.

SHORTHORNS FOR JAPAN.—Mr. Robt. Ashburner of Baden Farm shipped ten head of choice young graded Shorthorn dairy cows to Yokohama on the steamer Gaelic last Monday. They are for a dairyman established in Yokohama, who has had all his cows for the last six years sent to him by Mr. A., so that we may reasonably presume that the several shipments made during that time have been satisfactory to both buyer and seller.

A TIMELY HINT.—The San Andreas *Citizen* remarks that it now behooves the fruit-raisers to be watchful of late frosts. Every one should have material at hand to raise a smoke in the orchard if there is any indication of frost. A little time and a few cents of cost may be the saving of hundreds of dollars worth of fruit.

A SWEDISH COLONY has been established at the old Mallagh place, about four miles from Creston and seven miles from Paso Robles. The San Luis Obispo *Republic* says that a town-

site of 60 acres has been laid out and 20-acre farms in long strips after the manner of the small farms in Europe, with the farmers all dwelling in the village. The proceeds of the sales are remitted to Fatherland to aid others in coming to live on the pleasant Huer-Huero.

Scene in Wood Lawn, Shasta County.

The illustration of a scene in Wood Lawn is taken from a spot that is to be donated as a public park in this beautiful section. Wood Lawn is located a mile and a half from the center of Redding, and is in the famous Piedmont region in Shasta county, of which it has been said:

"Many of the landscapes are little short of enchantment. Eroded by a thousand streams and tumbled into every conceivable shape, there is among these billowy hills nothing wanting that the exacting lover of nature could desire. There are here stretches of stately forests, and clumps of trees and scattered groves with delicate shrubbery and clouds of wild vines along the water-courses. There are walks and alamedas with generous sweep, but not too prim or over-symmetrical. There are sunny lawns and irregular glades opening far into the woodlands, all of which man may well enjoy though he cannot imitate."

The engraving is made direct from a photograph, and accurately represents some features of our California woodland scenery.

THE WILLAMETTE VALLEY HORSE-BREEDERS' ASSOCIATION was organized at Salem, Oregon, April 14th. Its object is to encourage the better breeding of horses in Oregon. The charter members are G. G. Glenn, W. L. Townsend, David Grierson, Smith Lucas, A. L. Hodson, J. A. Tanner, G. A. Higgins, J. Francis, E. J. Frazier, Henry Fletcher, D. L. Hall, J. T. Beckwith, W. W. Baker, R. A. Wright and A. W. Carey. E. J. Frazier, Salem, Ogn., is secretary.

A ROSERY PLANNED.—We learn from the *Sun* that Brooks & Fiesch have secured from the San Diego Land & Town Co. a tract of 10½ acres, lying on the line of the motor road about two miles from National City, which land they intend to use as a general nursery, with the cultivation of roses as the dominant specialty.

POMONA'S FLOWERS.—The annual flower fair at Pomona, for the benefit of the Public Library will begin May 1.

SCENE IN WOOD LAWN, SHASTA COUNTY.

AGRICULTURAL SCIENCE

Agricultural Work by the Geological Survey.

As there is now pending before Congress a proposition to enable the U. S. Geological Survey to carry on the agricultural work provided for by law, and as Congressman Morrow of California is giving especial attention to the measure, it seems pertinent to allude to the matter at some length.

The movement was brought formally forward by the adoption of the following resolutions by the California State Grange, at the meeting of October, 1887:

WHEREAS, Agriculture lies at the very foundation of our national prosperity, and is justly entitled to an ample share of the fostering care of the General Government; and

Whereas, In the opinion of this body it is of the highest importance that accurate and reliable information concerning the agricultural features and peculiarities of the country, and particularly of the newer States and Territories yet to be settled, should be within the reach of the intending settler and immigrant; and

Whereas, The law creating the Geological Survey of the public domain of the United States provides for "the classification of the public lands and examination of the geological structure, mineral resources and mineral products of the National domain," but in the actual execution of the work the first provision has thus far remained a dead letter, so far as any of the information needed by agriculturists is concerned, while the most elaborate and minute investigation of even the most remote matters relating to the geological structure and mineral resources have received abundant attention; therefore be it

Resolved, That the State Grange earnestly prays the Honorable the Senate and House of Representatives, that steps be taken and provision made to the end that the Geological Survey shall discharge the first duty intrusted to it by law, to wit: "The classification of the public lands;" together with such other service to the agricultural development of the country as properly belongs to that effort.

Resolved, That copies hereof be transmitted to the Honorable Representatives of California in Congress, and that their approval and support of such measures as are needed to attain the result be most earnestly solicited.

In order that the matter may be fully understood, we publish below an essay on this subject by Prof. E. W. Hilgard, Director of the University Agricultural Experiment Stations, which was read at a convention of representatives of agricultural colleges and experiment stations which was held in Washington, D. C., October 18 to 20, 1887. We publish the essay because the official report of the convention has not yet appeared, and because in order to secure action at the present session of Congress, it is necessary that the subject should be brought forward prominently at once.

It is important to state that Prof. Powell, Director of the Geological Survey, heartily approves the measure to extend the work of the survey in the manner proposed:

Essay by Prof. Hilgard.

As, owing to the pressure of official duties at this season, I am unable to attend the meeting of agricultural chemists connected with experiment stations, I beg leave to submit in writing, for its consideration, a brief discussion of some points which, to the majority of those likely to be present, may not suggest themselves as forcibly as in the case of those who, like myself, have labored, and are now laboring, chiefly in regions in which, from whatever causes, agriculture is still passing through its first period of development. When it is considered that such regions comprise nearly all the United States lying west of the Mississippi river, the only material exceptions being the older settled portions of Missouri and Iowa, and parts of adjacent States, it is not easy to overestimate the importance, not only to that immense territory, but to the United States at large, of avoiding the mistakes made by the settlers in the older States; of placing within the reach of the actual or intending settler or immigrant, a knowledge of the facts and conditions with which he has to deal in his practice, and of the best means to be employed in overcoming the numerous difficulties with which he has to contend in a *terra incognita*.

It has been broadly claimed, and even somewhat dogmatically contended in the course of some of the discussions on the subject of the proper functions of the experiment stations, that their main duty and object should be to enlarge the knowledge of agricultural science, and that to act as bureaus of reference and information for the farming population is a departure from their true spirit and intent. I think we cannot be too emphatic in the repudiation of any such point of view, and it must be patent to all who have followed the discussions relating to the bills for the establishment of experiment stations, whether by the States or the National Government, that a totally different view of their functions was taken by their advocates, and that on any other basis than that of effectually aiding in the solution of practical questions as they arise, no such measures would have had the least chance of acceptance by the several legislative bodies. It is not, however, merely as a matter of good faith with legislatures and taxpayers that such a course is advisable and necessary. I contend, and am most thoroughly satisfied from a somewhat protracted experience in such work, that in no other way can we obtain such fruitful subjects of investigation in the domain of agricultural science, or be assured that what we hold to be true does not need a host of corroborations and provisions in order to render it applicable to all cases. It is the endless multiplicity and variety of the problems pre-

sented for solution by the practical farmer that serves as the touchstone of our theories, and by continual attrition, now at this point, now at another, modifies our conceptions into a shape in which we may feel sure of their correctness. In the presence of the multitude of suggestions and "live" problems thus continually presented to us in the newly-settled regions, the laborious search for proper subjects for investigation, that sometimes troubles our colleagues in the Old World, becomes an unknown quantity, the only danger being that the pressure of details may be so great as to drown, to a certain extent, the proper pursuit of a subject until it shall have been evolved into a definite form or proposition. The occurrence of such aggravations lies, doubtless, within the experience of many here present. It can, of course, be remedied only by a more adequate supply of means, such as is, or will be, afforded by the "Hatch Bill" when fully carried into effect.

It should then in my view be distinctly understood that the experiment stations so endowed must perform the double function of a bureau of reference and information, and of a laboratory (in the widest sense of the term) where those points in agricultural science most directly interesting to the region for which it is established, are investigated to their uttermost ramifications, theoretical and practical.

But in order that these functions may be fulfilled to the best advantage, the institution should not be obliged to await the tardy and irregular action of applicants for information. It should have the means for getting possession of the actual facts of the case in advance of the settler, or at least of the time when the farmer, by irrational practice, shall have gotten himself into difficulties which the station will be called upon to solve for him. The attainment of such knowledge involves, of course, the operations and results of an agricultural survey; and where such work has been done by the State (as is the case in the majority of those lying East of the Mississippi river), the work of the experiment stations will be greatly facilitated, although it is unfortunately true that in but too many cases the "Geological and Agricultural" Surveys, provided for by law, have rested content with the fulfillment of the first-mentioned attribute, and have left agriculture to shift for itself as best it could. Even where an attempt has been made to describe and investigate the agricultural features, it has too often been done in such a manner as to indicate, on the part of the director or writer, either a very slim acquaintance with the matter, or an unwillingness to give to so distasteful a subject more thought and attention than was absolutely required by the letter of the law.

But for the newer States and Territories, where it is now most urgently needed, no such work has been done, and none is at present in prospect. It is true that the law creating the United States Geological Survey provides for "the classification of the public lands, and examination of the geological structure, mineral resources and products of the national domain;" and the first report of the director of that work (1880) states that in his opinion "the intention of Congress was to begin a rigid scientific classification of the lands of the national domain . . . for the general information of the people of the country, and to produce a series of land maps which should show all those features upon which intelligent agriculturists, miners, engineers and timbermen might hereafter base their operations. . . . And to this end a careful beginning has been made." It is curious to note that both in the wording of the law and in the remarks of the director (Mr. Clarence King), the agricultural side of the work is mentioned first, and to compare therewith the actual performance of the survey during the last six years. It has done excellent work in the way of the much-needed topographical maps; it has laid down on these the geological and mineral features of the regions explored with a degree of accuracy and minuteness which has commanded the admiration of the civilized world and has aided powerfully in the development of the mining industries of the United States. But when we inquire what has been done to benefit the agricultural industry, to give to the farmer or immigrant the needed information so copiously afforded the miner, we quickly come to the conclusion that the agricultural side of the work has been left exactly in the state of "careful beginning" referred to by Director King in 1880.

It is no part of my object to discuss in detail the causes of this pointed omission. It may be said in general that in doing as it did, the United States Survey followed the lead of the majority of State surveys; that its work was done in the direction in which there was the greatest active demand, so that while farmers got nothing it is also true that they asked for nothing.

The Land Office has, through its surveyors, actually collected more or less of the information wanted concerning the agricultural adaptations of the lands traversed by them. But this information is of so very general a character, and collected by men so little versed in the subject, that even if it were published in an available form it would be of little avail toward replacing agricultural surveys. The maps and pigeon-holes of the Land Office are not what is wanted either by the farmer or the experiment stations.

It has been suggested that this work be undertaken by the Department of Agriculture. But this would be a revival of the undesirable multiplicity and duplication of public surveys that was done away with by the special Act of

Congress consolidating all under one head. The topographical and geological work now so well carried out by the geological survey is absolutely essential to an intelligent discussion and description of the agricultural features. All the machinery is there, and it only needs an additional endowment and the employment of competent agricultural experts to do all that is necessary in the premises. Were the agricultural work undertaken *de novo*, endless and unnecessary expense would be incurred in the duplication both of work and of appliances. The functions of the Department of Agriculture and those of such a survey are so clearly distinct that it is difficult to see how any conflicts could arise, as has been feared.

But whatever may be the machinery to be provided, or the department of Government under which this work shall be carried on, it is essential that it should be inaugurated and carried forward as quickly as possible. It is needed by the resident farmer, in order to guide him in his methods of cultivation. It is needed by the immigrant, in order to give him reliable information as to where he may find a home adapted to his wants, outside of the recommendations of interested parties. It is needed by the experiment stations, in order that they may have a basis of well-ascertained facts upon which to conduct their experiments and investigations so as to result in the greatest good to the greatest number, and so as to avoid the most serious mistakes resulting from imperfect reports from persons unused to accurate observation. Last, but not least, such work forms a most needful basis for truly practical instruction in our agricultural colleges: instruction which shall tell the student not only what he shall do in certain supposititious cases, but also what, in fact and in practice, are the conditions each will have to deal with in his own State.

Without such a basis of accurately observed facts, the experiment stations will never be able to do their best work, from unavoidable ignorance of the conditions under which agriculture exists in their respective fields of action. It is impossible for them to obtain this basis through their own exertions, within any reasonable limits of time. It should be done for them, and for the agricultural population at large, as a Government work.

ENTOMOLOGICAL.

The Vine-Hopper Trap Again.

EDITORS PRESS:—To my treatise on "How to Destroy the California Grapevine Hopper," which was published in your issue of April 21st, I am making a few additions—the results of later work—which may be of interest and benefit to your readers. Since writing on the subject much work has been done, out of which has grown a few improvements.

1. The trap as detailed before should have a heavy cloth stretched over and fastened to the lower portion of the gauze which may be sewed to the lower rim of the hemisphere in such a manner as to turn upward toward the center when closed. This being well saturated with kerosene will catch many hoppers which would otherwise fall from the gauze and roll out when the two parts come together.

2. The best solution to apply to the gauze is a mixture of kerosene with a small portion of crude petroleum.

3. When the trap is closed over the vine it should be held there a moment after the vine is disturbed, as it is found that if operating long without rubbing on fresh kerosene the insects may sometimes take a second jump, which would liberate them if the trap was opened at once.

Another and Better Form of Trap.

The following described appliance is the best found yet and is most commonly used at the time of this writing, though somewhat more expensive than the one previously described:

Frame two semi cylinders, using for this purpose band-iron one-eighth inch thick and one-half inch wide, which should be joined with rivets at the corners.

These parts should be hinged together with small butts which may be riveted to the frame, such, that when covered with green gauze it may be opened and closed over the vine.

This trap needs no top, but should be provided with a bottom of either heavy cloth, or what is better still, two semi-circular tin pans about 1½ inches deep, and so formed that in coming together to form the circle, a space is left for the stump of the vine and stake, say eight inches long and three inches wide.

A cloth or sponge should project from the edges of the hole to close completely about the vine when in use.

For vineyards under 10 years old, and some even older, 18 inches is a sufficient diameter for the cylinder, which should be about 2½ feet high so as to accommodate long-pruned varieties.

The last dimensions may, however, be modified to accommodate the shape of particular vines.

A portion of the upper part of the frame left free will serve as handles; or these may be added, if desired, in which case they should be attached near the upper center of each semi-cylinder.

In my desire to render this remedy available,

for the present season, I have given to the public the results of the first efforts, without delaying to perfect apparatus as we are able to do by longer experience.

The additions suggested here make the appliances more complete, and more may yet be added later on, though I apprehend that little improvement can be made to the trap last described, which is at present in general use.

J. H. WHEELER,

Chief Executive Vit. Officer.

San Francisco, April 25th.

Cases for Entomological Specimens.

Mr. Chas. F. McGlashan of Truckee possesses probably the best entomological collection on the Pacific Coast, and certainly the best arranged one. The collection is especially rich in butterflies, as he has spent many years in gathering the different genera and species. Aside from his own collection, Mr. McGlashan supplies those found on this coast to Eastern and European collectors. His system of preserving and exhibiting specimens is novel and very effective. The specimens are so arranged that the lower as well as upper side may be observed and studied, and the method of mounting is such as to prevent the attack of any parasitic insects.

Mr. McGlashan has recently patented, through the MINING AND SCIENTIFIC PRESS Patent Agency, his peculiar system of preserving and exhibiting entomological specimens. The case is made wholly of glass, preferably in the form of a six-sided box. It is made in sections, each side being a separate piece—that is to say, the top is one piece of glass, its bottom another piece of glass, and each of its sides one piece of glass. The meeting edges of each piece are beveled or chamfered to an angle to suit the particular case, and these joints are thoroughly cemented together, so that the sections of the case become practically a single piece, forming a hollow shell or casing which is permanently and hermetically sealed.

Before finally sealing the sections of the case the specimen is placed in position in the following manner: To the inner surface of the bottom section is firmly cemented a small piece or standard of soft wood or cork, and on top of this a small sheet of absorbent material, such as unsized or blotting paper. The impaling pin is then passed through the body of the specimen and through the blotting paper, its point being inserted into the cork, so that the specimen is thus supported in approximately the horizontal central plane of the case and may be observed from all sides.

The piece of cork or soft wood which serves as a standard differs from ordinary things of the kind, in that, before being placed in position, it is treated with a suitable insecticide—such as creosote, carbolic acid, cyanide of potassium, chloroform, etc.; and the piece of absorbent paper is treated in the same way. The piece of paper, in addition to its object of giving forth a vapor destructive to parasites upon the specimen, serves also to steady the impaling pin in the cork standard, and further, the medicated cork and piece of paper will prevent the injurious attacks of those parasites that may drop from the specimen upon the bottom of the case.

The main feature of the invention is the mode of preserving the specimens, which consists in mounting them within an all-glass case permanently and hermetically sealed. Each specimen is excluded from the air for good. No harm can come to them, as would be the case if doors were provided to afford access as in an ordinary show-case or where the joints are made simply with paper pasted over them, for in both instances the air, dust and dampness find access to the interior and soon spoil the specimen.

The specimen may be inspected from all sides and above and below. The construction of the case is of the simplest character, requiring no ledges, dovetails, grooves or clamps to hold the sections together, but simply requiring the edges to be mitered or beveled to other suitable angles and all held together as one piece by means of a proper cement. Hermetically sealing the case prevents destroying insects from getting in. The label or description of the specimen, its history, and any matter of interest connected therewith, may be firmly cemented to the inner surface of the glass.

Australian Parasites of the *Ioerya*.

EDITORS PRESS:—It may interest you and your readers to learn that I have recently received from Australia about a dozen specimens of a species of *Calostoma*, a scale insect closely related to our *Ioerya*, and that several of them were parasitized by small, two-winged flies. About 50 of these flies had issued in transit, and all but one of them were dead when received; already ten others have issued from the parasitized *Calostomas* since their arrival here, and are now confined with several *Ioerya* on a branch of an orange tree. It is to be hoped that this venture will prove successful, and that these parasites will multiply to such a degree that the dreaded *Ioerya* will become a thing of the past in California. The sender, Mr. Crawford, writes me that the *Ioerya* are very scarce in his locality, and that several colonies of them which he had started upon some orange trees in his garden had been completely exterminated by these parasitic flies.

Los Angeles.

D. W. COQUILLETT.

PALM VALLEY! THE LOUISIANA TRACT!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land? DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?

DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?

DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10 acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State.

No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil.

TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for lonely or quickly paying investments, cannot do better than purchase here. For further information refer to

(Continued from page 373.)

Napa.

A MOUNTAIN RANCH.—St. Helena Star: C. J. Beerstecher's place is situated about three miles south of Rutherford. He has two large cellars, containing some 18,000 gallons of the choicest wines. He informs us that he has a direct market in San Francisco, and gets as high as 65 cents for some of it. His residence commands a beautiful view of the valley below. After partaking of an excellent dinner, we were escorted over the different parts of the large ranch. Mr. B. has some 500 acres in all, 100 acres being set to the choicest varieties of vines. He has also some thousand choice fruit, olive and nut trees, most of which are now in bearing, and quite a number of bushes and vines in a thrifty condition. We were finally taken to a point on the hill, thickly wooded with oaks, whence we could obtain a most excellent view of the valley from Yountville to Mr. Krug's. The grandeur of the view really baffles description. He has all his land divided off and fenced in, and quite a band of stock roaming over his pastures. Mr. Beerstecher's place is at an altitude of some 1200 feet, and he informs us that he is never troubled by frost. During his seven years' residence he has greatly improved his ranch and is now very proud—as well he should be—of his beautiful domain.

JAPANESE BUYING LIVE STOCK.—Napa Register, April 20: B. Hirose, S. Koike and Juro Kobayashi, representatives of a stock-farm in Japan, were in this valley last week. The first named is a graduate of the Veterinary Department of the University of Japan. He speaks English and German fluently. All three are young men, well dressed and polished in manners. They are visiting this country with a view of buying horses, cattle and other livestock, for the purpose of improving the Japanese breeds. At F. W. Loeber's stock farm, near St. Helena, they found some horses they may buy and take back with them. First, however, they will visit Kentucky and several of the Eastern States. Sunday they took in the stock-farms near Napa, and looked over the asylum. They have letters of introduction from the U. S. Consul to Sen. Stanford.

Placer.

ORANGE TREES ALL RIGHT.—Auburn Herald, April 21: A large proportion of the orange trees that were apparently killed by the severe cold weather last winter are putting forth their buds and leaves, and in a few months only a critical observer would suspect that they had ever been touched by frost. The fruitmen were scared, and believed that the days of orange-growing were over, that the climate was too severe, and were ready to set out hardier trees. They were scared by the frost of last year, but never in the history of Placer was more and better fruit, of all kinds, than in the year 1887. There is no question that large portions of the county are not adapted to the orange, but we believe that there are other portions that are specially fitted to produce this glorious fruit. The apple trees suffer from cold in New England occasionally, but that fact doesn't condemn that section as an apple country or deter the farmers from enlarging their orchards.

Sacramento.

ANOTHER CANNERY PROJECTED.—Record Union, April 21: One of the chief objects in forming the Sacramento Improvement Association was the encouragement of new business enterprises, and to that end a committee was appointed on manufactures. This committee has decided to organize a company, to be known as the Sacramento Fruit Packing, Canning and Drying Co. To that end they have secured a refusal for 30 days of the St. Louis Brewery property, corner of Sixth and G streets, for \$8000. It is admirably located, as fruit can be unloaded from cars at the front doors of the warehouse. The lot is 150x160. A two-story brick building, with cemented cellars beneath, extends from G to the alley, 160 feet, is 30 feet in width, in excellent repair, and will need but little changing to adapt it to the business. The buildings on this property cost originally over \$20,000. It contains an engine with capacity sufficient for all power purposes. The property can be purchased by a payment of \$3000 cash, leaving a mortgage of \$5000 thereon for a term of years at a low rate of interest. It is estimated that about \$10,000—exclusive of cost of building—will be required to put up a pack of 10,000 cases, the number proposed for the first year. This will include the cost of machinery. A gentleman experienced in the canning business visited the premises yesterday, and said they were equal to a plant costing \$20,000. The matter will be pushed, so as to be able to commence handling the early fruit.

San Bernardino.

A CITRUS NURSERY IN THE HIGHTS.—Valley Echo: J. W. Keeney's house in Box Spring mountains is about 1000 feet above the East Riverside plain, or fully 2000 feet above the level of the sea. A highly romantic road of his own construction winds up from the base to the summit of the ridge. Once at the summit, you are on the edge of a broad valley, hemmed in by still higher rocky walls rising above you at least 800 feet more. We were amazed to find up here fields and orchards aggregating scarcely less than 80 acres, nearly all under cultivation. The water for house and nursery is piped from a perennial spring 1600 feet away, and

some distance farther off are four more springs of larger capacity—all on Mr. K.'s land. Up here—out of the world, as it were—is a well-cared-for and thrifty nursery of seedling orange trees, numbering about 100,000 plants. The little trees have grown two or three inches since the last warm spell. It must have taken great care and patience to raise this valuable crop of future orchard trees in that secluded spot.

GOOD RETURNS.—Index, April 14: W. R. Ingham, owner of the famous Ingham ranch at Highlands, yesterday heard from his cargo of oranges, recently shipped to Chicago. When they arrived there, they were in the very best preservation and found a ready sale. The seedlings brought \$3.75 and the Navels \$6. Mr. Ingham is delighted with the result of his venture, as the letter acknowledging the receipt of the oranges says they were the best received there this season.

San Diego.

EDITORS PRESS.—The 11th, 12th and 13th were warm days, the thermometer on the 12th registering 102° at 5 A. M., on the 13th 82°, with the tail end of a desert storm just stirring the leaves upon our tallest trees; at 12, noon, the wind changed and blew up cool from the coast. Thus passed off one of those dread storms that are so fatal to the best hopes of the farmer and fruit-raiser. There was not a leaf nor blade of grass injured in Sweetwater. Barley is maturing nicely and will be fit for hay by the 25th. —A. W. O., Sweetwater, April 18th.

HORTICULTURAL SOCIETY.—FAIR MATTERS.—San Diego Union: The annual meeting of the County Horticultural Society was passed, owing to the failure of a quorum to put in an appearance. The next meeting of the society will not be held until July, and the old officers will hold over. They are: Pres., J. M. Asher; V. P., F. H. Heald of Elsinore, W. E. High of San Diego and Chester Gunn of Julian; Sec., Geo. Bower; Entomologist, Frank Blaisdell. The few members that materialized put in the time discussing arrangements for holding an agricultural fair in this city next fall. Mr. Asher stated that committees have canvassed the matter, and there is every prospect that a successful fair will be held. The fair grounds will probably be located in the City Park, near the head of Sixth street. There is a desire, however, to have the fair held this year at a point more conveniently located, and negotiations are in progress to obtain the use of the block near the water front owned by the Government. The fair will probably be given under the auspices of a county agricultural society, soon to be organized, which will include the old Horticultural Association and be quite general in its scope.

THE AGNES LEMON.—San Diego Union, April 19: Several years ago, Frank A. Kimball was given some lemon seed by Sen. John S. Harris of New Orleans, which he planted at National City. The product was a new variety of lemon. They are uniform in size, have a symmetrical tree, fine foliage, and perfectly sweet rind, their spines are few and very small, thereby rendering the fruit less liable to damage by piercing. The texture of the pulp is finer than any other on the coast. Mr. Kimball presented this new lemon at the recent Fruit-Growers' Convention, and asked to have it named. The committee on nomenclature, to which the matter was referred, christened the fruit the "Agnes lemon," the name of Sen. Harris' wife.

San Luis Obispo.

AGRICULTURAL ASSOCIATION No. 16.—S. L. O. Tribune, April 20: A meeting of the Association was held April 7th, E. W. Steele, presiding. Present—Steele, Warden, Hollister, Van Gorden and Orcutt; absent—Murphy, Webster and Leedham. The statement of accounts for the fair showed a balance of \$593.54. Ordered that \$60 be paid the secretary for services, and the balance of money on hand be paid to the S. L. O. Co. Park Association for use of their grounds. Election of officers for the ensuing year was held with the following result: Pres., E. W. Steele; V. P., L. M. Warden; Sec., J. H. Barrett; Treas., R. E. Jack. Membership fee for present year fixed at \$5, covering admission to fair, grounds and pavilion. Ordered that fair be held Sept. 25th to 29th inclusive.

Santa Barbara.

TREES AND VINES PLANTED.—Santa Maria Times, April 18: Over 100,000 trees have been sold to the farmers of this valley this season. A Times reporter called on Jones, Mauley & Co. to ascertain the amount of these sales for the present season, which are about as follows: [Fourteen firms and individuals are named, whose combined purchases amount to 66,915.—Eds. Press.] Miscellaneous small orders about 15,000. The above sales simply represent the work of one agency of the Garey nursery in Los Angeles county. Some miscellaneous orders, sold to parties direct from other nurseries, are: Jos. Kaiser, 6300; A. Weiheimer, 3300; Capt. Williams, 3000; Mr. Teitson, 1500. Orders ranging from 50 to 500 trees through other agencies will swell the list of sales made in this valley during this past winter to at least 115,000. Besides the heavy sales of fruit trees there have been at least 50,000 vines planted out. This has been a most prosperous year for tree-planting in Santa Maria valley, and the acreage would have been much larger had the nurseries been able to supply the demand.

FAIR MEETING.—At a meeting of the Santa Maria Agricultural Society, Saturday, there was a good attendance and the usual business

was gone through with. It was the sense of the meeting that our next annual fair should be some time between the first and middle of October. Adjourned to meet on the 5th day of May at McMillan's hall, at 2 o'clock.

Santa Cruz.

FARMERS' UNION.—Santa Cruz Sentinel, April 14: At a meeting of the directors of the Farmers' Union of this city on Monday last, 595 more shares of its capital stock were sold, making a total of 1029 shares of paid-up stock, representing a capital of \$51,450 which has thus far been disposed of. The stock is held by about 25 different persons.

BEST SEEDING.—Pajaronian, April 19: Farmers are making splendid progress in putting in their beet-seed, and considerably more than half of the acreage contracted has been seeded. It is expected that seeding will be finished early in the coming month. The work was greatly aided by many farmers using their grain drills, thus preventing delay in waiting for the factory drills.

Solano.

EDITORS PRESS.—The chief question here now is: Have you sold your apricots? Several buyers have been up here the week past, and succeeded in buying a few at two cents per pound. I hear of one offer of three cents that was refused. One lot of peaches was sold at 1½ cents per pound, peaches to measure 2½ inches. Cherries are coming in, but the crop will be very light, especially Black Tartarians, of which there are scarcely any. ... A large crowd was in attendance last Saturday at the land sale of the Butcher farm, belonging to Mrs. Buckingham, and sold by Easton & Eldridge, auctioneers. The tract comprises 900 acres, and was bought about one year ago for \$90,000. About two-thirds of the land was sold, and is said to have paid for the whole tract. Prices ranged from \$240 to \$550 per acre, according to the improvements on it. ... Several who have driers here will not run them this season. They say they can get just as much for sun-dried fruit, and can dry it much cheaper in the sun, and just as well, unless it is late peaches or prunes. There will be but little, if any, fruit peeled with lye here this season. ... The days are very warm, but the nights cool, with heavy dew. The dew will help out the hay crop, which will be short until some more rain comes soon. —G., Vacaville, April 22d.

FRUIT GROWERS ORGANIZE.—Suisun Republican, April 20: The fruit-growers of the valley met Wednesday and discussed questions of interest. They meet again Saturday week, the 28th. The agreement below was signed by all present; more signers are wanted. "We, the undersigned, fruit-growers of Suisun valley and vicinity, hereby organize ourselves into a Bureau of Information for the purpose of procuring information relative to the fruit industry of this section and to extend to the members such information." C. B. Elliot, G. P. Plaisted, J. W. Rams, J. M. Baldwin, L. B. Abernathie, W. H. Morrison, Dave Hale, G. H. Pangburn, C. E. Barnes, F. C. Chadbourn, Wm. Stewart, John Malchi, J. Danielson, J. W. Bauman, W. C. Davison.

Sutter.

SUTTER COUNTY HORTICULTURAL SOCIETY.—Farmer, April 20: There was a good attendance at the meeting of the society, held in the Supervisors' room last Wednesday. C. C. Newkom asked for information in regard to rust on blackberry vines. P. L. Bance stated that he thought it was caused by heat. Had noticed the same thing on alfalfa. Mr. Newkom stated that it was to be found only on the under side of the leaves. If later in the season, Mr. Kells thought it might be caused by red spider, and advised the use of sulphur. He did not think that it was absolutely necessary to put the sulphur on the leaves, as the sun would cause the fumes of the sulphur to rise and affect the leaves in the desired manner. C. E. Grovenor of Woodstock, New Brunswick, Canada, was introduced. J. C. Gray, Henry Everett, J. W. Mills, W. H. Campbell, G. W. Carpenter and Joseph Phillips were added to the membership. The subject of cultivation of orchards and vineyards came up for consideration. It seemed to be the general impression that land should be plowed early—about Feb. 1st. Land should not be plowed too deep—from three to five inches being enough, next to the trees. Be careful not to plow when the land is too wet. Ground should be cultivated as long as there is any prospect of rain or any weeds may grow. Our limited space prevents our giving a full account of this discussion, which was very valuable.

A TURKEY ROUTS A BULL.—Marysville Appeal: A very novel combat was witnessed on the Marcuses' ranch in Sutter county last Sunday. A young bull discovered a turkey on her nest in a straw-stack, and took apparent delight in causing her discomfort by shaking the straw under her until she and the nest fell to the ground. This made Mrs. Gobbler mad, and she went for the bull in a rage. She jumped on his head, pecked at his eyes, and scratched, until the bull, who showed fight at first, ran away. The turkey followed, pecking his sides in the flight, and, returning, rearranged her nest, satisfied that she would not be troubled again.

Tulare.

DOSING GOPHERS.—Vernalia Times: I. H. Thomas uses the raisin grape and strychnine to poison the gophers that infest his nursery, and with great success. He punctures the raisin and then fills the cavity with powdered strychnine.

nine, afterward placing it in the runway of the gopher. Lately he has secured a new plan, which he intends testing to-morrow. Following is the receipt: Take any old can that will hold 2½ gallons of water, and place in it a stick of phosphorus and a little cold water. Then pour in hot water, which has not reached the boiling point, and stir with a stick until the can is full, being careful to see that the water is hot enough to melt the phosphorus gradually. When melted, add two pounds of sugar, meanwhile stirring the liquid, and after the sugar is melted, thicken to a stiff batter with cornmeal and flour, half and half. Now add wheat, and stir until stiff. While adding the wheat, add also 15 to 20 drops of the oil of rhodium. Set away in a cool place and the mass will become quite hard, when small pieces can be chipped off and placed in the runways of the animals with no uncertain result.

Yolo.

SUMMER IRRIGATION.—Woodland Democrat, April 19: Passing R. B. Blowers' place the other day with a party of friends, we were attracted by the silvery flow of limpid water over the brim of the large stone receiver, and stopped to see the working of the great pump. Mr. Blowers informed us that this was the beginning of summer irrigation. His pump throws a stream of 25,000 gallons a minute, and the supply in his well seems inexhaustible.

Yuba.

EDITORS PRESS.—It is very warm and dry. I notice some of the farmers are turning their stock on their grain as though they gave it up. Rain must get along soon to save the grain-growers. Apples, with the aphid at the roots, borers in the trunk, and codlin moth in the fruit, are an uncertain crop this year. Should orchardists continue to grub up their trees as in the past two years, the apple will be the greatest delicacy in the fruit line. Peaches will be a big crop, and require thinning on the young trees. Cherries and pears about average; ditto, plums and prunes. Apricots are good on young trees; old trees almost bare—some dropping. Will be very fine—the few on the trees—and large, but a short crop. —E. H. S., Marysville, April 19, 1888.

ARIZONA.

BARLEY HAY.—Phoenix Herald, April 19: Mr. E. W. Wiley began cutting barley hay on the second day of April from his new land under the Arizona canal, and realized two tons to the acre of the finest kind of hay. He is now irrigating the land and will have a second crop, without sowing; in fact, the new crop is already up six inches on portions of land first mown.

NEVADA.

WILD HORSES IN NEVADA.—Walker Lake Bulletin: As long as can be remembered by the oldest settler, bands of unclaimed horses have been on the ranges in different sections of this State. They are the cause of considerable annoyance to those who have horses pasturing in the hills, as they will not feed with the tame ones, but run them off the ranges, sometimes to so great a distance that the owners are unable ever to find them. They will also "steal" tame horses from different bands and keep them away for a long time, or until the domesticated animal has a fascination for a wild life and joins the band of "thieves," as they are commonly called.

OREGON.

SOUTHERN OREGON FRUIT OUTLOOK.—Oregonian, April 20: Mr. H. E. Battin of the commission firm of H. E. Battin & Co. has returned from a flying trip as far south as Medford. He reports the outlook for a large crop of fruit throughout the entire State very flattering. He finds that this county, in this respect, is both as early and promising as any of the more southern counties. The acreage of apple orchards in Jackson county has been greatly increased during the past winter, and the people in Douglas are turning their main attention to the cultivation of prunes, in the growth of which that section excels.

WASHINGTON TERRITORY.

GRAIN PROSPECTS.—Oregonian, April 13: Hon. Philip Ritz of Walla Walla was questioned Tuesday about the outlook for grain in the Columbia river basin. Mr. Ritz said the grain prospects of the Inland Empire are good. A very large area of the ground sowed last fall froze out during the winter on account of the severe cold weather, when there was no snow on the ground. Most of this has been replowed and sowed again during the spring months, but some of the farmers could not quite get around to all of it, so some was not resown and some of it was sown rather late and does not look very favorable. The cold, dry, backward spring is still holding the crop back, but there is plenty of time for rain yet; and the longer the rain holds off the more we will get when it comes, and the more good it will do later in the spring when the weather is warmer. On the whole, there is no occasion for alarm. In the great Palouse country nine tenths of the grain is put in in the spring, so there will be very little loss from freezing out, and in the Palouse country there will be the greatest increase of acreage. Taking it all in all, it now seems as if there might be 10 per cent less grain for shipping this year than there was last; and yet a month later these figures may want to be changed from 5 to 10 per cent either way.

TULARE, CAL., April 8, 1888.

PACIFIC MANUFACTURING CO., San Francisco, Cal.

Gentlemen: In November, 1886, I bought a Cyclone of your agent. It has been running now eighteen months, and I was so well pleased with it that I bought, of your agent at Visalia, another, and in its place have abandoned a windmill and a horse power that cost me \$150, and it does its work well. Now when I go away from home I do not have to leave a man to pump water for my stock, for with the Cyclone Mill I have plenty of water. In the eighteen months I have had the other, I have never expended one farthing for repairs.

A neighbor of mine has been getting a Cyclone; has had it about a month. I was going by and he hailed me and said "Ingham, I have got to take down my Cyclone." I said: "Newell, why?" He said it had pumped too much water around his place; that he had the malaria. I think that is a good one.

(Copy.)

Yours truly,

S. S. INGHAM.

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

EASILY OPERATED.

Anti-Poverty Plans.

EDITORS PRESS:—Our Government is rightly spoken of as paternal. A father is quite apt to favor his brightest sons of whom he is proud, while the mother often lavishes the wealth of her affection upon the most unlovely and wayward of her flock. Then, too, she sees the first beginnings of evil with anxiety. That Harry is out late at night, and Joe grows impertinent. But the father scoffs at her fears, says "boys will be boys—let them sow their wild oats," etc. When, however, he finds they are ruining his credit and defying his authority, he sternly lays on the rod.

We need more of the mother spirit in our Government. Having allowed giant wrongs to go so long unchecked, it is now time for Uncle Sam to call his boys to account and lay down the law to them in no uncertain words. Make them understand that individual liberty does not mean the right to rob and trample on the weak.

If among the causes of want and crime we find the consumption of intoxicating liquors to be one of the largest factors—and this is so well proven all must admit it—let us first consider this evil.

We make laws that say, "Thou shalt not kill." "Thou shalt not steal." Every one sees the justice and necessity for this; but, strange to say, many good people do not fear the alcohol fiend, who transfers more property without giving equivalent than all the thieves working in chain-gang or prison. Who takes more lives than have all those who swing from gallows, should not be prohibited, only restricted. The popular plan for this, high license, is about as wise and efficient as would be a plan gravely proposed to me by a tramp philosopher:

"Whisky should sell at 50 cents a glass, then the workman could not buy enough to hurt himself."

In view of the constant interference of Government with private rights for public good, the personal liberty plea is lame indeed. And now since prohibition has been decided constitutional by the Supreme Court, I see nothing left except self-interest, from the farmer seeking a market for his grapes and barley to the rum-seller and his chief partner, our paternal Government.

All other means to check intemperance have been tried with little or no effect; the sovereign remedy can only be found in the prohibition of the manufacture and sale of the poison.

Once this upas tree cut down, many other evils that have thriven under its shade will wither and die. Many virtues almost choked out revive and grow. Fancy loves to paint the pleasing change.

From how many homes the specter of want and fear will be at once banished?

Children dance with joy, as wholesome food in plenty, good clothes and nice furniture are carried into homes long the abode of want and wretchedness.

Aged parents are coming home from almshouses with tears of joy, to be cared for by their now reformed and dutiful sons. Tramps are buying land and building homes. Police force is reduced, jails and prisons are thinning out, while under a new demand for all the comforts of life, every business is booming. There is work for all, bread for all.

But you say, "There will still be vice, ignorance, laziness, and want." True, probably there always will be, and the dire effects of the liquor traffic will still be felt for one generation, at least; but the vastly lessened amount we can now meet with courage. Never in the history of the world were there so many well-organized, well-supported charitable institutions for the relief and uplifting of every class of unfortunate fellow-beings. So many loving hearts, who, like the little girl, do "want a heathen so bad," I almost fear the heathen won't go around.

As prevention is cheaper as well as infinitely better than cure, we should consider the children more. The money formerly spent in the punishment and repression of crime, and the charity bestowed upon adult, needy objects, would go far toward the better education of all our future citizens, red, white and black.

Our need is not more colleges of higher learning—not more tall church spires—but more first principles of work and right thinking; more industrial schools, where the young can acquire the skill necessary for self-support; more plain churches where the simple gospel of the Golden Rule is preached to the poor.

Bring out from the evil influences of the city its street arabs and homeless waifs to cheap or Government lands. We have plenty suitable in California with an unapproachable climate thrown in. Place them in commodious cottage homes, some 20 to 40, under the fostering care of some wise and loving soul. Here let them cut down and grub up the brush, dig, and plant, and reap. Have tools and shops for learning the simple beginnings of trades, any who showed especial skill to be advanced to higher industrial training schools, while those bright in lessons should have better opportunities in that direction. The seemingly incorrigible should be placed in separate homes under wise disciplinarians. Plain food, plenty of work, learning to love nature and honest toil, these are as nearly as possible the conditions for rearing useful, happy citizens, and such, I have no doubt, the greater part would prove to be.

Mrs. J. M. K.

Hand in Hand, Etc.

EDITORS PRESS:—In a report of the proceedings of the recent Viticultural Convention I find the following as a quotation from a paper read by one of the members: "The experience of the world demonstrates that where pure, light fermented beverages, such as wine and beer, are produced plentifully, and distributed at prices within the reach of the poorest classes of the people, there, even without any legislative control or restriction, except such as is imposed by a high taxation upon distilled spirits, the least intemperance is observed. It is to be understood, however, that we mean wine used rationally as a part of regular meals, and not wine used as a tippie, or as an accompaniment of other tipples. Wine and beer, hand in hand, may preach a temperance reform, provided that their friends do not shrink from their responsibilities as citizens in applying all legitimate remedies for popular habits of intemperance caused by other agencies and irrational customs." In reading such a report of "the world's experience," some would like to know when and where such "experience" occurred.

The remark that "Wine and beer, hand in hand, may preach a temperance reform," under certain conditions, reminds me that they are preaching reform very effectually without those conditions. In 1830 beer preached a powerful sermon, resulting in a great revival in England. A removal of restrictions from the stronger drinks had brought an increase of drunkenness, and as a reformatory measure it was proposed to so remove the restriction from beer as to bring it within easy reach of all. Beer was a

GEO. ERTEL.

favorite English drink, and the measure was favored by laborers and lords, the press and the clergy, and the bill passed by acclamation. The Duke of Wellington, on its passage, proclaimed it a greater achievement than any of his military victories. Lord Brougham said that under the circumstances it was giving the people what "might be called a moral species of beverage." Two weeks after its passage, Rev. Sydney Smith wrote: "The new Beer bill has begun its operations. Everybody is drunk. Those who are not singing are sprawling. The sovereign people are in a beastly state." One editor spoke of its effects as "exceeding the evils of any single act of internal administration passed within the memory of man."

In France, wine has been exercising its reformatory influence till the governing power has become alarmed at the increase of drunkenness and ordered an investigating commission. But these unfortunate results may have come from not using wine "rationally as a part of regular meals and not as a tippie." It may be pertinent here to inquire wherein other drinks would do more harm than wine, if used "rationally," as aforesaid, and under the application "of all legitimate remedies for popular habits of intemperance," as required for wine.

Does not wine, like other intoxicants, uniformly incline men to "shrink from their responsibilities as citizens in applying all legitimate remedies for popular habits of intemperance"? If wine requires such restrictive accompaniments, the favorable results come of the restriction and not of the wine. Does not wine under such restrictions "preach" stronger for restriction than for wine, and teach that it would be better to drop wine out of the formula and take restriction "straight"?
Pascetta, March 24, 1888. M. WILCOX.

IRRIGATING ENTERPRISE IN COLORADO—The Montezuma irrigating tunnel, just finished in Colorado, is upward of a mile in length, running under a mountain, and with 50 miles of canal, will convey water from the Dolores river over 200,000 acres of the richest agricultural valley in the State.

George Ertel.

The lives of men who have won success by honorable means are full of interest; and we may get valuable lessons from the careers of those who have started at the bottom and reached the top by virtue of intelligence, honest industry and strength of character. Among such is Geo. Ertel of Quincy, Ill., whose likeness we present upon this page. Mr. Ertel is not only one of the foremost business men and respected citizens of the place where he resides, but is widely known as the senior member of the firm of George Ertel & Co., the fame of whose baling presses has gone into foreign countries.

He was born April 10, 1830, at Neuburg-on-the-Rhine, Germany. Like so many of our successful men, he spent his boyhood on a farm. At the age of 13 he was apprenticed to a cabinet-maker, and this occupation he followed in the land of his birth until 1854, when he immigrated to this country. Having worked two years in New York and Pennsylvania, he followed the course of empire and for a time resided in Quincy, and later in Liberty, a town near by. In 1868 he returned to Quincy, where he has resided ever since and been persistently engaged in the improvement of his presses, the manufacture of which has steadily increased. In 1879 came the Ertel Economy Press, in 1882 the Farmers' Friend, in 1884 the Clipper Perpetual Baling Press, and in 1886 the Ertel Victor, in which, seemingly, no place for improvement can be found. The Economy and Victor only are now manufactured, and the demand for them tries to the utmost the capacity of the large works, although they are furnished

Scale Bug—Killed at Last.

UNIVERSITY OF CALIFORNIA,
COLLEGE OF AGRICULTURE,
BERKELEY, April 7, 1888.)

The Ongerth Grafting Compound Co., San Francisco: I take pleasure in stating that, both in my personal experience and in the somewhat extended trial it has had in the University orchard, your Insecticide Wash has proved very efficacious. When properly applied, it seems not only to kill quickly all living scale insects occurring here—I have had no experience with the white, or cottony scale—but, by its staying quality and continued action, to destroy many eggs that resist even strong alkali washes. I have also had extremely favorable accounts of its wide efficacy, from outside parties, in whose reliability I place full confidence.

Very respectfully, E. W. HILGARD.

The above Ongerth's Liquid Tree Protector for sale by Woodin & Little, 509 and 511 Market Street, San Francisco, Cal. Send for special circulars and prices, on sample can.

A Rare Chance.

The Gabilan Rancho, situated in Monterey county, containing 7665 acres, is offered at \$36.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness avenue, San Francisco.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

Carriages.

SAN FRANCISCO. } SAN FRANCISCO.

—SOLE AGENTS FOR—

SPRINGFIELD BUCKEYE HAY RAKES.

A 1, SPRINGFIELD BUCKEYE DROP TOOTH RAKE,

As shown in cut, has 20 teeth securely fastened to the axle. The teeth are long and heavy enough, and have sufficient curve to allow them to carry a larger amount of hay than other rakes. Is simple in construction, strong and durable. Has no cog wheels or ratchets to get out of order. Has high wheels and wrought iron spindles. The teeth are adjustable, and made of the best spring steel with oil temper, all carefully tested.

This is practically a SELF-DUMP RAKE, with out cog wheels or ratchet. The tooth bar or axle is so constructed that when the lock is thrown off with the foot, the draft is transferred from the center to the top of the axle, so that the weight of the driver, the pressure of the hay against the teeth and the draft of the horse will instantly dump the load without the aid of the Hand Lever. Being a LOCK LEVER, the hay can be carried along and deposited just where wanted, and then with pressure of the foot upon another lever, slightly aided by the Hand Lever, the teeth are thrown back into position and locked. It has an adjustable SWINGING CLEANER BAR of approved style, which has proved to be very efficient and desirable. The SEAT is made adjustable in height.

A 2, SPRINGFIELD BUCKEYE COIL TOOTH RAKE

Contains all the principal features of the A 1 Rake. Has 20 teeth with a double coil. The teeth are fastened rigidly in the tooth-bar, but can be adjusted as to height from the ground. Made of the best spring steel, oil tempered and carefully tested.

Some persons prefer a coil tooth rake. To such we would recommend the Springfield Buckeye A 2.

A 3, SPRINGFIELD BUCKEYE SPIRAL SPRING RAKE.

This Rake has 20 teeth, and is constructed just like A 1, with the addition of a coil spring over each tooth. We do not regard the coil spring as actually necessary, yet many persons prefer the spring, and we are disposed to furnish just what our customers want when practicable; hence we make these different styles. This is a first-class Rake in all respects, and to be appreciated needs only to be seen.

JUMBO 12-foot, 2-horse Rake with 28 drop teeth, Price with Wood Wheels, \$40; with Steel Wheels, \$45.

PRICE LIST OF BUCKEYE HAY RAKES:

A 1, with 20 Drop Teeth and Wood Wheels.....	\$27 50	A 3, with 20 Drop Teeth with Spiral Springs and Steel Wheels.....	\$35 00

FLORICULTURE.

The Los Angeles Flower Festival.

[Written for the RURAL PRESS by CLARA S. BROWN.]

Again the season has arrived for the crowning social event of the year in this "Queen City of the Angels," and again has an unequalled success been scored, and a scene of marvelous loveliness been presented to an admiring public by the efforts of a band of energetic, philanthropic women.

The opening of the Fourth Annual Flower Festival took place Tuesday evening, in Hazard's pavilion, a structure of most generous proportions on the corner of Fifth and Olive streets. There has been almost a surfeit of entertainments in the city this spring, an unusual number of celebrities having visited Los Angeles, in addition to a succession of "lesser lights" in opera, drama, concerts and lectures. Yet as the writer wended her way last evening from a street car to the brilliantly lighted pavilion, preceded and followed by a throng of men, women and children, some one was heard to remark: "That building won't hold all the people to-night!"

The floor of the main room, 120x166 feet in dimensions, was crowded in all the spaces available between the booths, and the two wide galleries were equally filled with the fortunate ones who had obtained seats from which to gaze comfortably down at the jostling mass of humanity and the bewildering profusion of floral designs which made it easy to believe that a scene of the fairy kingdom had been magically transported to this work-a-day world.

It is impossible to adequately describe a flower fete of such noble proportions. Language seems poverty-stricken in the presence of this grand demonstration of nature's wealth, and only the eye-witness can realize how much it is possible to do with the blossoms that thrive so wonderfully on our genial coast, and shed their fragrance on rich and poor, in summer and winter, in a manner that would seem heaven-sent, indeed, were it vouchsafed to the dwellers of all classes in the more inclement Eastern States.

The extraordinarily cold weather of December and January, while it retarded the growth and blooming of calla lilies and other tender plants, did no serious damage and has not apparently lessened the supply from which is to be drawn the immense number of flowers that will be used during this week and next at the pavilion. The quantity on exhibition at the opening was almost incalculable, yet every day all the drooping ones will be replaced by fresh specimens. The labor involved in successfully managing an affair of this nature in all its details is very great and almost wholly performed by the ladies of the Flower Festival Society.

The large stage was converted into a woodland scene and occupied by distinguished residents and visitors, among whom were General John C. Fremont, General Nelson A. Miles and staff, Brigadier-General John R. Mathews and staff, the president of the Board of Trade, Mayor Workman and ex-Mayor Spence, members of the Board of Education, and of the legal and medical professions in the city, Thomas Nast, the world-famous caricaturist, etc.

After the opening address of the Mayor, short speeches were made by Generals Fremont and Miles, but, owing to the throng of moving people, none of the remarks could be heard a few feet away from the stage. Los Angeles people were, however, well pleased to look at these eminent soldiers and observe their approval of the brilliant scene before them. The effect was considerably augmented by the rich and showy uniforms of the military, whose headquarters were last year removed from Arizona to this city.

The rose exhibit occupies the center of the hall. Two years ago it was an immense bank of blossoms; last year it was a circular bed inclosing a fountain and pool; this time it is in the form of a Moorish pavilion, octagonal, and 15 feet in diameter. At the entrance is placed a gilt turnstile. A pole in the center rises 24 feet above the roof, wound with evergreens, and from the top are stretched garlands of roses to the points of the roof, each garland tied with ribbons corresponding in color with the roses used. Gazing up to the arched ceiling, 57 feet in height, one sees between each arch a great red clover leaf, rimmed with green, and on the sides of the building three silver crescents are grouped around each clover leaf. Ropes of evergreen are netted backward and forward like a spider web of gigantic threads. Returning to the rose booth, silver cords, at the first glance unnoticed, are seen tied irregularly to the garlands above the roof, further simulating the spider web. The walls and pillars of the booth are studded and twined with choice specimens of the "Queen of Flowers," while within are massed thousands more. In the hurry of the opening they were not classified last evening, but to-day they will all be labeled. The occupants of this booth wore their hair à la Pompadour and powdered. (*En passant*, the costumes of the attendants at all the booths harmonized perfectly with the lovely scene, being very rich and delicate, in some cases a "symphony" of color, made especially for the occasion.)

Turning from the central figure, what is this towering object at the left, a wondrous creation of calla lilies and marguerites, rising from the roof of some fairy grotto? It is the exhibit of

the town of Long Beach—a lighthouse 25 feet high, with windows of scarlet geranium, and a balcony made of dark-red flowers. At the top is an incandescent electric light surrounded by a revolving glass of different colors. The pedestal is made of gray moss, lichens, seaweed, etc., and amid shells and flowers stand a bevy of Long Beach ladies, smiling upon the crowd about them.

It would seem that this little hamlet by the sea has a fair prospect of winning one of the prizes offered to outside towns; \$200 will be awarded for the best-kept booth, and \$175 for the second best; \$100 for the most original design; and \$75 for the next in favor.

Equally conspicuous is the exhibit of Alhambra—a rapidly growing settlement in the San Gabriel valley. It represents the ruins of the Alhambra palace in Spain, as described by Washington Irving. There is the ruined front of the palace, the tower, the arches, the Spanish garden, with its tropical foliage, all surrounded by a low fence covered with English ivy. In the construction of this artistic design, great numbers of roses, daisies, geraniums, verbenas, marigolds, orange and lemon blossoms, wild flowers, ivies, etc., have been used.

San Fernando, an old but small town in the midst of a famous wheat country, is not to be outdone, and furnishes a Moorish temple, the chief feature of which is a correct representation of the mammoth submerged dam of Paicoima, recently completed, which provides the water-supply of the San Fernando valley. Most of the decorations of this booth are in wild flowers.

A very showy booth is inscribed "California, the Golden State," and is presided over by native-born ladies. Only yellow flowers are used here, and the costumes are all yellow; even yellow wigs are worn. The effect is striking. In front of the booth hangs the American eagle, with wings outstretched, made of marigolds, marguerites, and sea-moss. The California bear is present, of course, made of marigolds. The pillars are twined with branches of acacia in bloom.

In contrast to this gorgeous coloring, is the "Spring" booth, draped in illusion, and with English ivy clinging everywhere upon its snowy background. Delicate spring flowers and fruit-blossoms are daintily arranged here, and the young girls in attendance are clad in white. In front is a rising sun, a large butterfly of pale-yellow flowers, and a scroll of gauze upheld by snowy doves bearing the word "Spring."

A booth is devoted to old-fashioned flowers, and finds no lack of admirers, even where there is so much that is novel and rare. Snowballs, lilacs, single pinks, bachelor's buttons, sweet peas, nasturtiums, petunias, mignonette, mourning bride, poppies, etc., bring to mind the associations of long ago. Above the entrance is a banner made of gunny-sacking, on which is queried: "Should Auld Acquaintance be Forgotten?"

Another booth is decorated entirely with purple and white flowers, the draperies are lilac and white; a lilac-covered sofa within invites the weary to rest, and the ladies in charge are attired in brocades of the two colors.

The lemonade booth has a canopy of yellow tulle, and is supported by six pillars covered with lemon and orange blossoms with their foliage and clusters of the fruit interspersed here and there.

The candy booth is striped with wide bands of red and white geraniums, the pillars covered with the graceful leaves and ruddy berries of the pepper tree.

The soda-water booth is in horseshoe shape, and profusely adorned with calla lilies. At the right of the hall a fountain sends its cooling spray upon a lofty pyramid of calla lilies. Around the pool are placed ferns, more lilies, bunches of azaleas, umbrella grass, etc.

The Inglewood booth is a center of attraction, its presiding genius being Mrs. Jessie Benton Fremont. For a town that has only become a town since it was known that this talented lady and her husband would reside there, and that a large college of applied sciences would soon be erected and handsomely endowed in the immediate vicinity, Inglewood has made a most creditable showing. The arrangement of flowers is very beautiful. Hanging-baskets and colored-glass lanterns depend from the green canopied top, which is surmounted by an immense jar of Banksia roses. Within stands the most generous-sized "loving-cup" ever seen, made of La France roses; and there is a large bell of yellow Banksias, with a tongue of century-plant blossoms.

One of the most beautiful single pieces in the hall is a large ship of roses with rigging of smilax.

As at previous festivals, unique designs will be added from day to day to those present on the opening night, when the utmost care cannot prevent a degree of incompleteness.

There is a boutonniere booth, containing only tropical flowers and foliage; also a bulbous booth, where many rare potted plants are exhibited; a pop-corn booth, embowered in ferns and bridal-wreath; a wedding canopy of ferns and roses, with a large marriage bell of roses, entered for competition by a florist of this city; a newspaper booth, watched over by a very solemn owl; a registry booth, where under a horseshoe of roses, with roses massed all about you as you stand within the circle, you may write your name for five cents, or have the honor of opening a new page for twenty-five cents.

This, with the booth near the main entrance, where the business of the society is transacted, completes the exhibit on the first floor.

The galleries contain several very handsome booths. The ice-cream "parlor" is in the first gallery, and in this case is a Chinese tea-garden. A pink and pansy booth is in the form of a six-pointed diamond. Many varieties of wild flowers are shown in another booth, and in still another "milk-shakes" are compounded among snowballs and marguerites. A geranium booth has a pyramid in the center of red geraniums, eight feet high.

Anaheim and Santa Monica have in this gallery very handsome exhibits, the former containing a ship, a miniature rockery and lake, over one hundred varieties of choice roses, and many other flowers; and the latter representing a rustic summer-house, the pillars wound with barley and oats, the roof thatched with grasses. This booth has a beautiful ship and a wharf of exquisite roses, with the waves of the bay represented by purple and white blossoms.

The Seventh Regiment band of 25 pieces will furnish music each evening, and novel entertainments have been arranged. Over 100 children have been trained for the cantata "Rebellion of the Daisies," and twenty-five little girls will drill with muskets each evening.

The receipts at the opening were \$1850. It is hoped to net \$10,000 during the two weeks of the festival, \$7500 having been cleared last year. The primal object of the society was to establish a boarding-home for young working women in this city. That praiseworthy undertaking has been accomplished, and as the Home is now on a paying basis, a portion of the proceeds of this year's festival will be donated to the Orphan Asylum, which greatly needs more commodious quarters.

Los Angeles, April 23, 1888.

Shorthorns from Illinois.

The announcements of sales of fine cattle continue. The latest news we have to give is the coming of a choice herd of fashionably-bred Shorthorns, 40 females and 10 young bulls, from the breeding farms of R. M. Dunlap, Galesburg, and J. S. Latimer & Sons, Abingdon, Illinois. The animals belong to the Rose of Sharon, Young Mary, Bloom, Miss Wiley, Acorn, Pearllet and other useful and fashionable families. The cattle will arrive in Sacramento and be on exhibition at the grounds of the State Agricultural Society after May 5th, and the sale will take place May 17th, at 1 P. M. Catalogues can be had by addressing Dunlap & Latimer, Sacramento. Our readers will remember that a previous importation of cattle to California by Mr. Dunlap sold well, and it will be important for those desiring stock to see what is now to be offered.

FRUIT AND VEGETABLE SHIPPERS' MANUAL.—We have received a copy of a pamphlet of 100 pages entitled: "Southern Fruit and Vegetable Shippers' Guide and Manual—What to Grow for Northern Markets, How to Pack, Ship, etc." It is published by P. M. Kiely, a commission merchant at 914 North Third street, St. Louis, and is sent on receipt of three cents to pay postage. Though intended, as stated, chiefly for growers in the Southern States, it will be read with much interest by California producers.

It is said J. B. Haggin is preparing to retire from the turf, and will sell his yearling stock in New York in June. This resident of San Francisco is now the owner of the largest racing establishment in the world.

FERTILIZE!**FERTILIZE!****NITROGENOUS SUPERPHOSPHATE.**

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KORBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,

DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

Dr. J. KORBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 25, 1888.

The past week has been characterized by freer trading in farm products, both spot and futures (particulars of which are given below) than at any time this year. Continued dry weather causes much uneasiness, but as usual, while well grounded they are unduly exaggerated, and consequently extreme reports should not be accepted as correct. Fruits and vegetables are making a better showing, while for them the crop prospects are all that can be desired. The European and Eastern wheat markets have ruled strong and fairly active throughout the week. The following is to-day's cable:

LIVERPOOL, April 25.—Wheat—Rather easier. California spot lots, 68¢ to 69¢; off coast, 33¢ 6d; just shipped, 33¢ 6d; nearly due, 33¢ 6d; cargoes off coast and on passage, turn dearer; French country markets, generally dearer; wheat and flour in Paris, quiet; wheat on passage to Continent, 370,000 qrs.; wheat and flour on passage to U. K., 2,148,000 qrs.

Foreign Review.

LONDON, April 23.—The *Mark Lane Express*, in its weekly review of the grain trade, says: "The supply of the native grain has materially slackened. The country markets during the week were firm, and sometimes there was an advance of from 6d to 1s."

Foreign wheat was quiet and steady. The Russian ports are mostly open, with free sellers. The markets, however, are sensitive. The receipts were small and stocks were very moderate.

The off the coast market was liberally supplied; 25 cargoes arrived, 7 were sold, 5 withdrawn, 5 remain for orders and 11 are on sale, including 5 California cargoes.

The oat trade was quiet. Stocks are low, but there are large quantities in the Baltic ports awaiting shipment.

To-day wheat was firmer. English and some foreign sorts were 6d higher. Flour was 3d higher. Malt barley was steady; common kinds were easier. Common oats were from 3¢ to 6d lower.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Date.	Cash.	April.	May.	June.	July.
19.....	94	91	94	94	93
20.....	96	93	93	92	92
21.....	96	94	94	93	93
22.....	96	94	94	93	93
23.....	96	94	93	93	93

The closing prices for wheat have been as follows, at Chicago.

Date.	Cash.	April.	May.	June.	July.
19.....	79	81	81	82	84
20.....	79	80	81	82	84
21.....	80	81	81	82	84
22.....	81	81	81	82	84
23.....	81	81	81	82	84

CHICAGO, April 25.—Wheat—Firm; cash, 81¢; May, 81½¢; June, 82¢; corn, firm; cash, 54¢; May, 54½¢; June, 54½¢. Oats, firm; May, 32½¢.

NEW YORK, April 25.—Wheat—95½¢ for cash, 94½¢ for April, 93½¢ to 93¢ for May, 92½¢ to 92¢ for June, 92½¢ to 92¢ for July and 91¢ for August.

California Products in Chicago.

CHICAGO, April 21.—On account of the increased receipts of oranges from California, the market has declined. The demand is fair for choice fruit. Following are the quotations: California Riverside oranges, 128 and 226, \$3.25 to \$3.50; do other sizes, \$2.75 to \$3; do other oranges, seedlings, \$2.75 to \$3; Riverside Navel, \$5 to \$6; do others, \$3.50 to \$4.25. California lemons, slow, \$1 to \$2 box.

California dried fruits are quiet. A good many plums and prunes remain, and they are rather dull. Apricots, peaches and raisins rule steady. Of the first named description the supply has become light. We quote: Apricots, sun-dried, ½ lb, 10½ to 11½¢; bleached, prime do, 13¢; do, choice, 14½ to 15¢; do, fancy, 15 to 16¢; evaporated, choice to fair, 14½ to 16¢; peaches, sun-dried, ½ lb, 11 to 12¢; do evaporated, unpeeled, 13 to 15¢; do, peeled, 20 to 22¢; plums, unpitted, ½ lb, 6 to 9¢; do pitted, 10½ to 12¢; prunes, small, ½ lb, 6 to 8¢; fancy, large, 10 to 12¢. Raisins, loose Muscatels, 2-crown, ½ box, \$1.35 to \$1.45; do 3-crown, ½ box, \$1.50 to \$1.65; do London layers, ½ box, \$2.25 to \$2.40.

A few choice hops are selling, at the same time the demand is limited and the market rules dull, with common qualities almost entirely neglected. Pacific Coast, choice, 12 to 13¢ ½ lb; common to prime, 9 to 11¢.

Beans are rather dull at present, and sales drag slowly; there are not many domestic beans offered, but of foreign stock the supply is quite liberal.

Quotations for new California cabbage, \$3 to \$3.50 ½ crate, but some in poor order is offered at 3 to 3½¢ ½ lb.

Weather and Crops.

WASHINGTON, April 22.—The weekly weather crop report says among other things: Reports from Northern States indicate that the week has been unusually cold, and farm-work has been greatly retarded. Reports from Southern States show that the weather during the week affected all crops favorably. Cotton planting is progressing rapidly, and generally throughout the cotton States the week is reported as the most favorable of the season. Slight frosts occurred in North Carolina on the 20th, which may prove injurious to fruit and crops on low ground. In the States south of the Missouri river, including Kansas, Nebraska and Southern Missouri, the weather has been generally favorable and crops are well advanced.

Eastern Wool Markets.

NEW YORK, April 23.—Inactivity and decided weakness appear in all the wool markets. With the new clip just at hand, and the current tariff agitation, manufacturers and dealers are over-confident. The former are buying to satisfy immediate requirements, but no further, while the latter are in a rather

uncertain state of mind as relates to the purchase of supplies in the country. The recent decline in two or three lines has stimulated inquiry, but the general state of things is dull and in buyer's favor. There is a large attendance at the London wool sales, and bidding has increased in animation from the first. Liberal purchases are going forward both for domestic and Continental consumption. Prices are firm throughout the list. At Philadelphia, wool is dull and the market is weaker under increased pressure to sell. The situation is very unsatisfactory to all classes of operators, owing to nearness of new clip and the uncertainty as to future conditions caused by the tariff agitation. The sales foot up 398,000 lbs, as against 332,000 lbs last week and 387,000 lbs for the corresponding week of last year.

Local Markets.

BAGS—The market is somewhat demoralized, owing to bad crop weather and freer outside selling. The pool has been and is still selling in a quiet way through others at less than the quoted rates. Calcuttas for June and July delivery are quoted at 7½ to 7¾¢, and even 8¢.

BARLEY—The spot market holds to strong prices. The demand is free for consumption. On Call, futures are dealt in more freely, with slight but attractive fluctuations. As usual, the large proportion of the sales are reported to be cross-orders. The following are to-day's sales:

Morning Session: Spot—100 tons, 84¢. Buyer season—100 tons, 84½¢; 100, 84½¢; 200, 85¢; 500, 85½¢; 200, 85½¢. Buyer 1888—100 tons, 95½¢; 100, 95½¢; 400, 95½¢; 100, 95½¢; 300, 95½¢; 400, 95½¢; 1000, 96¢; 100, 96¢ ½ c. Afternoon Session: Buyer season—700 tons, 85½¢; 800, 85½¢; 400, 86¢; 200, 85½¢. Buyer 1888—100 tons, 96½¢; 100, 96½¢; 2700, 96½¢; 100, 97¢; 100, 96½¢; 300, 96½¢; 200, 96½¢ ½ c.

BUTTER—The market shows more strength under free buying. Montana, Idaho, Nevada and Puget Sound are large takers. The home demand is free. Considerable is being packed. The quantity packed is about 800 bbls short of last season to date.

CHEESE—The market continues to shade off under liberal receipts and only a fair demand. The closing is weak.

EGGS—The market is weak and demoralized, owing to two firms importing Eastern fighting each other. They are selling all of 3¢ per dozen less than it costs to lay them down.

WHEAT—The market has ruled strong but inactive during the week. On Call, more has been done. Prices have fluctuated some, but not to any great extent. Sales at to-day's Call were as follows:

Morning Session: Buyer 1888—100 tons, \$1.46½; 100, \$1.46½; 400, \$1.47; 400, \$1.47½. Afternoon Session: Spot, season's storage paid—100 tons, \$1.34. Buyer season—100 tons, \$1.34; 100, \$1.35½; 100, \$1.35½. Buyer 1888—100 tons, \$1.47; 100, \$1.47½; 100, \$1.47½; 300, \$1.47½ ½ c.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to April 23 '87.	July 1 '87 to April 21 '88.
Flour, qr. sks.....	3,739,114	3,098,477
Wheat, cts.....	11,412,541	7,704,779
Barley, cts.....	2,017,639	1,991,905
Oats, cts.....	118,600	146,891
Potatoes, sks.....	726,383	974,642
Corn, sks.....	84,259	201,333
Rye, sks.....	21,697	16,053

Bran, sks.....	27,918	53,763
Hops, bales.....	754	508
Hides, No.....	28,795	24,237
Rye, cts.....	5,154	5,154
Potatoes, sks.....	128,479	77,834

Cereals.

J. E. Beerbohm's London *Evening Corn Trade List*, of March 29th, in its weekly review says: Some fresh reports have this week been received concerning the Indian wheat crop in the Punjab and the Bombay Presidency, which are rather more favorable than those in December last, especially concerning the Punjab, where the acreage is now returned as 5,910,300 acres, against 5,588,500 acres according to the last report, and 5,943,400 acres last year. The prospect, moreover, is now considered very favorable, late rains having fallen. In the Bombay Presidency the area sown this year is said to be 2,950,000 acres, against 2,860,454 acres last year; the yield in the most important wheat-growing districts has, however, been greatly reduced by rust, so that in many places it only amounts to half or two-thirds of a crop. In the Berar district the acreage this year is 931,601 acres, against 933,938 acres last year; the outlook is considered to be quite above an average. In the Northwest Provinces and Oudh the outlook was favorable, according to latest advices, as well as in the Central Provinces.

The April report of the Department of Agriculture places the average condition of winter wheat at 82 for the entire country, as compared with 88 on April 1st last year: The following table compiled by the New York *Produce Exchange Reporter* from Department of Agriculture reports, shows the average condition by States for the years mentioned:

	Apr. 1, '83.	Apr. 1, '87.
New York.....	94	97
Pennsylvania.....	90	70
Ohio.....	68	79
Michigan.....	76	92
Indiana.....	75	90
Illinois.....	74	72
Missouri.....	82	95
Kansas.....	97	83
Texas.....	88	79
Kentucky.....	76	92
Tennessee.....	97	94
Maryland.....	92	82
Virginia.....	91	79
California.....	99	92
Oregon.....	78	98

The following compilation shows the general average condition of winter wheat on April 1st, for the years indicated:

	Condition.	Condition.
1888.....	82 to 88½	94 to 100
1887.....	88 to 188½	80 to 100
1886.....	92 to 188½	104 to 100
1885.....	76 to 188½	85 to 100

The New York *Produce Reporter* just to hand says: Our letters to-day from the West complain of the slow progress winter wheat is making, this due to a want of moisture and the low temperature. The frequent rains in February, March and the early part of April did not do much good, as the ground was frozen, hence to insure a fair crop even, we must have copious rains this and next month. Farmers in Indiana and Illinois have already plowed up many large fields and have put in oats in most instances. In Ohio, Indiana and Illinois the crop is very irregular, very patchy, and hence it will be difficult to estimate the yield properly, and this can only be done safely and correctly after thrashing is completed. The damage done to the crop is serious in Illinois and Indiana, and they carried over very little old wheat into the new year, so that the wheat situation with them is now of more than usual interest. We notice a continued good demand for wheat for Spain and we find the quantity taken for that country since the 1st of September is considerably in excess of our estimate in our annual statement.

The *Daily Market Record* of Minneapolis, Minn., says: Wheat is now coming out of Dakota elevators as rapidly as facilities for moving it are offered by the railroads. One reason of hastening it forward from Dakota, rather than Minnesota, is that the tax assessor of Dakota assesses all that is found in Dakota elevators May 1st. There would be nothing so bad in that as to lead to active exodus, were it not that past experience shows that the average Dakota assessor knows no scruple when it comes to gathering taxes from the elevator men.

Oregon advices report a general rainstorm in the Willamette valley, which, it is claimed, will do much good to the growing crops. But even this will not make the wheat crop in Western and Eastern Oregon, and in Eastern Washington, more than a fair average—last year was largely above an average. In this State there is a more general feeling that even good, soaking rains in this month will not make more than last year's outturn, while with only light showers it will be less. In many sections the plant is hopelessly killed by the dry weather. As yet, the condition of the plant is exaggerated, but still, without rains soon, the worst is apt to be realized. In the coast counties, cool, moist and foggy weather has done a great deal of good, and the outlook is of the best, but then the grain will be fog-colored. The above will cover the outlook for oats and barley as well as for wheat.

In the local market, the past week witnessed a strong market for wheat, with few sellers. The unpromising prospects for the crop on this coast is causing stronger holding, with the more desirable straight parcels withdrawn. This action is due to the impression that a higher range of values will obtain not only on this coast but also abroad. This belief is emphasized still more by the strength of the English market, which shows, in the face of heavy arrivals of wheat off coast, an increase on passage, and the Russian ports open with an unusual number of vessels awaiting cargoes. The bears in this city claim the supply available up to July 1 to be about 275,000 tons. The writer's advices from the various warehouses and farming centers do not warrant placing it at over 200,000 tons, which by July will be reduced to less than 100,000 tons for the entire State. Some sales of choice milling wheat have been made at full prices; it is now held higher, but millers at the advance are slow buyers. Oregon continues to send us liberal supplies of both wheat and flour. The latter is sold at cut rates, which works against California millers.

Barley has held strong throughout the week, under freer buying and a lessened selling pressure. Receipts have been larger, which operated to keep the market from showing a still higher range of values. Stocks in the State, under a large consumption, are being depleted quite rapidly, particularly for the better grades. Choice to extra choice brewing are wanted by brewers in this State, Nevada, Oregon and Washington. The stock carried by them is quite light considering the low prices.

Corn has been weak under free receipts. The buying interest held off for lower prices, and consequently only take to cover immediate wants.

Oats have held to steadier prices, owing to lessened receipts. The demand has been fair, particularly for good to choice grades.

Rye, under light stocks and light receipts, shows more strength at an advance.

Buckwheat is steady.

Feedstuff.

Bran, middlings and ground barley are strong and higher. The consumption is increasing quite steadily, owing to the dry weather.

Hay has commenced in some sections, but notwithstanding which the market holds strong, owing to poor feed and a growing demand for cured feed. The crop this year, it is claimed, will hardly equal that of 1887, while the carryover with the new season will be quite light.

Fruits.

Fine maturing weather has increased the receipts of strawberries, cherries and gooseberries. The freer receipts caused values to shade off, with some daily fluctuations in prices. From the North there has been a good demand for berries.

Oranges came in the past week quite freely, caus-

ing weak prices for poor to good, but choice held strong. The North continues to draw freely.

More contracts were made the past week for future delivery of apricots. The sales reported show a gradual advance; the last being 2½¢ for Vacaville grown. In the Santa Clara valley orchardists ask from 2½¢ to 3¢. A sale of 75 tons of peaches, plums and apricots was made at Vacaville to J. Lusk & Co., at 1½¢ all around. The bulk sold were plums.

In dried fruits, the market is slow, with some shading reported to close out consignments. Montana, Idaho and Nevada are steady buyers.

In raisins, there is nothing new to report. The stock here is very light, which causes holders to maintain strong prices.

Live-Stock.

Choice, well-conditioned bullocks are scarce and fetch more money, particularly the medium-sized that cut up without wastage. Mutton sheep are weak; many flocks will soon begin to move to the mountain valley ranges. Hogs are higher and strong at the advance. Block hogs are wanted, and for which as high as 6½¢ on foot was paid the past week, although that price cannot be quoted. In milch cows, there is nothing doing. The scarcity of feed is against them. Last week's report covers this week's advices about horses.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6½ to 6¾¢ per lb.; dressed 9½ to 10¢ per lb.; soft, 6 to 6½¢ per lb.; dressed, 8½ to 9½¢ per lb. Stock hogs, 3½ to 5¢ per lb.

BEF—Stall-fed, 8 to 8½¢ per lb.; grass-fed, extra, 7½ to 8¢ per lb.; first quality, 7 to 7½¢ per lb.; second quality, 6½ to 7¢ per lb.; third quality, 5 to 6¢ per lb.

VEAL—Choice, 9 to 11¢ per lb.; fair to good, 7 to 8¢ per lb.

MUTTON—Wethers, 6½ to 7¢ per lb.; ewes, 6 to 6½¢ per lb.; lamb-spring, 9 to 10¢ per lb.

Vegetables.

New potatoes of good size and fairly matured are wanted for shipping to the East, and also to fill more distant orders in this State. Choice find a ready sale, but small, unripe, are hard to sell, as are the carryovers. Old potatoes are slow, and sell in buyers' favor. This year's crop of potatoes will be quite large.

Onions hold strong, under light supplies and a good demand.

The supply of old cabbages is about exhausted, under the large shipping demand.

In garden truck, the market is liberally supplied with peas, rhubarb and asparagus. String beans are in better supply, as are cucumbers. Prices are setting.

Canners will commence packing peas the last of this week.

Miscellaneous.

Continued receipts of live fowls from the Missouri river keep this market easy. Choice, well-conditioned hens and roosters are wanted.

Beans are slow, owing to the supply here being generally poor.

Choice hops are wanted for both home and shipping.

In wools there is nothing new to report. Receipts show an increase, but buyers hesitate, owing to the unsatisfactory market at the East and also from the poor results of last year's business. The home woolen-mills are not disposed to bid up, unless for a choice, well-conditioned, desirable clip.

An evidence of the sluggishness of grain is the continued abundance of freight-room. Wheat would be taken as ballast if obtainable, while a number of vessels have turned their bows to the sugar districts for cargoes home. It is reported that 110 steamer loads of Russian wheat are ready, destined for England.

The interruption of the brewers' business, caused by the lockout, has noticeably cut off local attention to hops, and English advices do not encourage exporters. All high-class lots, however, are firm, and former rates are named generally. Little credit is given to the reports of a contemplated decrease of the cultivation in this State.

Hides continue without important business. For special wants, for selections of Rio Plata grades 16½ has been paid. Sellers do not revise the last list.

Raisins are firm, and are likely to go to a complete clear-out.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	400,238	224,792
In port, disengaged.....	64,894	122,835
In port, engaged.....	12,271	3,862

Totals..... 477,403 351,489

To obtain the carrying capacity, add 60 per cent to the tonnage.

Tonnage on the way to Oregon, 22,835; tonnage at Portland, Oregon, loading and to load, 19,572. Total tonnage, 42,407.

How It Strikes Some Readers.

"I have been a constant reader of your paper for over two years and have received much valuable information from it."—J. P. R., Gilroy.

"Your paper is a valuable one, and it affords me much pleasure."—J. D., Denver, Col.

The PACIFIC RURAL PRESS must change its contents, or we must remain a lifetime subscriber."—G. W. W., Downey.

POLLED ANGUS CATTLE.—Readers who may be interested in the growing popularity of the black hornless cattle will not overlook the announcement in this issue of a large band of Polled Angus bulls and heifers (thoroughbred and grades) which are offered in Sacramento by Dr. G. M. Dixon. The cattle are from his Loupvalle stock ranch, Nebraska. Some of the cattle will show the results of the Angus cross, which is an interesting point. An advertisement of the stock may be found on another page.

On the old Bliss place, just northwest of Marysville, is a black walnut tree that measures two feet two inches in diameter.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

EXPLANATION.—1. for clear; Cy, cloudy; Fr, fair; Fy, foggy; — indicates too small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

First-Class Mowing Machine for Sale.

A brand-new mower of well-known make can be obtained cheap for cash by addressing D. F., Box 2361, San Francisco, Cal.

3000 Engravings for Sale.

We have 3000 or more duplicate Engravings and Electrotypes (which have appeared in this and other papers, for sale at very low prices when taken in considerable numbers. Address, DEWEY ENGRAVING CO., at the office of this paper.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7 1/2 x 5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address. DEWEY & CO., 220 Market St., S. F.

Price.....\$350.

THE IMPROVED EAGLE.

Size of bale in press, 26x26x60 inches. Average
weight of bale, 235 pounds. Capacity, from 10 to 15
tons per day. Requires 4 men and 2 horses. Uses rope
or wire. Hay must be tramped in the press. Puts from
4 1/2 to 5 1/2 tons in a box car.

Price.....\$250.

The above is the finest line of Baling Presses in the
United States. They are nearly double the capacity of
those of other makers.
For large, illustrated Catalogue of the same, ad-
dress the

Sequoia Gigantea.

As the season for the annual outing approaches, thought naturally turns to the old and yet ever new features of scenery which

head of Deer creek on the south, a distance of about 200 miles. Rarely does one of these great cedars fall; they seem almost as imperishable as the granite on which they grow. "The great sequoian ditches, dug at a blow by their

redwoods, for gigantic size. A tree from 300 to 400 feet high and 30 feet thick in the trunk is a great curiosity, and yet we have a number of such curiosities.

In the Calaveras Big Tree Grove there are

press any one with a realizing sense of the vastness of the trees, without some realistic comparison. A daily stage-coach has been driven through one, 120 children and a piano crowded into another, theatrical and cotillion perform-

GRIZZLY GIANT, MARIPOSA BIG TREE GROVE.

give California a place of her own among the political divisions of the earth's surface. Though the air is full of notes of progress, though new lines of travel are making accessible many new and interesting regions, the grand objects of interest which have given us world-wide fame lose none of their charm.

The sequoias are prominent features in the scenery of California. They are the mammoths among trees, the Methuselahs of the forest. The sequoia timber-belt along the Sierras extends from Calaveras on the north to near the

fall, and the tree tumuli, always turned up beside the deep root-bowls, remain, but not a vestige of one outside the present forest has yet presented itself; hence the area has not been diminished during the last 8000 or 10,000 years, and probably not at all in post-glacial times." The common notion, therefore, that this species tends toward extinction more than others seems absurd, for so far as mundane appearances are concerned their vital vigor is assured for ages to come. No known trees of the world compare with them and their kin, the

150 trees more than 15 feet in diameter, and ten that are about 30 feet. One of these fallen monarchs must have been 450 feet high and 40 feet in diameter. The "horseback ride," as it is called, one of the wonders of the grove, is a hollow trunk through which a man can ride upright on horseback 75 feet, and theatrical performances have been given in it. The State grove, in Mariposa county, is 15 miles south of Yosemite, and has 427 trees, including 134 over 15 feet in diameter, 18 over 25 feet and three over 33 feet. Language is inadequate to im-

ances given on the smooth stump of another. A single tree would furnish two-rail fencing 20 to 30 miles. The cut on this page may give one some idea of one of these Mariposa giants.

It is a direct reproduction from a photograph by Taber, being a photograph made by the Dewey Engraving Co., thus accurately and expressly made for our columns. It brings out the immensity of the tree better than any other engraving we have seen. It portrays the vast bulk of the base from which one can better understand the natural elevation.

HORTICULTURE.

Propagation of Orange Trees.

[An essay read at the Santa Barbara Convention by M. BALPINE, of Covina, Los Angeles county.]

Some time ago your secretary informed me that I had been selected to prepare for this occasion an essay "How to Propagate Orange Trees," and in order to achieve brevity in doing so, I shall present such facts only as have come to my knowledge. Do not expect me to cover the ground as fully as might be desired. I have been in the business only five or six years, and have only learned just enough to enable me to realize how little I know about it. Besides, it could not be done in such a paper as could be read before this meeting. I shall not consume your time with theories or references to text-books or consular reports. You can get what there is in them at home and at your leisure. Neither shall I attempt a formula and insist that it apply to all places and conditions alike. I propose to treat the subject in a very plain, practical way, and if I repeat much of what I have said at various times before our County Society, it will be because my results have been so satisfactory that I would not change my methods.

The propagation of orange trees necessarily involves the conditions requisite to make a success. As this is the foundation upon which we propose to build, great care should be taken to make no mistake here. It takes too long to correct it. It is a well-known fact that certain vintages will give a flavor and bouquet much superior to other localities that money will hardly buy them. Certain localities only will give the most delicate aroma in tobacco, tea and coffee. Many of you are no doubt aware that the nurseries near Geneva in Central New York sell trees to all parts of the East. There is a reason for it. The conditions there furnish the material to make a better tree than those grown in most other localities.

Now, when you begin to make your program for propagating orange trees, the first thing to be considered is the selection of such a place for your seed-bed as will combine all the elements necessary to give a strong and healthy plant. Time and money would be well expended in visiting many places and noting where the best trees are grown and the conditions obtaining there. In this way you get a practical working test which is better than an analysis of soils. I would select a rich chocolate marl and fine sand, with just a little reddish clay in it; not so much that it would get stiff with irrigation. This will give you an abundance of fine, fibrous roots. If you plant in heavier land you will get a heavier tap-root, with so few fibers that the tree will suffer severely in transplanting. Plow deep and pulverize well. A light dressing of ashes well mixed will discourage the worms, which are sometimes troublesome. Lay off the grounds and make beds say 14x42, with narrow walks all around them. Use the spirit-level so that water will stand the same depth on every part. Put up earth from four to five inches high on the borders.

We are now ready for the seed. In man we recognize such a thing as inherent constitutional vitality, or "life principle." In animals we propagate with reference to it. The same thing obtains in the tree family. So far as my own experience and observation go, I am satisfied that stock grown from Tahiti seed will inherit this life principle in larger measure than that produced from any other source. A very large proportion of the trees in market are raised from "California windfalls," because they cost nothing. They are raised to sell, and only an expert can tell the difference. As to the "sour stock" which propagates itself in Florida and is being used here to some extent, some years will be required to determine definitely its value. All that has been planted in this locality has a rather pale, yellowish color which I do not like. I very much prefer the deep, dark green as indicative of a stronger life. All other "sour stock" has been fully tested and rejected. Lemon and lime promised well for a time, as the continual flow of sap would push a bud faster than the orange, but latterly the verdict against them has been unanimous. While I would not discourage experiment in any direction, I would rely upon stock grown from Tahiti seed until better results have been fully established for something else.

To Obtain the Seed.

Go to any importing fruit-house and ascertain when they will have a cargo of oranges from Tahiti. Many of them will be decayed. Have a man there to select the largest, pack them in barrels and ship them in pulp. When they come to hand, wash out and plant. Do not permit them to dry. Cover nicely, say $\frac{1}{2}$ to $\frac{3}{4}$ of an inch. Now cover the whole bed with clean sand one inch, as you cannot cultivate and must irrigate while in seed-bed. This will keep the weeds from starting and the ground from baking. A barrel should give 1500 to 2000 plants. Now put up posts and stretch bales to represent ridge-pole and plates. Cover with very thin cotton cloth. This will protect the young plants from the sun and permit free circulation of air underneath. Irrigate always before the plants begin to show that they need it.

The month of May is a good time to plant.

At about the same time next year transplant the nursery.

Have the ground thoroughly irrigated and well prepared. Plant far enough apart for convenience in cultivating, and a foot apart in the row. Bear in mind that you must have sand and marl with but little clay to furnish the mass of fibers you will need when transplanting to orchard. When growth conditions are well defined, put up a tent to protect fibers from sun and wind while handling. Make a box with one open side, face that side north, take up about a hundred and carry to the tent and assort into 1st, 2d and 3d, and grow and heel in until the planters come for them. Let them take in a similar box about the same number. Plant with dibble, taking care to close solid around plant at bottom. Handled in this way, all should live. They should not even lose their foliage, and the growth which has just started should come on pretty much the same as if they had remained in seed-bed. Now irrigate just enough to furnish requisite moisture, and cultivate so thoroughly that weeds will have no chance to start. Do no pruning except to keep the way open for horse and cultivator for 18 months.

Budding.

If trees have made a strong, thrifty growth, I would set buds in the fall. In my locality I can generally get buds and trees in condition in October. Buds should be cut from vigorous, healthy, bearing trees only. Sometimes several buds should be rejected from the heavy end of a stick, because imperfectly developed, and on tip end they will be too sharp and thin. I prefer to set buds in the fall, as they are then well developed and ready for the February growth.

The most important feature in the budding is the tying. I would just touch with wax after slipping in the bud, before putting on the string. Then be sure the top is well secured. I have often seen buds loose at the bottom, living, while all I ever saw loose at top were dead. I prefer to let the strings crease the bark pretty well before taking them off. As growth conditions come on I cut off the tree about four or five inches above the bud, and cover with wax to keep the wood alive until it is all healed in. When the bud is large enough to carry all the sap, select a period of non-growth and stamp off to a shoulder with the bud and again cover with wax. This cut I would make with a saw, and as nearly level as may be.

Ground should be kept loose in the tree-row, otherwise klinker or scoria will form on the bark and originate "gum disease." If this should occur you may save the tree by scraping thoroughly to sound wood.

The method here outlined has given me Washington Navel buds, ten feet high at one year, and with good body and well branched, with a tree taper like a carriage whip, carrying white wood, and rounding cane well to top. Such a bud, with very large leaves and dark-green, wax-like surface, furnishes the most conclusive evidence that conditions were good and methods correct.

I use no fertilizer in seed-bed or nursery. The nurseryman or orchardist can well afford some time and money in quest of such trees, or the locality which will in its normal condition produce them. The next business in order is

Transplanting to Orchard.

Here, again, conditions must govern. I prefer to do this at one year also because there is much less top to cut away than at two years old. The second year's growth on such a bottom is enormous, is inclined to mature wood and put on fruit, and has to be cut away if left in nursery, when, if removed to orchard, such growth as is wanted can be forming the permanent top, and the rest can be thumb-pruned away without shock or check to the plant. As trees are to be taken from nursery in spring, I strip the cane pretty close in early winter, then tip with wax every raw place. It is then healed over, the tree re-covered, and there is not much to do when planting-time comes, but to cut off so much of the top as would come above your six-foot stake. My trees carry this height nicely from nursery to orchard with stake for support. The first business the cane does will be to clothe itself from the bottom up, and you have a tree at once. I like this method for another reason. The first growth is strongly inclined to be lateral, with a downward tendency. If that is taken off the next growth will be nearly at an angle of 45 degrees, and the tree can be readily shaped to carry a heavy load of fruit. This method I consider a very important feature in the foundation of a tree, and never having seen it adopted or suggested in any of the books, I claim it as an original discovery and solicit investigation. Five thousand such trees planted in my own orchard two years ago will verify what I claim for it.

As to the proper time to transplant, again consult conditions and be governed by them. Seasons vary very much, and it is not safe to name the day, week or month. When the buds are swollen to bursting, and new growth just starting, that is the time to take the tree from nursery to orchard. If there would be danger of subsequent frost, wait until such conditions are again on, when this growth has hardened. In my locality I very much prefer planting in February. Trees are then well established before the hot weather comes on. I finished transplanting the 25th of February, and the young growth just starting came on about the same as if trees had remained in nursery. When you find the tree in proper condition, cut it

back and cut the tap-root to hold it there. See that ground is well prepared. Lay it off and secure your force. I would plant budded trees 24 feet apart each way; seedlings, 30. Have everything in readiness before you touch a tree. If a norther should come on just as you are ready, stop and wait until it is over. When weather is favorable, put some of your men to raising trees, some to digging holes and some to hauling. Cover with wet blankets as soon as out of the ground. If sun is shining hot, or you have far to haul them, I would grout them, but there is so much danger that the grout may be permitted to dry or harden on the fibrous roots, that I would almost be willing to say dispense with it entirely. I have never yet sacked a single tree, and latterly I have not grouted. I have made a success in packing to haul 40 miles without it. Sacking necessitates more root-pruning than I am willing to do. If land is deep marl and sand, as it should be, cut tap-roots 24 inches, dig holes 30 inches and set crown-roots six inches below dry earth. I insist upon more tamping than most men are willing to do, but my trees live and do well. I ride no hobbies. I will adopt another man's methods when I see that he gets better results than I do. If a little space is left open anywhere on the tap-root, or the ground is left so loose that the first irrigation will open one, the bark will rot there and all below it is lost. I have two tampers and one shoveler to each setting-board, and dirt is filled in no faster than it can be made solid. I never plant orange trees to get done, never leave a tree until the work is well done. One tamp stick should be quite small to work among the roots. Tamp the bottom solid up to the crown-roots, then cover them and let one man tamp with his feet. A tank-wagon should follow the setters and give each tree a bucket of water. As soon as the water has disappeared, cover up with loose earth. Now the tree has what is indispensable—something to preserve the old life until the new life begins. One bucket of water at this time is worth more than a flood a few days after. Your citrus tree cannot wait until you have finished the plot.

Now stake the tree and tie it, otherwise the wind will move it back and forth, packing the earth on either side, until a little space is opened around the cane where the air can penetrate to the crown-roots and evaporate the moisture. Put a little straw, half composted, on top before the hole has been quite filled; put a little earth on it to keep the wind from blowing it away. Now paper the trunk; it keeps the jack-rabbits from eating it, prevents young growth from starting where it is not wanted, and protects the bark from the reflection from the sand, otherwise the south side will be hide-bound. Try it with your knife; it will not slip, and you will find free circulation of sap on the north side only. You must protect the trunk from the ground up until the foliage will do it. Now the work is done. Ninety-five per cent of the trees will live and make a growth at first growth period after they are established in their new home. Handled in this way without sacks or grout, I planted two years ago about 6000 and did not lose a dozen trees. Now station a man there with a shotgun with instructions to use it for business on the first man who comes along with a load of white stakes marked "Lot 1 in Block A," and keep him there until your orchard comes to bearing, and it will then be difficult for him to persuade you that the stakes will yield a better crop than the trees.

Citrus trees should never be distributed ahead of the planters, or allowed to suffer a moment in any way at any stage of the business, or a check will result. If severe, a stunt will follow, from which it will be difficult to get a good recovery. There is but one course to pursue with a stunted tree—put up the best sucker coming from near the bottom and train that to a stake for the future tree. When it has made a strong growth, cut off the old stem to shoulder with it as with a bud in first instance.

Care of Orchard.

Irrigate just enough to furnish requisite moisture, and no more. Cultivate and mulch thoroughly after every irrigation. Nothing will kill the tree so surely, or more quickly, than to irrigate and let the ground bake around it. Never let a weed show itself in the orchard, and do not plant peas, pumpkins, potatoes or anything else there, as many do. Carefully watch the young growth, and thumb-prune away such as is not wanted, reserving that which goes up at a proper angle to support the heaviest weight.

I crown my trees low, and shape them like an egg, big end down. Many people keep the stem as smooth as a walking-stick up to a nice little tuft on top. I often wonder why. The Japanese pursue this course when they wish to permanently dwarf a tree. The more foliage you have the stronger will be the life and growth of your tree. Control the growth, but do not destroy it until you can spare it. This can be done by pinching the ends.

Watch closely for scale at all times, both in nursery and orchard. If you find any, go after them with starch, pure and simple, 30 or 35 pounds to 100 gallons water. Cook properly and spray, using pretty hot. It will not hurt the fruit or foliage and will kill every scale it reaches, and that is all that can be accomplished by a more expensive process.

Conditions of Success.

If a decided success is not achieved here, all the time and money spent in the propagation of orange trees is a dead loss. In order to achieve

the best results, certain conditions are requisite in the man who is engineering the plant. He must recognize the fact that certain inexorable laws have been ordained to govern. He must find them out and get into harmony with them. Spasmodic effort will not do. He must have painstaking and perseverance well developed. He must put on his "never-wear-out" overalls, go into the nursery, and stay there until there is nothing left of them but the buttons. He must know more this year than he did last all the time. He must be "clock-full" of trees, and love them so well that he will not leave them to engage in some other business, or depend entirely upon employees. He must secure the proper facilities for establishing perfect conditions, and see to it that they are always maintained from the seed to the fruiting.

There is, perhaps, no other fruit business so exacting in its requirements as orange culture. Be assured that nature will not depart from her established methods for our special accommodation. It is well to "watch and pray," but we must "fertilize, cultivate and spray" at the same time in order to get "fancy" results. In the golden days of Forty-nine and Fifty, some men came here with a coffee sack and a little scoop, expecting to fill it in a few days when they got to the "diggings." Later on I saw them with the empty sack waiting for the "old man" to send them money to get home with. Latterly some men have come here from the East expecting to see the "green-peas and strawberries" make their appearance on the sage-brush and tar-weed, because this is "Glorious Southern California." They have been disappointed and have written back some diabolical letters; while those who have fulfilled the "conditions precedent" by nature's requirement have prospered as no other people have done on the face of the earth since the white man found it, and we are yet in the incipency of development.

Now, in conclusion, let me say "Queen Pomona" permits no violation of law in her domain without exacting a penalty. She makes no mistake in the distribution of her favors, and only those who have deserved it may expect to secure her choicest treasure—the "Golden Apple of the Hesperides"—in full perfection, or hope to realize all the beauty there is in the bud and blossom, and the "golden fruit" which will command the "golden coin" on presentation.

Walnut Culture.

[An essay read at the Santa Barbara Convention by JOSEPH BENTON, Goleta, Santa Barbara county.]

The culture of the soft-shelled walnut as practiced by me is the same as for the common nut and all stone fruits. The seed should be planted in beds during the month of January, and covered about one inch deep, and kept moist, but not wet, until they germinate, which will be in about three or four weeks, according to the temperature at that time.

As soon as they crack and show the sprout, they should be transplanted to the nursery rows, $4\frac{1}{2}$ to 5 feet apart, and 6 inches apart in the row. They will grow the first year without irrigation 6 to 12 inches, and with irrigation 6 inches to four feet; the second year from 4 to 8 feet without irrigation, and about the same with it. I cultivate all without irrigation, and think they make a better tree to plant where irrigation is not to be practiced.

The best aged tree to plant is two years old; not that I think the age makes any difference, but the trees at that age are of a size that they can be seen, and no danger of getting damaged while cultivating. In careful hands I believe one-year-old trees as good or better; and perhaps it would be better still to plant the seed where you want the orchard tree to grow; but if planted in this way, great care must be taken for two years in cultivating, that they do not get trodden down and the tops broken off, which makes the orchard uneven and unsightly.

When planting two-year-old or large trees they should be selected, planting the largest trees first, and keep on doing so until the orchard is finished; by doing so you can get trees of equal size together.

Some say it will not do to plant the seed where you want the tree to grow, that it must be transplanted, and the tap-root cut to make it fruit. I have tested this claim and found it a fallacy, and find nuts planted alongside of one-year-old trees; all have proved prolific, and are larger trees than those one year older. If this theory was true, I think the gopher would attend to the root-pruning generally, and we should feel thankful that the gopher, or some other rodent, struck the tap-root of the first walnut trees.

The soft-shell walnut should be planted in orchard form, 40 by 40 feet. It is more upright in its growth than the common walnut, and will do as well 40 by 40 feet as the hard-shell will 50 by 50 feet.

Low-growing crops can be cultivated for several years in the walnut orchard, until they commence to fruit. Beans and squashes are preferable to potatoes or root crops, as those attract the gopher, who is very fond of the walnut roots.

The soft-shell walnut commences to fruit at six years old, from the seed, and some have been known to fruit as young as the fourth year. My trees have produced full crops each year for the past fourteen years. The hard-shell commences to fruit about the ninth year,

and bears full crops alternate years. The soft-shell is not as strong a grower as the other walnut, it being so prolific retards its growth, and at the same age—taking a number of years together—it will not produce as much fruit per tree as the hard-shell variety, and at the same price it would not be as valuable a tree to plant. But the trees can be planted closer together, and the price can be made so much more that it will be the most valuable tree to plant.

The price is greater at this time, and when there are enough produced to compete in the market, there will be as much difference in price as there is in the hard and soft shell almond to-day. I have sold the most of my soft-shell walnuts each year for seed, and have offered but few in the market, and where I have, the price has been 13 cents. The hard-shell has ranged during the last ten years from seven to ten cents. If we had as many Santa Barbara soft-shell walnuts to put on the market as we have of the other varieties, I think the price would be nearly double, and quicker sale. It is a superior nut, and when better known will be pronounced so by all. The kernel is white, and better for confection and for all other purposes. The shell is thin, rendering them easily broken by the hand, at the same time strong enough to bear transportation to any part of the United States.

The origin of this nut may be of interest to this society, and is as follows: The winter of 1867, I bought in San Francisco a large sack of what they called English walnuts. I cannot say whether they were mixed or not. I had but little experience with the walnut previous to this. I raised about 1000 trees that season, and planted 200 of them the following spring, in orchard form, at Goleta; 60 of them proved to be the soft-shell variety. The balance I sold at one, two, and three years of age; part of those proved also soft-shell. This walnut, like all others, should be planted in deep, rich, sandy soil to insure the best results. The soft-shell is a little later starting in the spring than the common nut, and blooms about ten days later; and I have expected it would come true from seed, but I find they sport some; yet, at the same time, I have found none that deteriorate, and all that have come different I believe to be an improvement. I exhibit some of both varieties for the inspection of this society.

I planted 24 trees raised from soft-shell nuts; 21 came true to parent tree and three made a much stronger growth, and commenced fruiting at the age of six years, same as soft-shell, and produced the improved nuts. I have not had time yet to test their bearing qualities, they having fruited but two years. If they should bear full crops each year, as the soft-shell does, and the tree a more rapid grower, even if the fruit does not prove superior, they will be considered an improvement.

The walnut wants but little pruning, and I cut none but those limbs that run down and are in the way of teams while cultivating. I prop thoroughly while the trees are heavily laden with fruit and foliage, and they should be kept up to avoid cutting. If limbs have to be cut off on the upper side where water is liable to collect, they should be waxed, as the walnut limb is generally hollow, and water enough may collect to rot the limb.

The soft-shell ripens a little earlier than the common nut, and they both vary somewhat according to the season. We generally commence to pick on the 10th to 15th of September, and gathering lasts a month to six weeks. There are different modes of gathering; some clean the trees at once, and others go over them several times. I pick what has fallen without knocking. I then tap those limbs lightly on which the nuts are ripest, and the third time over I aim to clean the trees. The walnuts are picked up and put in sacks and barrels, so as to be easily handled and hauled to a sunny place to dry, and should be placed on elevated platforms made of narrow boards, with spaces one-fourth of an inch between each board. The platform should be about 8 feet wide and 40 feet long, or as long as two men can handle a canvas to cover the beds, which should be done every night the dew falls.

The nuts should be stirred in these beds once or twice each day, and with favorable weather they will dry sufficiently in three days, and are ready for market. I have always dried my walnuts by the sun, and they have given good satisfaction, and for small orchards, I think it the cheapest and best way. Some dry by evaporation, and claim it is preferable to the sun; that it sets the oil quick and prevents the nut from becoming rancid. Others claim that it makes them so; but be this as it may, those having large orchards cannot depend on drying all by natural heat, and the drier will have to be used, even if it is not so good for the fruit.

The walnut is marketed in sacks, the greater portion in what is called walnut sacks, and holds about 120 pounds; others use the common barley sack, holding 65 pounds.

WANTON DESTRUCTION OF TIMBER.—Special Timber Agent Bernhart of Oregon says that while inspecting timber-lands in that State he saw many acres of blackened stumps. He was told by an old settler that on account of a quarrel between two men, 25 years ago, about some rails which one had cut and the other claimed were split too small, the rails were set on fire and they set the forest on fire, and the outcome was that 144 square miles, or four townships of timber, were destroyed.

THE STABLE.

The California Mustang.

A writer for the New York *Spirit of the Times* has been looking up the character and deeds of what he calls the "native horse of California." Although the term might not pass muster from a scientific point of view, it is sufficiently intelligible:

An erroneous impression prevails on your side of the continent regarding the native horses of California. Many associate them with the mustangs of Texas, or the bronchos of the Northwest. There is only a slight resemblance to the Mexican, none at all to the broncho or cayuse. Nearer like the thoroughbred in appearance, especially the type of blood horse which prevailed fifty years ago; many of them of high form, not a few nearly models of beauty, and quite a number which could make a fair showing on the race-course. Old residents of the Southern country inform me it was not unusual for them to run a mile in 1:50, carrying an ordinary-sized man with such a preparation as would be thought by modern trainers an effectual drawback to speed. Whatever their capacities to run short distances, there is not the least doubt that for long journeys or even for hours between "sun and sun" in midsummer, there never was a breed that could cope with them under the same circumstances. There are well-authenticated accounts of distances accomplished in time that to say the least is nearly marvelous, and this is done over hills and dales with only a trail to gallop upon, and for provender the grass that could be cropped within the circuit of a lariat. Great horses, these first settlers of California. From a royal stock, as their progenitors were of the best blood in Spain, and the foremost horseman of his day, William Cavendish, Duke of Newcastle, extols them above all others and gives substantial reasons for his preference. His English work was published in 1667, rather more than a hundred years prior to the time when the Fathers and their military escort brought the starters to this shore, and as they were sound business men in all of their enterprises, there is little hazard in claiming that at least the sires were well chosen. When the records show that the Mission of San Francisco had 84 stallions of good breeding to 2000 breeding mares, it is altogether likely that the other missions were equally as well provided for in that line.

The native horses were bred especially for the saddle. There was no use for harness horses. In 1820, there was not a single vehicle from San Francisco to San Diego that had wheels made with spokes. The missions were so far apart that horses capable of going long distances, while there was daylight, were the kind that were needed, and this necessity be-sought a return. The survival of the fittest! But with the downfall of the missions there came another era which had also an influence in shaping equine form to a higher model. The officers under the Mexican Government were men of rank, and most of them had a fondness for fine horses. They were also partial to the "royal sport," and though the modern accessories of the turf were lacking, this did not debar them from gratifying the passion. Many, in fact most, of the early settlers, those who came from 1820 to 1845, married into native families, adopting their language and many of their customs. These were halcyon days, and, according to all accounts, a happier people could not be found. Hospitality was unbounded. A traveler could go from one inhabited point of the country to another without an outlay of a dollar. If his horse became lame, his entertainer would furnish him with another, and if his journey required dispatch, relays were offered on every ranch. But the purpose is to pursue the horse history of California, and though there is a strong temptation to deviate from a direct course, the main object will be kept in view. It may appear that there is little connection between the horses of early days and those which are now raised on Palo Alto, Rancho del Paso, Santa Anita, Sunny Slope, Rancho del Rio, and others of the great breeding farms of the coast, and yet it will be an argument in favor of the superior advantages, in climatic influences, California possesses. The native horses owe their origin to the same parent stock from which sprung the Mexican mustang. There are a few points of resemblance. The head, legs, and feet are something of the same stamp, and there the likeness ends. The Mexican, small, flat-sided, with so little muscle that it was wonderful that they were capable of carrying the weight of a man of average size. In 1875, I visited Los Angeles, and though it was acknowledged that since the American occupation of the country the native horses had deteriorated, there were several fine looking animals to be seen. Muscular and of fair size, carrying a heavy man with a saddle, which would weigh as much as those of English pattern, as jauntily as though racing weights were on their backs. More care had been taken in keeping up the breed in the section now called Southern California than north of San Francisco. San Diego, Los Angeles, Santa Barbara, Monterey, and up as far as San Jose the best were found, and there are well-authenticated accounts of remarkable performances. Walter Colton, who was chaplain on the Congress, was appointed by Commodore Stockton,

Alcalde of Monterey, then the capital of California, and entered upon the duties of his office, July 30, 1846. In 1850, he published his work, "Three Years in California," very entertaining, the greater portion being copied from his daily journal. There is one part which has so strong a bearing on the capabilities of the native horses that I copy it, as it is not likely that many of the *Spirit* readers have seen it, and not many of those have a proper appreciation of the quality of those wiry steeds. He writes:

"The ride of Col. Fremont from the Ciudad de Los Angeles to Monterey, in Alta California—a distance of 420 miles—and back, exhibits in a strong light the iron nerve of the rider and the capacities of the California horse. The party on this occasion consisted of the colonel, his friend, Don Jesus Pico, and his servant, Jacob Dodson. Each had three horses, nine in all, to take their turns under the saddle and relieve each other every 20 miles, while the six loose horses galloped ahead, requiring constant vigilance and action to keep them in the path. The relays were brought under the saddle by the lasso thrown by Don Jesus or Jacob, who, though born and raised in Washington, in his long expeditions with Fremont had become expert as a Mexican with the lasso, sure as a mountaineer with a rifle, equal to either on horse or foot, and always a lad of courage and fidelity. The party left Los Angeles on the morning of the 22d at daybreak, though the call which took the colonel to Monterey had reached him only the evening before. Their path lay through the wild mountains of San Fernando, where the steep ridge and precipitous glen follow each other like the deep hollows and crested waves of ocean under the driving force of the storm. It was a relief when a rough ravine opened its winding on the line of their path. They reached at length the maritime defile of El Rincon, or Panto Gordo, where a mountain bluff shoulders its way boldly to the sea, leaving for 15 miles only a narrow line of broken coast, lashed at high tide and in the gale by the foaming surf. The sun was on the waves of the Pacific when they issued from the Rincon, and twilight still lingered when they reached the hospitable rancho of Don Thomas Robbins, 125 miles from Los Angeles. The only limb of the company which seemed to complain of fatigue was the right arm of Jacob, incessantly exercised in lashing the loose horses to the track and lassoing the relays. None of the horses were shod—an iron contrivance unknown here except among a few Americans. The gait through the day had been a hard gallop, relieved at short intervals by a light trot. Here the party rested for the night, while the horses gathered their food from the young grass which spread its verdure on the field. Another morning had thrown its splendors on the forest when the party waved their adieu to their hospitable host and were under way. Their path lay over the spurs of the Santa Barbara mountains, and close to that steep ridge where the California battalion under Fremont encountered, December 25, 1846, a blinding storm, which still throws its sleet and hail through the dreams of those hardy men. This path continued over the flukes and around the bluffs of this coast mountain, relieved at intervals by the less rugged slopes and more level lines of the Cascades. The hand-gallop and light trot of their spirited animals brought them at set of sun to the ranch of their friend, Captain Dana, where they supped, and then proceeding on to San Luis Obispo, reached the house of Don Jesus, the colonel's companion, at 9 o'clock in the evening, 135 miles from the place where they broke camp in the morning." The party was detained at San Luis Obispo until 11 A. M., and by 8 P. M. 70 miles were accomplished. That night the horses were stampeded by bears. Fresh horses had been obtained at San Luis. Mr. Colton's words will again be copied: "The horses, by good fortune, were recovered, a fire kindled, and by break of day the party had finished their breakfast and were again in the saddle. Their party, issuing from the gloomy forests of the Soledad, skirted the Coast Range, and crossed the plain of the Salinas to Monterey, where they arrived three hours to set of sun, and 90 miles from their last camping tree. The principal citizens of Monterey, as soon as the arrival of Col. Fremont was announced, assembled at the office of the Alcalde and passed resolutions inviting him to a public dinner; but the urgency of his immediate return obliged him to forego the proffered honor. At 4 o'clock in the afternoon of the day succeeding that of their arrival the party were ready to start on their return. The two horses rode by the colonel from San Luis Obispo were a present to him from Don Jesus, who now desired him to make an experiment with the abilities of one of them. They were brothers, one a year younger than the other, both the same color—cinnamon—and hence called *el canelo* or *los canelos*. The elder was taken for the trial and led off gallantly as the party struck the plain which stretches toward the Salinas. A more graceful horse and one more deftly mounted I have never seen. The eyes of the gathered crowd followed them till they disappeared in the shadows of the distant hills. Forty miles on the hand-gallop and then camped for the night. Another day dawned, and the elder canelo was again under the saddle of Col. Fremont, and for 90 miles carried him without change and without apparent fatigue. It was still 30 miles to San Luis, where they were to pass the night, and Don Jesus insisted that canelo could easily perform it, and so said the horse in his spirited look and action. But the colonel would not put him to

the trial, and, shifting the saddle to the younger brother, the elder was turned loose to the remaining 30 miles without a rider. He immediately took the lead and kept it the whole distance, entering San Luis on a sweeping gallop, and neighing with exultation on his return to his native pastures. His younger brother, with equal spirit, kept the lead of the horses under the saddle, bearing on his bit and requiring the constant check of his rider. The whole eight horses made their 120 miles each in this day's ride, after having performed 40 the evening before.

"After a detention of half a day at San Luis Obispo by a rainstorm, the party resumed the horses they had left there, and which took them back to Los Angeles in the same time they had brought them up, thus making their 500 miles each in four days, with the interval of repose occupied in the ride from San Luis to Monterey and back. In this whole journey from Los Angeles to Monterey and back—making 840 miles—the party had actually but one relay of fresh horses; the time on the road was about 76 hours. The path through the entire route lies through a wild and broken country, over ridges, down gorges, around bluffs, and through gloomy defiles, where a traveler, unused to these mountains, would often deem the slow trot impracticable. The only food which the horses had, except a few quarts of barley at Monterey, was the grass on the road; though the trained and domesticated horses, like the canelos, will eat or drink almost everything their master uses. They will take from his caressing hand bread, fruit, sugar, coffee, and, like the Persian horse, will not refuse a bumper of wine. They obey with the gentlest docility his slightest intimation; a swing of his hand or a tap of his whip on the saddle will spring them into instant action, while the check of a thread rein on the Spanish bit will bring them to a dead stand; and yet in these sudden stops, when rushing at the top of their speed, they manage not to jostle their rider or throw him forward. They go where their master directs, whether it be a leap on the foe, up a flight of stairs, or over a chasm. But this is as true only of the conduct and behavior of those horses trained like the canelos, who vindicate in the mountain glens of California their Arab origin. They are all grace, fleetness, muscle and fire; gentle as the lamb, lively as the antelope, and fearless as the lion."

Enthusiastic as the Duke of Newcastle was in his praise of the Spanish horse, the reverend Alcalde is not far behind in his panegyrics. I have heard many of the first American settlers of this country relate feats which will compare with those quoted, and there is not the least doubt of their great capacity for long journeys, and in time which no other breed could equal on the same fare. Quite a number of the best trotters in California can only be traced for two generations, and the "unknown" must either be native or emigrant. That the native is no bad element must be conceded.

A REMNANT OF THE BUFFALOES.—William Corbin of Weatherford, Texas, recently furnished the following information to a newspaper reporter: "A sale recently took place on the border-line between Texas and New Mexico, which was remarkable for the fact that it carried with it the last remnant of the great southern buffalo herd. A ranchman, whose name I cannot recall, has on his range 200 head, which he has carefully preserved and guarded in every way. They had increased in numbers, and there are probably 300 now. He recently sold out and they have passed into other hands. It is hoped that the present owner will pursue the same course as the former, as, with the exception of a small herd in the far north, the buffaloes on this range are the only ones outside of the zoological gardens. It would be more profitable than raising cattle, and for this reason I believe this remnant will be shielded from destruction."

ARIZONA STOCK INTEREST.—Hon. Patrick Hamilton of Arizona, who has been in San Diego for the past five months, on account of ill health, tells the *San Diego Union* that the "boom" in Southern California has opened markets for all the beef which Arizona has to sell. Instead of shipping to Kansas City or Chicago, there is now a nearer and more lucrative market either in San Diego or Los Angeles.

HOME AND FOREIGN CONSUMPTION OF WHEAT. The total wheat crop of the world is about 2,000,000,000 bushels, and at least 1,500,000,000 bushels are consumed in the countries in which it is grown, leaving a balance of 500,000,000 to supply countries growing no wheat or growing less than they consume. Speculation deals only with this balance that goes into general trade, and the speculators of the world in a single year will sell or transfer in their peculiar way 40 or 50 times 500,000,000 bushels of wheat.—*Glasgow Herald*.

It is proposed now to carry into effect the proposition of bringing water from the American river to the town of Folsom by a canal six feet deep, 32 feet wide and with a fall of nearly 100 feet. This will give employment to the State prisoners, give power for manufacturing purposes, and make Folsom a manufacturing town. The canal can be used for irrigation purposes.

LUMBER IN PLACER COUNTY.—It is estimated that Placer county has 450,000,000 feet of lumber fit for manufacturing purposes in her forests.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

San Jose Grange—Co-operation, Etc.

We enjoyed a very pleasant visit with the Grange of the Garden City last Saturday. We entered just as Bro. D. C. Feely was speaking of the duties of County Assessors and the unequal taxes which have to be borne by farmers, and thought that some remedies might be found. He could see no reason why an itemized list of the personal property of the tillers of the soil should be required while the merchant and manufacturer and others are allowed to estimate their personal property in bulk. It certainly stands farmers in hand to look into this matter, and stop any and all such unjust discrimination.

Bro. S. P. Sanders suggested that as the Secretary of the State Grange was present he might give some of the needed information, and upon being invited, we gave them as complete information as we could of the plan adopted most extensively and successfully in Pennsylvania.

We also spoke of the Rochdale co-operative plan that has been so successful in England, and mentioned the fact that in 1874 or 1875 the National Grange had sent Bro. Past Master Wright to England to gather statistics and information in regard to the co-operative associations there. He filed a full and interesting report. A number of prominent Patrons from different parts of the Union devised and reported to the National Grange a plan of organizing a Mississippi Valley International Co-operative Association, and the same was favored by the National Grange, if our memory serves us right, in place of the Rochdale system in all its simplicity.

The scheme was a large undertaking, and for lack of subscriptions or some other cause, failed to come into operation. We always thought it unfortunate that the Rochdale system was not recommended instead, believing that its four principal features are the best adapted for the government of co-operative associations, and are indispensable for perfect and lasting success, and for securing the greatest amount of benefit to its Patrons.

These points are: First, to buy for cash, and cash only. Second, to sell for cash, and cash only. Third, to divide the profits of the business equally (half and half) between shareholders and the purchasers of goods. And fourth, and perhaps the best of all, that no stockholder, no matter how many shares he may own, shall cast but one vote in the election of officers or any other transactions at the stockholders' meetings.

Where these provisions are engrafted in a co-operative association, there seems to be no chance of failure, whereby any individual can lose any considerable amount of money. This plan has never been tried in California so far as we know. We believe that it is surely worth a fair trial, and we hope that some Grange will organize a co-operative association on this plan, no matter how small its beginning must necessarily be.

We promised San Jose Grange to give Patrons in our columns as much more information on this important subject as practicable.

Bro. Wingate thought it well to appoint a committee to consult with merchants and see if they would co-operate with the Grange in some system of dealing with Patrons on the card system, and allow a discount on purchases made for cash.

Bro. Keesling considered that the merchants could afford to favor farmers, as a general thing, in cash sales, for the reason that living at a distance, they formed the habit of making their purchases in larger quantities than city people and townspeople who live near the store and can visit it more frequently.

Bro. Coates thought it might be injurious to the local growth and welfare of towns if purchases were made abroad from larger places and commercial centers.

It was remarked that it was difficult for most farmers to pay cash as they go. Bro. Sanders considered it the part of wisdom to borrow money and pay interest on the same in order to pay cash down for goods.

Bro. Webb mentioned that the sisters were equally interested in this question and often had the buying to do, and he would like to hear from them.

Bros. Feely and Sanders had often found by experience that in patronizing credit-giving stores they were obliged to pay sufficient profit on their purchases to make up the losses of other creditors who never paid their bills.

Capt. Hamilton (who until recently had been in the habit of purchasing supplies for voyages from San Francisco, and was thereby conversant with the comparatively low prices obtainable at wholesale houses) had been accustomed lately to visit the metropolis, and purchasing supplies in quantities, he could save his transportation fare and a goodly sum besides.

On motion of Bro. Feely, a committee was appointed to consider the advantages and practicability of adopting the Rochdale system and other means of co-operation for buying and selling to advantage.

The Worthy Lecturer of Temescal Grange, Sister Dewey, being called upon, made some very acceptable remarks, and extended a hearty

invitation to the brothers and sisters to visit Oakland and attend Temescal Grange.

The subject of Mildew on Roses was mentioned. Bro. Wingate stated that he has one of the finest Marechal Niel roses. He treated his bush to soapuds frequently, it being conveniently located for that purpose. He had been told by Mrs. Newhall, who has been a successful propagator of roses, that they succeeded best when so placed as to be shaded one-half the day.

Sister N. A. Sanders spoke of the fact that her roses this year were in far superior condition to that at any former period. She attributed it to the fact that last season she had frequently deposited tea and coffee grounds at their roots. It seems that the benefit of such care was to be derived the following season, rather than at the time of applying the grounds.

Sister Dewey had noticed that roses in Oakland seemed, as a general rule, to thrive better this year than formerly. She had concluded that it was owing to the fact that last winter was the most severe one experienced for 35 years, and that the cold was unusually long continued, so that the shrubs had had a far longer rest than usual and were much improved thereby.

Bro. Webb remarked that in our experiments in farming and horticulture, we should be more careful to cultivate plants side by side in the old as well as in the new way, so that we could determine more positively the effects of the varied cultivation.

Worthy Secretary Alley called the attention of the Grange to a lot of circulars and printed information in relation to the Patrons' Mutual Fire Insurance Company of Massachusetts, which documents were referred to the Committee on Co-operation. During the meeting the question of fire insurance was spoken of, and the fact mentioned that farmers as well as other property-holders of our State were probably more excessively taxed in this direction than those of any other part of the Union, prices having advanced from one-half to double the rates prevailing some few years ago. It is well known they were high enough then.

The meeting was a small one for San Jose Grange, although more than 20 persons were present, the brothers noticeably outnumbering the sisters. It being the opening day of the Floral Fair in San Jose, no doubt accounted for the absence of many good members.

We were very much pleased with the good spirit and determination of the brothers and sisters of San Jose Grange to persevere and advance the work of the Order.

Temescal Grange.

Temescal Grange held an interesting meeting Saturday, April 21st. The degree work being postponed, the question laid over for discussion was taken up, and Bro. Renwick gave his common-sense views on "Practical Education" without finding any one to quarrel with his ideas. According to his observation, a large portion of our highly educated boys were rendered worthless for work and practical business vocations.

Sister Blackwood being called upon to express the views of a teacher on the subject, said that most scholars passing the grammar grade of the public schools received all the education necessary or advisable for most children.

Worthy Master Goodenough agreed with Bro. Renwick, that more instruction in mechanical and industrial knowledge should be taught.

Brother Dewey suggested that it would be better if our children were required to occupy a longer term in obtaining their education. Let them occupy only one-half of the day in study, and the other half in industrial pursuits and recreation.

Other brothers and sisters made interesting remarks which were well received.

YUBA CITY GRANGE.—A meeting of Yuba City Grange was held April 21st, at which seven were initiated, says the *Sutter Farmer*. The usual harvest feast followed, and in the afternoon the members were favored with some excellent musical and literary exercises. The Grange is steadily gaining in standing and membership, and its meetings are spirited and interesting. The Picnic Committee is hard at work preparing a program and making arrangements for the annual gathering at Hock Farm, to take place May 15th. They expect to hold the best picnic that has ever been held on those grounds. Everybody will go that can.

SACRAMENTO GRANGE PICNIC.—We have no doubt the Sacramento County Grange picnic was largely attended on the 3d inst. We went to press too early in the week to receive any information in regard to it, but we know that the Patrons of that county have exerted every effort to make this the grandest affair of the season. The picnic had been well advertised in the local papers and every respectable person was invited.

BENNETT VALLEY GRANGE will hold its picnic on Saturday, May 26th.

Sentinels, not Spies.

That staunch champion of agricultural rights, the *Sutter Farmer*, referring to the flings of the slickens organs about "anti-mining spies," observes: "We want to call attention to the fact that we send no spies to the mountains. The term spy has attached to it a disgraceful significance, because spies go under cover of a disguise into the camp of the enemy, and, while pretending to be friends, are seeking information that will overthrow those among whom they are. There is an appearance of being a traitor when a man becomes a spy."

"Owing to the fact that some of the people of the mountain counties are not law-abiding citizens, and that, through their education, they think it right to disobey the courts and defy their decrees, we of the valley are compelled, in self-defense, to send watchmen among them. Our men go openly; they wear no disguise; they attempt no subterfuge, and they only ask to be allowed to go about their business. If they find no wrong-doers, they will trouble no one. If no law-breakers are to be seen, no arrests will be made. This system of watching is a hardship imposed upon us. The mighty Government of the United States has made the laws; the courts have decided upon them; but the citizens of Sutter and Yuba counties have to enforce them. We propose to do so, for we have justice upon our side, and justice is mighty and will prevail. If a man steals a horse in Sutter county and escapes to another county, every one is willing to help our sheriff catch him. The hydraulic miners would steal our homes. They would not only take away from us, but from our children and their children. When we attempt, through due process of law, to catch them, their press, their officers who are sworn to execute the laws, their judges who have taken a solemn oath to decide upon the law, all stand ready to protect the law-breaker, even if he be a Chinaman. When we object, they call us hard names. It is a matter of small importance, however. We have won the battle, and shall soon enjoy the fruits of the victory."

The Mineral Land Dodge.

The *Ventura Democrat* reports that a big land steal is being perpetrated in the eastern part of Ventura county. The promoters of the steal pretend that the land is mineral land, and have already succeeded in having it so designated by the General Land Office. Their purpose is to secure the tract, much of which is valuable for agricultural and horticultural purposes, and none of which is mineral land within the meaning of the law, for grazing purposes. There is much valuable land for homesteads in this district, and in quantity sufficient to settle 50 or 60 families in comfortable homes. This land is being denuded of timber by the same parties, who claim it, and over 130 cords of wood are said to have been traced. It is time such depredations on Uncle Sam's domain were stopped, and we are glad to be able to report in this connection that Mr. Brooks has the matter in hand, and is gathering facts to be submitted in evidence to defeat this piece of rascality. The public land belongs to all of the people until disposed of by the proper authorities; and for one man to strip it of timber or possess himself of a title to any portion of it by other than lawful means is a crime against the rights of all the rest which should not be quietly submitted to.

The Late Chief Justice Waite.

[By Mortimer Whitehead, Lecturer National Grange.]

The death of Chief Justice Waite, of the U. S. Supreme Court, has taken from active life one who will long be remembered as a benefactor to his country. Of the many new forces that this century has developed, none have grown faster, sooner attained the size and strength of a giant, or in a more threatening manner attempted to use its power for evil, than have corporations. Brought into existence by the people, all their rights and privileges granted them through the people's representatives in Legislature, they were not content to use, but abused the trusts with which they had been favored. Little by little, as they grew in size and strength, did they encroach upon the rights of the people, and when appeal or even the force of law was used to stay their pressure, they fell back upon "vested rights," "chartered rights," etc. The farmers of the country were the first, in a resolute and determined way, to call halt. In the strength of their young and almost untried organization, the Grange, in several of the Western States, secured the passage of laws that for the first time said to corporations, "so far shalt thou go and no farther" in your oppression

of the people by reason of your charter as corporations. It was a new idea, this young David meeting this Goliath, with a new weapon. Test cases upon the constitutionality of such laws, that could even go behind and above "chartered rights," were carried to the Supreme Court of the United States for final action. And in the now celebrated "Granger cases," as they were first called in derision, Chief Justice Waite made his remarkable decision that will ever be his noblest monument. He said: "It is a principle too long forgotten, and ought never again to be lost sight of, that the creature is subject to the Creator." That settled it; the power that grants a charter (the people) can also control that charter, "even to its absolute destruction," said the same righteous judge in a later decision. From these decisions have come our Interstate Commerce law, and others equally important are sure to follow.

Purchasing Bags From the State Prison.

Worthy Master Overhiser has received the following letter from John McComb, Warden of the State Prison:

DEAR SIR:—I am in receipt of your favor of the 12th inst., and am glad to hear that the plan adopted of selling grain bags to farmers direct has met the approbation of the different Grange organizations of this State, and also appreciate the way in which members of your Order show their approval, by sending in their orders, which we receive now about as fast as the bags can be manufactured. In selling these bags, our aim is to make no distinction between buyers of large or small quantities, and our price is the same to all, whether they order 500 or 50,000 bags. The price has been fixed at eight cents by the State Board of Prison Directors, and will not be changed at present, unless the market should fall below this fixed quotation, when, of course, we should have to lower the price. This exigency is not expected to arise during this season by anybody, whether consumer or seller, but, on the contrary, everybody expects to see higher prices yet. Our quotation (eight cents), in case the market should get higher, will not be raised, unless by order of the Board of Directors.

I herewith inclose you several of our circulars, giving terms on which bags will be sold by us, which may help you to post farmers with whom you will come in contact while visiting different parts of the State. Wishing you and your honored Order all success, I am Yours truly and respectfully, JOHN MCCOMB, Warden.

Tulare Grange Picnic.

We stop the press to comply with a request just received from Bro. J. W. Mackie of Tulare that we give notice of their Grange picnic, to come off next Wednesday, 9th instant. He says: "We expect Lucerne and Buena Vista Granges to assist us. We are going to have a brass band and colors flying, driving from Goldman's hall to the picnic grounds in a fine grove of oaks at 10 A. M. We are going to have a good time of fun, wit and wisdom. * * * I hope all the readers of the *RURAL PRESS* and the *Patron* within convenient distance will be there. They will have a warm welcome. If brother and sister Grangers will be pleased to wear the badge of the Order they will be certain to find a pilot to guide them to the pleasure grounds."

A SHOT AT THE TRUSTS.—Representative Rayner made an argument before the House Committee on Manufactures a short time since in support of his bill to prevent the creation of trusts. He said that the bill declared it unlawful for individuals, companies or corporations doing business in any State or Territory to make contracts, agreements or arrangements with individuals doing business in another State or Territory by which the price of an article dealt in shall be fixed at any standard or figure by which its price to the public shall be fixed or established. Under that provision of the Constitution, he said, which gives Congress the power to regulate commerce between the States, Congress had authority to enact such laws as would prevent the formation of these trusts and combinations doing interstate business. If it was conceded that this constitutional authority could be so exercised, it followed that Congress could prohibit the trust from making agreements to fix the prices of the articles they produce to preclude free competition. He contended that Congress had authority to prohibit the formation of these pools and to declare it unlawful for them to make contracts or agreements not to compete with or undersell each other and to regulate prices to the detriment of the public welfare.

San Jose Grange.

There was a large attendance of members at the session of the San Jose Grange, April 21st, says the *Mercury*, W. M. Hiram Pomeroy and Secretary O. F. Alley being on hand.

Captain Frank Dunn offered the following resolutions, which were unanimously passed:

WHEREAS, At the last meeting of the Willows Horticultural Society and the Santa Clara Viticultural Society, a committee was appointed to request the Hon. C. N. Felton, now in California, to appoint a day when the above societies could meet him at San Jose and exchange views on the subject of the proposed revision of the tariff; and

Whereas, The promptness with which Mr. Felton responded to the request deprived many of the more distant fruit-growers of the county from attending, we here assure Mr. Felton that the views of the Santa Clara County Fruit League are those of the whole fruit-growing community of the county; therefore, be it

Resolved, That the thanks of the fruit-growers of Santa Clara county in general, and this Grange in particular, are due and are hereby tendered to Mr. Felton for the prompt attention paid to our request,

Resolved, That we regret sincerely not having more time to collect the more distant fruit-growers to emphasize the sentiments expressed.

Resolved, That a copy of these resolutions be sent to the Hon. C. N. Felton, and that the San Jose *Mercury* publish the same.

It was stated that the Board of Supervisors were seriously considering the proposition of abolishing the position of fruit inspector in this county, and on motion Messrs. Wingate, Cyrus Jones and Capt. Dunn were appointed a committee to wait upon the board at their next meeting and request them to continue the office of county inspector of fruit pests.

The general sentiment was that the position had greatly benefited the fruit-growers in compelling many persons, who otherwise would not, to take active measures in destroying the pests, and that the orchards of the valley had been greatly benefited thereby; that an interest had been awakened among the farmers on this subject and on the preservation of their trees, and that, should it be abolished, much of the benefit thus far gained would be lost, for the valley is by no means free from these pests, which require the most active measures in preventing their spread and thereby working incalculable damage. No matter who might occupy the office, it was thought that it should be one constantly maintained by the county.

Pescadero Grange.

MESSRS. EDITORS:—Various causes delayed the election of the officers of Pescadero Grange until March, and the installation until the first Saturday in April, when the following officers were installed by Past Master Woodhams of La Honda, assisted by Mrs. B. Hayward of Pescadero:

M., I. C. Steele, Pescadero; O., E. Leighton, Pescadero; L., M. Woodhams, La Honda; S., B. Hayward, Pescadero; A. S., Mrs. G. H. Piper, Pescadero; C., Mrs. M. R. Ellis, Pescadero; T., B. V. Weeks, Pescadero; Sec., Mrs. L. Chandler, Pescadero; G. K., Mrs. E. Leighton, Pescadero; Ceres, Miss M. Leighton, Pescadero; Pomona, Miss Laura Weeks, Pescadero; Flora, Miss Jennie Thompson, Pescadero; L. A. S., Mrs. Anna Weeks, Pescadero; Organizer, Miss Emily Leighton, Pescadero; Trustee, M. Woodhams, La Honda.

Pescadero Grange is the only one in San Mateo county, and when it is known that some of its members travel 17 and others 14 miles to attend Grange, some of the obstacles to be overcome will be understood. Yours fraternally, I. C. STEELE.

Beware of Discounting the Future,

A gentleman, who appears to have known what he was talking about, lately told the *Visalia Times* why it is that many farmers are always "hard up" and compelled to struggle for a living.

He said he had noticed a great many agents traveling through the country in the early part of the season, when crop prospects were most favorable, and they were reaping a rich harvest off the farmer in selling him numerous articles, to be paid for after harvest, that he could just as well have done without.

The number of farmers who were sporting fine buggies, drawn by horses wearing decorated harness, for which they had given their notes bearing one per cent per month interest, due at harvest, was noticeable.

An instance was cited where a farmer had purchased a buggy, a two-horse wagon,

a breaking cart, a windmill, and several other articles, all on his prospective crop. To-day that rancher's crop is a failure, and when his notes come due in July and August next he will have to mortgage his home for money at an exorbitant rate of interest to pay them, and from that time until next harvest will stint himself of the necessities of life that the mortgage may be lifted. In case of another failure of crops the man will find himself financially ruined. If he had waited until he harvested his crop before making such investments he would have been in a condition to weather two or three dry seasons, and in the long run would have been able to ride a "high horse" without fear of molestation by creditors.

Such instances, we are sorry to say, are not rare in any part of California.

List of Grange Picnics.

Contra Costa County Granges, at Danville.....May 5
Sebastopol Grange, at Morris' Grove.....May 12
Yuba City Grange, at Hock Farm.....May 15
Magnolia and Grass Valley, at Indian Springs, May 25
Bennett Valley Grange.....May 26
San Joaquin County Granges, at Lodi.....May 18
Pescadero, San Mateo County.....May —
Tulare County Granges.....May —
Secretaries are requested to send in dates of picnics yet to be held as soon as possible.

Executive Committee.

The adjourned meeting of the Executive Committee takes place on Friday of this week, after we go to press. But little business was transacted at the former meeting in April. We are in hopes to have some thing of interest, however, to report in our next issue.

CONTRA COSTA GRANGE PICNIC.—The Granges of Contra Costa county will hold their picnic at Danville to-day. Bro. Loucks has arranged to have conveyances ready to take visiting Patrons to the grounds from the train. The carriages will be in waiting on the arrival of the early Sacramento and Stockton trains at Martinez, and will return in time for late San Francisco trains. The Saturday morning train from San Francisco will arrive at Martinez too late for these conveyances, so that those going from S. F. will be obliged to start Friday afternoon and stop over at Martinez until the following morning. It is expected that several of the State Grange officers will be present.

JOINT PICNIC OF MAGNOLIA AND GRASS VALLEY GRANGES.—Bro. J. W. DeGolia advises us that Magnolia and Grass Valley Granges will hold a picnic at the camp-meeting grounds, Indian Springs, May 25th. The locality is in the farming country, and eight or ten miles from either Grange. Bro. DeGolia says: We expect the W. L. and perhaps the W. M. of the State Grange to be with us.

OREGON STATE GRANGE.—The Oregon State Grange will convene in Salem on May 22d. Reduced rates have been made on the O. & C. Railroad and reduced rates for hotel accommodations have been made at the Chemekete hotel.—*Herald Disseminator*.

DISGUSTED WITH THE OLD PARTIES. One hundred citizens of Woodland have requested the local papers to call a non-partisan convention to nominate municipal officers. The citizens claim that both the old parties have sold out to the liquor dealers.

THE HARVEST FEAST given by Bennett Valley Grange last Saturday, though not largely attended, owing to the busy season of the farmer, was none the less a success.

THE FLOWER FESTIVAL at LOS ANGELES, so vividly pictured by our local correspondent last week, ran its course with joy, and came to a successful close Saturday evening, April 28th, after 11 days and nights of beauteous brilliance. The judges found themselves embarrassed by the great merit of the competitors, and by the fact that there were but two prizes to be given in each class. They were relieved, however, by the officers of the society adding \$200 to be used in special awards. Alhambra won the first prize for design, \$100; and Long Beach, second, \$75. For general excellence, having in view, 1st, the beauty of the display; 2d, artistic effect; 3d, neatness; 4th, variety and number of flowers, Santa Monica's exhibit was awarded the first prize, \$200, and Alhambra the second, \$150. The special fund was apportioned as follows: \$100 to San Fernando and Pacoima, \$50 to Anaheim, \$35 to Mr. Lyons, and \$15 to pansy exhibit. "Inglewood" was accorded most honorable mention. The total receipts for the festival were \$14,335.96. The expenses will be but about \$500, leaving a handsome profit for the Orphans' Home.

Developing Kern County.

EDITORS PRESS:—The people of Kern county have been putting in some "hard licks," not upon a barren soil and boulders, but upon a virgin soil, which has responded bountifully in all the varied industries that have been thoroughly tried. Stock-raising, dairying, wool, hops, cotton, fruits and nuts all prove remunerative. To one who has given this section but slight attention, our water supply is a matter which immediately becomes interesting. Two gentlemen from Los Angeles stated that in a large ditch taken from the north side of the river flowed more water than the entire supply south of Mojave desert, and it is a fact that today three-fourths of the volume of Kern river goes to waste.

One prayer of the Kernites has been for some one to move in the subdivision of land and development of the county, and this blessing seems about to be heaped upon their heads. Gen. E. F. Beale owns several thousand acres of land adjacent to the old military post—Fort Tejon—to which he was appointed in 1852 and which has been under his personal supervision or ownership since. A survey of the S. J. V. R. R. passes through this tract longitudinally, and a right of way has been granted to the road conditionally.

The General is a warm friend of Kern and its shire town, Bakersfield. His plans are perfected for surveying, subdividing, developing water (of which there is an abundant supply), and establishing a town. These lands are to be sold to actual settlers, and in small lots to suit the wants of men of limited means. For a number of years the General has been cultivating a portion of this tract, so that he is now able to demonstrate its quality by placing before the inquiring visitor a full line of the products of his possession. Ripe oranges picked from the tree or fine thoroughbred stock are evidence in the case which none can gainsay.

The General is now upon the grounds to direct the movement of his forces in this great task which he has undertaken. Judging from the general bearing and social position of the man, we bespeak for him success, and hope that many cultivated and desirable people will find homes upon these lands.

We are also informed that Mr. Henry Miller of Miller & Lux has matured plans for subdividing a portion of the land held by said firm. All these movements are pleasing the people of Kern because they are not a selfish class, but wish to divide the good things of this life with their less fortunate fellows. Any who are interested may learn by following subsequent notes how we here in what is generally represented to be a sickly, deadly climate, laugh and grow fat. The rattling, yellow coin is very conducive to health. W.

Bakersfield, April, 1888.

Floral Fair Next Week.

We mentioned in our last issue that the benevolent ladies who manage the S. F. Women's Exchange were planning ere long to hold another flower festival. They have now so far completed their arrangements as to announce that the beautiful display will take place in a store on Market street, under the Grand hotel, opening Wednesday, May 9th, and continuing throughout the week.

The exchange was set on foot a little more than three years since, to aid needy women in making sales of their work, and has grown healthily and steadily, until now its beneficent work is carried on in central and convenient rooms at 116 Sutter street. The report of the president for 1887 shows that the class for whose aid the exchange was started has been paid nearly \$16,000 for articles disposed of. The Board of Directors this year includes Mrs. John F. Swift, Mrs. Moses Hopkins, Mrs. Henry Wetherbee, Mrs. S. W. Forman, Mrs. Michael Castle, Mrs. John Curry, Mrs. Samuel D. Mayer, Mrs. H. L. Dodge, Mrs. Louis Sloss, Miss Birdsall and Mrs. Rosalie Kaufman.

Prizes are offered as follows: For displays of potted plants—best, \$25; second, \$15; third, \$10. For the best display of roses a prize of \$25 will be given; second, \$15, and third, \$10. A prize of \$5 will be given for the best display of cut flowers.

Wells, Fargo & Co. contribute to the festival by giving free carriage to all boxes of flowers intended therefor. A grand concert is expected, under the management of Henry Heyman. And with the prestige of successes the ladies and their patrons may well anticipate a delightful and profitable display.

SAN JOSE'S DISPLAY OF FLOWERS was opened on Saturday last (somewhat in advance of the date first fixed upon, to give the excursionists from this city an opportunity of enjoying it) and is in successful progress the present week, with throngs of amazed and delighted visitors in attendance. We shall try to give some account of its varied beauties in a future number.

A GRAIN DEALER'S SUSPENSION.—Lewis W. McGlaufflin, grain-dealer and commission merchant, 309 California street, made an assignment for the benefit of his creditors on Tuesday of this week. He was entangled with the Dresbach-Rosenfeld wheat deal. He expresses a hope that his assets will prove equal to his liabilities, and that he may soon be enabled to resume.

News in Brief.

DESTRUCTIVE floods in Texas have done damage.

THE State Treasurer of Nevada has on \$465,248.45 in coin.

THE Chicago anarchist paper, the *Alarm*, has suspended publication.

EARTHQUAKE shocks were felt at a number of towns in California on Saturday last.

THE main tower of the New City hall in San Francisco will be 420 feet in height.

REAL ESTATE to the value of over \$2,000,000 changed hands in San Francisco in April.

A PROPOSITION is being agitated to make a closed season for fur seals all over the world.

THE steamer Ancon brought 10,000 seal-skins from Alaska on her last trip to Seattle.

THE Fort Bragg Redwood Company's saw-mill was burned on Saturday. Loss, \$50,000.

A CONTRACT has been let for large iron and steel works at the Snoqualmie mines in Washington Territory.

HUGH O'HARA has struck a 25-barrel oil well in Santa Paula canyon, not far from the town of the same name.

STOCKTON'S Board of Trade has asked the City Council to call an election to vote on the issuing of bonds for constructing a system of sewerage.

A SYNDICATE of Tacoma capitalists have purchased of the Northern Pacific railroad 60,000 acres of land in the Sunnyside country, Yakima county.

SUBSCRIPTIONS to nearly \$81,000 have already been taken in Yreka toward the \$100,000 capital stock of the Yreka branch railroad to Montague.

CONSUL MONOGHAN writes from Mannheim, Germany, that the recent increase in the German tariff on wheat and flour practically closes the market against American grain.

THE recent order of the War Department, directing that regiments ordered to change stations do so by marching, will probably lead to the retirement of several decrepit officers.

THE work of laying rails on the Santa Rosa and Carquinez railroad is being pushed through with great rapidity. Great efforts are being made to complete the road by the 1st of June.

GOVERNOR WATERMAN has, for reasons best known to himself, made a rule that hereafter no paid attorney will be allowed to come before him to plead in behalf of an applicant for pardon.

NEVER before in the history of Castle Garden has the proportion of paupers, cripples, lunatics and generally objectionable persons among the arriving immigrants been so great as it is at present.

THE piles and material for the new wharf and chute at Point Arena are being hauled and put in erecting condition. The piles will average over 45 feet in length and 14 inches in diameter at the small end.

THE Pixley people are arranging for the largest rabbit-drive that has yet occurred in the San Joaquin valley. A grand barbecue will follow the drive, and a great time is expected. The date has not yet been set.

THE Fresno Milling Company has secured the contract for supplying the Government with flour for the Department of Arizona, New Mexico and Southern California. This is the fourth time it has secured the contract.

B. F. LANGFORD of Lodi, a stockholder in the Mokelumne Irrigation Co., was convicted in the Justice Court at Jackson, for maintaining a dam across the Mokelumne river, near Lancha Plana, unprovided with fish ladders, and was fined \$250, or 100 days in jail.

THE steamer Queen of the Pacific sprung a leak while at sea, but was successfully brought into Port Harford before sinking. No lives were lost. It is found that a deadlight had been broken or left open. The vessel is being pumped out, but all the cargo is badly damaged.

ATTORNEY-GENERAL JOHNSON, in an opinion relative to which one of the two Boards of Fish Commissioners was entitled to hold office, has decided in favor of the old board, Joseph Rottier and J. Downey Harvey; also, Charles Josselyn, who was appointed by Gov. Waterman, vice Sherwood, resigned.

It is stated that a heavy syndicate of Texas capitalists has completed arrangements for shipping a fine quality of yellow pine lumber from the heavy forests of Texas and Louisiana to Southern California, over the Southern Pacific, and that prices will be reduced from 35 to 50 per cent. The arrangements for shipping the lumber have been completed with the Southern Pacific.

It appears that the sugar refineries have an overplus of sugar on hand just now, and the matter of its disposal is becoming a momentous question, more especially in the case of the American Company, which has about 6000 tons of raw Hawaiian sugar aboard vessels lying in the stream, with no means of discharging or storing it. Both the American and California warehouses are full.

THE public sale of the Araquipa ranch took place Saturday on the property near Vacaville. A large excursion left San Francisco, and, connecting with the one from Sacramento, resulted in landing on the grounds over 1000 people. About one-half of the property was offered, comprising about 50 parcels as announced by the auctioneers, and resulted in a total of \$114,000, producing an average of about \$275 an acre, and including a small portion of improved property.

Rest.

[Written for the RURAL PRESS by MAUDE S. PRASLER.]

Some day, dear tired heart,
Will come your rest;
Though under daisies laid,
You will be blest.

Faith brings its own reward,
Soon will it come;
Rest comes to few on earth,
Never, to some.

Yet, if our faith is firm,
Close to His feet,
All of our troubles past,
Rest is complete.

The Newly-Discovered Eden.

[Written for the RURAL PRESS by A. M. R.]

Southern California, the land of contrasts and surprises, is an enchanted world to the lover of nature. The pure air of its hills, its brilliant sunshine, its varied scenery, are all exhilarating to the imagination, give buoyancy to the spirits, and a sensation as if somehow the world had been made new for our enjoyment.

The perfect loveliness of the early morning gives one a feeling that it is a sin against nature to remain within doors, and a ramble or a ride is the only proper way of spending the hours of the forenoon.

The roads are as hard as a pavement, and though hilly and sometimes rough, the never-ending panorama of beauty which rewards the climb to the rugged summit is a more than sufficient recompense for the labor expended.

The blue-green of the sage interspersed with moss-covered rocks, the warmer-tinted greens of the waving grain, and the rich dark coloring of the live-oak in the valleys make up a landscape perfect in its shading whose beauty leaves a memory to be enjoyed forever; for to the soul who is able to appreciate the loftier moods of nature, there comes a sense of possession, a complete ownership unknown to the millionaire who has invested so many dollars and cents in a rare painting, and counts its value only in proportion to the amount of money expended in its purchase.

Emerson says no land proprietor owns the landscape. "There is a property in the horizon which no man has but he whose eye can integrate all the parts—that is the poet. This is the best part of these men's farms, yet to this their warranty deeds give no title."

This property, however, is not the *sine qua non* which the rushing, eager throng of strangers is seeking in our land at present, not the valuable commodity which has given impetus to the unprecedented boom, though no one can weigh the amount of enthusiasm wrought in some soul by the unconscious influence of a lovely landscape, and which in turn has found another mind with the idea of untold value contained in sun-kissed valleys and rolling hills, and so on, ad infinitum.

A refuge from the dreary cold of the Eastern winter, a picture of vine-covered hills, orange groves laden with the rare golden fruit, sunny days of repose, and last, but not least, the one paramount idea of the Yankee nation—a chance to make a fortune in speculating, the sudden haste to be rich, the insane greed of the gambler, the desire to receive something for nothing; all these mixed motives have sent a multitude to spy out the land and build homes in this corner of the world, which was once considered barren and worthless.

Many who have with simple faith given credence to the too highly drawn pictures, so freely furnished, are disappointed in the reality, and return to their former homes disgusted. Their ideal would be as impossible of realization as was the vision of the fountain of immortal youth.

There is no occult power in the atmosphere here which will furnish new lungs, ready made, exorcise rheumatism in a few days' time, or give perfect contentment to a restless mind.

Poor human nature is a long way from perfection yet in every line, and there really seems to be a greater lack of harmony between the brilliant, cloudless days which make up our climate and the shortcomings of mankind than is felt elsewhere.

When Nature is gaily ringing the higher notes of the scale, if man must take up the refrain in a lower key, the result must be a jangling discord, a lack of correspondence with the environment which is often pitifully described as a "fish out of water" feeling.

It is not easy, either, after one's ideas have been raised to an expectation of entering a Garden of Eden, highly improved according to the latest horticultural rules, with luscious fruit of all kinds just ready to fall into the watering mouth of the weary traveler; at least, it is something of a jump downward to commonly developed imaginations, to take up the

prosaic, matter-of-fact view of things which must be accepted sooner or later.

If mankind in the innocence of the early childhood of the race abused the privilege of a paradise given him for enjoyment without effort of his own, and was sent out to eat his bread in the sweat of his brow as a step upward in the scale of being, a necessary adjunct to his increase of knowledge, the many inventions he has sought out, his wider range of thought, his restless ambition, have not given him a right to expect reward without labor; he still needs the brakes put on, the discipline of toil and endeavor.

To those who are willing to accept the inconveniences attending a state of transition, who enjoy watching the first beginnings of all parts of the social state, those who can safely bear transplanting—for there are natures which can no more be torn from old associations with security to happiness than some choice plants whose fibrous roots will not accept new conditions—to those who have vitality and depth of character enough to expand in the strange environment, the climate of Southern California offers a renewed lease of life—a widening of the mental horizon, a quickening of the pulse of happiness which well compensates for luxuries and conventionalities left behind.

Very few of those who are seeking our climatic advantages are aware that they are coming, in any sense, to a new country, which in reality is the case.

True, some portions of its area have long been inhabited by Spanish and Mexican families, but their improvements have been circumscribed and separated by long stretches of waste land. The character, too, of their former principal industry, the management of large flocks of sheep, has added nothing to the natural resources of the country, but on the contrary has been a continual drain.

But with the new regime all this is rapidly changing. Large fields of waving grain are replacing the stretches of sagebrush, old adobes are crumbling, and the less picturesque Yankee habitations hastily constructed of redwood boards take their place.

Orchards and vineyards are being planted, here, there, and everywhere, and in a few years the expectation of fruit in abundance, which is so often sadly disappointed now, will be fully realized.

Happily the craze for founding cities has run its course; the demand for white stakes is decreasing. The citizen whose time was fully occupied in making up corner lots can more profitably, to the well being of the country, elevate his attention to the needed improvements on the same.

They say the boom has burst. Perchance the blister needed pricking, anyhow, and the result will be a quick healing and a healthy growth of flesh, and muscle, and bone.

Already the feverish excitement which saw no need of improvement on land so rapidly advancing in price from the impetus of the boom is abating, and as for those whose ambition ran in but one channel, the addition of another town to the "thousand and one" cities which Joaquin Miller tells us have been laid out in the past 12 months, and which, he says, will surely be built in time; if these wide-awake people have not yet begun to plant the fine trees that he tells us are to go toward the building of the larger number of them, they are still very largely giving their time and attention to the planting of a great variety of fruit and ornamental trees, and no doubt if the demand for cities grows imperative before the unplanted forests shall grow, Yankee ingenuity will find some way to obtain material for their construction, for our sunny climate is very stimulating to all those characteristic traits inherited from the inventors of wooden nutmegs.

Therefore no one need be deterred from seeking a home in our fair land because poetic license has placed the building of our laid-out cities so far in the future.

If we have the vine and the fig tree ready, the will, no doubt, can soon find a way to provide a habitation.

Fallbrook, San Diego Co.

OLD AMERICAN CITIES.—In the *American Magazine* for May, William Eleroy Curtis will begin a series of illustrated articles on "The Oldest of American Cities." The first paper will deal largely with Carthage, which was the first city founded on the continent, although several colonies had previously been established on the near-by islands and a fortress had been built at Panama. The city became the rendezvous of the Spanish galleons that went to South America for treasure, and consequently a most tempting field for pirates. Incidents in relation to these, together with descriptions of the large churches, palaces and other buildings, afford great scope for an article of this character, and Mr. Curtis has taken full advantage of the opportunity.

EDITORS are the kindest-hearted people in the world. A subscriber to a certain paper died a few years ago, leaving 14 years subscription unpaid. The editor appeared at the grave when the lid was screwed on and put in the coffin a palm-leaf fan, a linen duster and a receipt for making artificial ice.—*Exchange.*

UNDER the new system of recording convicts, no one who escapes can fail to be reidentified. Arms, legs and fingers are measured, the size of the feet is taken, and in some cases facsimiles of ears and nose are preserved in plaster.

The Future of Santa Barbara.

[Written by Albert F. Kercheval of Los Angeles, and read at the Fruit-Growers' Convention in Santa Barbara, April 12, 1888.]

Where the tall Sierras gleaming
Gaze upon the slumbering sea,
Like a maiden rapt in dreaming
Of the future years to be,
Sits she in her rose-wreathed Eden
Where the ocean laves the lands,
Like some pensive tender maiden
Stretching forth her yearning hands,
Land of plenty, hope and gladness,
Flower and fruit and wine and oil;
Here no winter's maniac madness
Comes to mock the laborer's toil!
Here no frenzied storm's cyclonic,
Here no snow king's bitter breath
With its fury wild demonic
Comes to scourge with woe and death.
All the schemes of mad ambition,
Power and lust are put away,
And the trees with full fruition
All the laborer's toil repay.
Zephyrs from the soft seas drifting
Lull the soul to dreams of bliss,
O'er the lands sweet perfume wafting
Like some tender maiden's kiss.
Of thy future and thy story,
Of thy budding promise high,
Of thy grandeur and thy glory,
Who shall dare to prophesy?
Touched with magic of Aladdin,
Changing at the mystic sign,
All the gifts that please and gladden
In the future shall be thine.
Fain while yet the Present lingers
Would we read the fairy tale,
Lo! with reverent, trembling fingers
Let us lift Time's mystic veil!
Lo! we see a dim procession
Fleeing from the Northern blast,
Marching forth to take possession
Onward, westward, pressing fast!
From the far-off Eastern regions
Where the bitter frost assails,
Comes the tramp of murmuring legions
Hasting to thy flowery vales.
Here where Santa Ynez gazes
Like some tender, wistful bride,
Dream-rapt through her purple hazes
O'er the ocean's shimmering tide;
Where the brave old padres founded
Empire mid the lonely space
In a holy faith unbounded,
Other empire takes its place.
Empire fairer, nobler, grander
Than hath sprung from fire and sword,
Than the mighty Alexander
Conquered with his ruthless horde.
Where Castilia's dark-eyed daughters
Watched the sunset's dying gleam,
Dreaming by thy cry: "I waters,
Other maidens sigh and dream.
Like the clouds of twittering swallows
Hasting to their nests in spring,
Crowd on crowd impatient follows,
In thy sweet vales clustering.
In thy bowers of beauty blended,
Here they rest at life's decline,
When the heat of day is ended,
Each beneath his fig and vine.
'Neath the olive's glistening burd'n,
Or when noontide spreads its calm
Dream within the rose-wreathed garden
'Neath the trembling, waving palm.
Here amid the vacant spaces
Soon thy countless spires shall rise—
Temples of all creeds and races,
Pointing proudly to the skies.
Every slope with grapes shall redden,
Every olive-shadowed height,
Every glen in verdure hidden
Gleam a vision of delight.
Fairest flowers and fields elysian,
Golden groves and blooming bowers,
Greet the weary wanderer's vision,
Soothing life's fast fleeting hours.
Softest tints o'er vale and mountain,
Softest zephyrs on the shore;
Sea and sky, and fruit and fount in—
What hath earth to offer more?
Here beneath thy towering mountains,
Gazing o'er thy wave-washed strands,
Resting by thy crystal fountains,
Who would roam in alien lands?
Let old Europe's peasants grovel
Slaves to kingly power and lust,
Like the beasts in pen and hovel,
Prone in wretchedness and dust!
Let the East her idols cherish
'Neath old Asia's hopeless sky,
Like the brutes that grope and perish—
Let them toil and sweat and die!
Tell me not of sleepy Naples
Where corruption taints the breeze;
Here are freer, happier peoples,
Here are brighter, softer seas.
Here no lazy lazzaroni
Through the live-long, tender day,
Dreaming but of macaroni,
Does life's sweet gifts away!
All thy subjects, true and loyal,
Yield submission to thy claims;
All thy families are royal,
Nobler far than Europe's name.
Where thy roses shed their luster,
Blest with plenty, hope and peace,
Here thy countless homes shall cluster,
Rich in all of earth's increase.
Here the sails shall gleam and thicken,
Gliding o'er thy placid sea,
And a million heart-throbs quicken
In thy future days to be.

My First Sweetheart.

[Written for the RURAL PRESS by DOROTHY SHIRLEY.]

It was the summer I was seven years old that I met him at the birthday party of a little friend. He was ten, but so short for his age that we were nearly of a height.

My short brown hair was curled, and I wore a white Swiss dress with hand-embroidered sleeves and tucker. I also wore my most cherished possession, a coral necklace; and was so happy that even Charlie's round, freckled face looked pretty to me.

I remember he was very nice to me all afternoon, swinging me a long time, and then letting me beat him at croquet, till I, suspecting his deceit, threw down my mallet, saying I thought it as bad as cheating. In my heart, however, I thought him a very nice boy to let me beat him every time.

I was very fond of a paper I was taking, the *Youth's Companion*, and offered to let him read it. His mother was dead, as was mine, and he had no dear "Auntie Mamma" to love and care for him. I told auntie about him, and she promised to be good to him and love him a little; because I said, "He has no darling auntie as I have."

He used to come often to our house after that, and we had very nice times. I was the only child in our large, pleasant home, and was often lonely.

We were not old enough to fancy ourselves in love. I know he never even kissed me—
auntie wouldn't have liked that at all.

What pleasant afternoons we spent together out under the apple trees, sometimes white with fragrant blossoms, and later on loaded with crimson and golden fruit.

Often we read—sometimes from the same book. When tired of reading, he would lie contentedly down in the grass, watching the lovely white clouds like banks of snow against the blue sky, and listen while I told him stories I had read, or more often wrote, marvelous tales of knights of old and ladies fair, of horrible serpents and nine-headed dragons, of granted wishes and happy years as a reward of virtue.

Many an afternoon has lengthened into quiet evening, while I sat and spun my glittering romances, regardless of time, till, roused by a faint snore from my attentive listener, I started a grand romp by pulling his hair in revenge. Clear in my mind is the memory of many pleasant winter evenings when we played Casino and Old Maid, while we ate pop-corn and apples.

I think such childish love rarely lasts; ours did not, and with the memory of our happy hours together before me, I shrink from trying to recount the details of our miserable little quarrel. I have not seen him since it happened, years ago, but I think I shall always have a warm corner in my heart for my first sweetheart—homely, honest, good-hearted Charlie Gray.

Educating to Dishonesty.

The fathers and mothers of the country, who are trying to bring up their children in "the nurture and admonition of the Lord," or even those who make no definite religious profession, might have been rather unpleasantly surprised if they could have had the privilege of listening to a remark with which a teacher closed a lesson the other day, before a large class of 14-year-old pupils. He had been gleefully showing them how a little "crooked" book-keeping could be safely done with considerable advantage to their own pockets and with very little risk of discovery.

"You see, boys, how easy it is to be smart in business, if you only keep your eyes peeled and know what you're about."

One of these boys reported lesson and the comment verbatim to his indignant mother, who at once went with the story to the chairman of the committee of the school. He did not share in the indignation—quite the contrary. The story pleased him highly, and he advised her "not to make mountains out of molehills; it was too silly a thing to make such a hue and cry about, and she couldn't expect, anyhow, could she, to run the school her own way?" No, unhappily, she could not expect that, therefore she availed herself of the only liberty left her—she withdrew her son from the teacher's pernicious influence. There was no other school to which he could be sent, so he was put to work in a wholesale grocery store at \$3 a week. "Of course it puts an end to his education," she said sorrowfully, "but I would rather he would know nothing—I would rather see him dead—than under the tuition of such a man as that." More than one mother—a good many fathers—would feel the same way. Are they to make no protest, to be debarrd from any expression of opinion on such vital matters? It is interesting to speculate on the probable result if each mother, not alone this poor widow, had withdrawn her son from the class at the same time and for the same cause. It is hardly likely that the salary of the teacher would have been increased \$250, as actually happened later.—*Caroline B. Le Roy, in "Woman" for April.*

THE man or woman who comes to California for health, says an exchange, should spend every moment out of doors that he can. It is outdoor climate, not indoor climate, that California boasts of.

YOUNG FOLKS' COLUMN.

Our May Queen.

Written for the RURAL PRESS by ADLAIDE SAMSON.]

Whom shall we choose for our Queen of May?
Shall it be Bess, so pretty and gay?
Winsome and bright-eyed with golden hair,
Surely none could wish a queen more fair.
Bess met a beggar but yesterday,
And she roughly bade him go his way—
No, not Bess our Queen of May shall be,
Our queen must be more than fair, you see.

Shall we choose Nell for our Queen of May?
Stodious Nell, whom none disobey;
Clever and wise is our learned Nell,
And who can parse or cipher so well?
But clever Nell is not always kind,
There is a wisdom, not of the mind—
No, not Nell our Queen of May shall be,
Our queen must be more than wise, you see.

Shall we choose Maud for our Queen of May?
Maud possesses a fortune, they say;
A score of servants attend her call,
She is mistress of a princely hall.
But Maud is haughty and scorns the poor,
She turns the wanderer from her door—
No, not Maud our Queen of May shall be,
Our queen must be more than rich, you see.

Shall we choose Kate for our Queen of May?
Not clever is Kate, nor rich, nor gay;
Kate possesses no beauty of face,
Nor does she boast of a lordly race.
But Kate's eyes glow with a gentle light,
Her speech is mild, she strives to do right—
Yes, yes, Kate our Queen of May shall be,
Kind hearts are worth more than all, you see.

New York City.

Freaks in the Barnyard.

[Written for the RURAL PRESS by AUNT RENA.]

Having just read the "Rooster's Family" in the RURAL PRESS reminds me of the story of an old gobbler we owned at one time. He was a fine old fellow, and when a wife was finally given him, nothing could exceed his pride and pleasure. He strutted, gobbled and cooed around his bride from morning until night.

At last the old hen was missing for almost a month, when one morning she came to the door with a young family, at which the fatherly air of proprietorship of the gobbler was really wonderful to see. In a few days the gobbler began to care for the little charges, and a funnier sight could not well be imagined, for the old fellow was so large, his neck so long and his "snout" had such a funny in-the-way look! Then he would coax, squat and seem to have such a time trying to get the little ones to hover. No one could look at this great unwieldy, awkward, long-necked fellow hovering his brood, with drooping wings and tail, without laughing. He looked so humble, with yet such a protecting air.

The old hen was absent a portion of each day, when she would return and try to assume her maternal duties; but the little ones stood shy of her and clung to their paternal protector, and the mother gradually let go her care and finally was again entirely missed, when at last she brought forth her second brood. This time, though the gobbler evinced much pleasure at sight of his young progeny, yet he clung to the first brood, scratched, hunted dainty bits in the shape of worms, and hovered them just as their mother would have done, at the same time giving no further attention to his wife and her second brood, the whole care of which he gave over to her. To his mistress it always seemed as though he should have shown some paternal affection for the second brood, instead of which, if one of the little fellows ventured too near, he would give it a little peck with his bill, which would send the luckless chick peeweeing back to its mother.

At another time a gander was the special wonder of the barnyard fowls and the little folks. One spring we thought to raise geese, so 18 goose eggs were bargained for and "set" under six old biddies. At the end of six weeks one lone gosling came forth which was a perfect prodigy in size, color and form. Even his mother looked in round-eyed astonishment at the wonderful size and actions of her chick. Still like the most of mothers, the maternal tie was strong, and she watched, hovered and scratched as persistently and industriously for this independent, disobedient gosling as if he had been a real chick. It was not long before he was as large as the old hen, which he persistently followed, despite her efforts at weaning.

As he grew in age and size, he assumed airs and privileges, until he was the acknowledged master of the barnyard.

Each spring he would select a hen which he would guard with his life if need be, and when she would come off the nest with a brood of young chicks, he redoubled his care. He would fight a person who ventured to even come in the direction of his adopted charge. Neither roosters, hens nor hawks dared intrude. In fact, he was such a quarrelsome and vicious fellow that we had little sympathy for him, and even "sicked" Dido at him. This little dog was a queer, quick-motioned, bob tailed creature not so large as the gander, but when we pointed at him the dog gave chase and caught the gander by the neck, and we thought his day had come, but Dido loosed her hold, when the gander caught her by the tail; then there

was flapping of wings and howls of pain. All battles end, and both combatants walked dignifiedly in opposite directions, victors. In later years the children made a playmate of the gander, leading him by the wings around the yard, and to the watering-trough, where it was his delight to swim and theirs to watch him. At the age of seven years we sold the gander to a neighbor who wanted "baked goose" for dinner, but the children reported "he was the toughest goose! We boiled and boiled him all day, and then we could hardly bite him he was so tough."

Queer Things in Arizona.

EDITORS PRESS:—It has been so long since I have written to the RURAL that I expect most of the old people who read the RURAL have forgotten my name, and many of the young people never heard of me. However, I have been reading the RURAL all the same.

But what I want at this time is to tell the young folks something new. Were I to write up my journal that I have kept the last four years (and I may do so one of these days), there would be many things therein new to the young readers of the RURAL. At some other time I may tell you of riding an Arizona blackamoor horse into a herd of antelope, and of looking down the perpendicular banks of the great Colorado, where it is more than a mile down to the water; of the fierce Apache Indian, and how I rode the blackamoor, just because he snuffed and snorted at moccasin tracks. But this time I will talk about an ethnological hunt. Now get the dictionary if you don't know who or what about ethnology.

Where I am now living there was one day a city, with houses that had great walls around them, and these people had large churches and every church had an altar in it. One large church that I visited last July, just as the workmen had excavated the altar, there was plain to be seen on the altar the evidence that a child not two feet long was on the altar when the building fell in. Other marks and signs proved that people were standing round the altar at the same time. Lieutenant Frank H. Cushing is commanding a large force of men and mules, who are delving and plowing and using scrapers and picks and shovels, digging up these temples and cities and towns. This work is the ethnological hunt. When Lieutenant Cushing gets his book printed, he will tell you of his find. But I will tell you of my find.

Not long since I was digging a ditch, that passed just to the east of an old wall, when I dug up a glazed earthen pot and a queer-shaped, glazed earthen animal image. They were small; the two would not weigh above six pounds. The pot was the shape of an old-fashioned inkstand, and in the small bowl was a black substance that seemed as if it had once been burned with a great heat. The animal image seemed to be placed as a guard over the pot. The beast was a queer-looking fellow. He had the body of a goat, legs like an elephant, tail like a bear, neck and ears like a bear, but the face and nose and mouth and lips were like the camel's, broad and thin. But the queer part is, this beast held up his head and neck very high, about as high as a dog does when he is howling.

You young people frequently enjoy working out enigmas and puzzles. Can you tell us who put this howling-beast image and the pot of carbonized substance down on the east side of this wall, two feet below the surface of the surrounding soil? Both the pot and image stood on a solid lime-cement floor. I notified Lieutenant Cushing of my find, and he now has a part of his force at work near my house.

In my next I will tell you my views of the howler and the pot, and will tell you of the tombs, crematory furnaces and of the phrenology of some skulls found here in these tombs. Tempe, Arizona. GEO. KAY MILLER.

PROFESSIONAL DUSTERS.—That dusting has been made a difficult household art by the accumulation of bric-a-brac in our houses, says the Boston Journal, is proved by the new occupation of bric-a-brac cleaning. It is known that in New York, women who clean ornaments go from house to house, making a remunerative employment for themselves. They possess a delicate touch, and have especial brushes for the purpose. The chief fault of amateur dusting is the haste with which it is done. Look at the duster in a large crockery store. She wipes each article with a cloth, carefully and slowly, and when necessary, polishes the surfaces thoroughly. Her leisurely manner is in great contrast with that of the average housemaid, who whips her cloth rapidly over the surface. A visitor to Holland says that the weapons of a Dutch cleaning woman are cloths and chamois, "brooms and brushes, scrubbing brushes for the floors, hair brushes for the wainscots, feather brushes for the walls, tooth brushes for the corners, geese wings for the stoves, hen's feathers for cleaning out the keyholes, small sticks of wood for poking the dust out of cracks in the floors." It is no wonder that the Dutch house is burnished brightly.

RAILROAD ACCIDENTS.—A French writer says the percentage of deaths and wounds from railroad accidents is only about one-quarter as great in Europe as in the United States.

GOOD HEALTH.

Female Physicians in New York.

There are 150 female physicians in New York, and the number in Brooklyn and the surrounding cities about doubles that. Among those in New York City there are quite a number who have incomes of \$10,000; two or three make yearly sums ranging from \$15,000 to \$20,000, and one has averaged for the last four years a steady income of \$25,000. Dr. Emily Blackwell is the President of the Woman's Medical College, and has besides a large practice. She has adopted children and makes a charming home for them. Dr. Mary Putnam Jacobi has a large clientele, and consults with the first male physicians of the city; indeed more than one physician has a regular female confrere, to whom he recommends some of his patients to go for special courses of treatment. Several of these female practitioners are house physicians to hospitals, and the Lucretia Mott Hospital in Brooklyn is entirely officered by them.

Some women physicians work in partnership with each other, among whom are Drs. Eliza M. Mosher and Lucy M. Hall of Brooklyn, and the two sister doctors, Sarah and Julia McNutt. Dr. Sarah has charge of the babies' ward of the Post Graduate hospital, and Dr. Julia has founded a training-school for nurses. Both are physicians in high standing, and have a large practice, especially among children. Drs. Annie Daniels and Kate Parker are both women of influence and of the widest-reaching charity. Dr. Elizabeth Cushman is a celebrated anatomist and successful ovariologist, and yet is a small, feminine, quiet-voiced little woman. Drs. Lozier, Post, and Faunce are all well known for good work. Without exception, these women are quiet, well bred, gentle-mannered and soft-voiced. One lonely young woman, whose physician was of the same sex, said a short while ago: "When I am homesick and miss my mother, I go and talk ten minutes to my dear doctor, and I come home quite happy again."—N. Y. World.

A NEW TREATMENT FOR BOILS AND CARBUNCLES.—In a communication to the French Academy of Medicine, at a recent meeting, M. Verneuil says: The topical applications (prominent among which stand the carbolated and borated solutions) employed in a certain way, and particularly in the form of powder used repeatedly and for a long time, are of remarkable efficacy, and at the same time are absolutely harmless and easy of application. These applications of powder, with few exceptions, arrest the progress of the disease in the gravest cases, ordinarily cause the pains to quickly cease, reduce the fever, disinfect the purulent and gangrenous centers, hasten resolution and promote the formation of healthy granulations. This treatment is suitable for all regions, and for all forms and periods of the disease. It is never harmful, and leads to a cure in a large number of cases. It assists surgical interference when that is necessary. Finally, it tends to prevent auto inoculation and general infection.

A NEW ANTIDOTE FOR RATTLESNAKE POISON. On the morning of March 29th, says the Indiana Farmer, Mr. M. B. Smith, who works in a Southern Express office, at Atlanta, Ga., was bitten by a rattlesnake that lay concealed in a crate of cabbage. As he placed his hand upon the crate he felt a stinging sensation in one of his fingers and saw that a huge snake had fastened its fangs in his flesh. In a few seconds the hand and arm began to swell and Mr. Smith was driven hurriedly to Dr. Gaston's office. Dr. Gaston saw the young man was in danger of losing his life and he gave him a hypodermic injection of permanganate of potash—a solution of two grains to a dram of water. This antidote to snake poison was first used by a Brazilian physician, and its efficacy was so great that the doctor was given a handsome reward by the Government. The treatment relieved Mr. Smith immediately and he was sent to his home. From last accounts he was doing well. Dr. Gaston is of the opinion that Smith would have died but for the timely antidote administered.

INSECTS IN EARS.—Few troubles are more annoying or more productive of serious difficulty, if not removed, than insects in ears. Lying upon soft meadow grass, or sleeping upon a camp-bed of fragrant spruce, bugs of different denominations seem possessed with a desire to inspect our auricles. Once inside, their frantic efforts to escape cause such agony that people have gone temporarily crazy with it. This may be instantly stopped by pouring the ear full of sweet oil, which suffocates the insect, and he is easily removed later by a syringe and warm water. Avoid intruding pins, etc., into the ears. Much harm may thus be done to their delicate mechanism, and little to the cause of all the trouble. If oil is not readily accessible, use water, which is almost as good. Earache in any form may be quickly relieved by filling the organ with chloroform vapor from an uncorked bottle, vapor only, not the liquid.

THE HOT-WATER CURE.—The results of the hot-water cure are said by a physician to be the stimulation of the stomach at first, but after repeated use a lessening of the tone of the digestive tracks, which causes congestion and dyspepsia. Hot drinks tend to lessen bronchial irritation, and may be used profitably in some cases of consumption.

DOMESTIC ECONOMY.

Delights in Grapejuice.

One man of the present deserves well of his day and generation, and that is the man who has brought fresh grapejuice in use again. The absolute luxury of a draught of pure grapejuice, just as it leaves the press, and filtered from sediment, is only to be judged by those who have tasted it. It is what it purports to be—wholly grapejuice, undiluted, unsweetened, unfermented, delicious as the wine in the cluster, innocent as mountain water, health-giving as the fountain of youth. It is the most beautiful liquid in the world—deep, rich in color as fluid gems, all fermented wines being pale beside it, for they are diluted, while this is the full blood of the grape of sweet and divine odor. Its effect is simply wonderful in restoring strength.

For years, daily, after working up to 11 o'clock mornings, there has come that reaction, the fatigue which writers and nervous people know, that no food or medicine ever seemed to relieve, and which made the rest of the day's work a dragging effort. A glass of the grapejuice changes all this, and on three or four glasses a day I work with an ease and sustained strength which make me a novelty to myself. It is food and drink both, like milk, only a thousand times better; and though no vegetarian or dietist, I had rather live on cracknels and grapejuice wholly than go without it. It banishes bilious and dyspeptic symptoms, humors and consumptive ailments, like magic. Here I stop, not for want of more to say, for this subject is barely begun, but it is best to leave each person to test it for himself. It is easily done. Any one can squeeze a pound of grapes in a towel and strain the juice for drinking at once, after the imperial court fashion ages ago. A delightful little hand-press with porcelain sockets, sold for \$2, does the work much better. Once people get a taste of this blissful fluid, there will be no danger of raising too many grapes in this country or any other, especially as it is perfectly easy to put up this pure grapejuice so that it will keep unfermented, unchanged, fresh as when it left the cluster, for 20 years. Don't say it can't be done; it has been done for centuries. You can taste it in New York shops fresh from the press before your eyes, and bottled for years, and can't choose between the two. The grape-grower whose intelligence provided this treat for the public has done a very good thing for his own profit, but a better one for the country, both for growers and consumers, and the next five years will prove the strength of these words.—American Garden.

LEMON BISCUIT.—One and one-half cups of sugar, one cup of butter, four eggs, 1½ pints of flour, one teaspoon of extract of lemon. Mix the butter, sugar and beaten eggs together, add the flour sifted with two teaspoons of baking powder; flour the board and roll out the dough one-fourth of an inch thick; cut out and lay on a greased tin; wash over with milk, and lay a thin slice of citron on each. Bake in a hot oven ten minutes.

TAPIOCA PUDDING.—Take six tablespoonfuls of tapioca and soak it in milk for some hours before you intend to use it; when you are going to make your pudding, put the tapioca into a quart of milk, place it on the fire, and, as soon as it boils, sweeten it to your taste and let it simmer for a quarter of an hour. Pour it into a basin and stir in a little fresh butter and three eggs well beaten. Bake one-half hour.

VANILLA CAKE.—Rub one cup of sugar with one-half cup of butter to a cream; add the whites of three eggs, one-half cup of sweet milk, two cups of flour, one teaspoonful of baking powder; bake in three cakes. Take the yolks of the three eggs, one cup of pulverized sugar and one teaspoonful of vanilla; beat together 15 minutes. When the cakes are cold or slightly warm, spread this mixture between them.

BEEF OMELET, which may be eaten cold for supper or warm for breakfast, is made of one pound of beefsteak, one-quarter of a pound of suet, salt, pepper and a very little sifted sage, one egg and three milk crackers; chop the beef and the suet very fine, roll the crackers to a powder, mix all together and bake in a shallow tin, or fry in butter over a slow fire.

ORANGE FLOAT.—One quart of water, the juice and pulp of two lemons, one coffee-cup sugar. When boiling hot, add four tablespoons cornstarch. Let boil 15 minutes, stirring all the time. When cold, pour it over four or five oranges that have been sliced into a glass dish, and over the top spread the beaten whites of three eggs, sweetened and flavored with vanilla.

BLACK PUDDING.—One-half cup each of sugar, butter and milk, one cup of stoned raisins, one teaspoon of ground cloves, 2½ cups of flour, one teaspoon of baking-powder; steam one hour. Sauce: Mix a little flour, cornstarch and water together; let it boil two minutes; add a small piece of butter, sugar and nutmeg.

MOLASSES CAKE.—One cup of molasses, one cup brown sugar, one cup of cold water. Boil together, then add a cup of butter and set aside to cool; flour as thick as a pound cake, add four well-beaten eggs, one pound each of raisins and currants, one-half pound of citron. Bake two hours.

The Week.

It is the first week of May, and the timely floral events multiply. Grand artificial aggregations of bloom have pleased admiring thousands in several of our towns, and natural collections by acres have delighted those who go forth among the wildlings on plain and hill-side. Both garden and field bloom are among the glories of California, and it is gratifying that as the latter are constantly narrowing by the encroachments of cultivated areas, the former are increasing in extent and in manifestation of taste and appreciation.

We are glad to see that the floral fairs are so carefully planned and richly endowed, because it shows that all our horticulture is not upon a commercial basis, and that though the country is new and our industrial arteries fairly throbbing with enterprise, we are not too sordid to be moved by the appeals of the beautiful.

THE President has appointed Melville W. Fuller of Illinois Chief Justice of the United States.

Partisanship.

There is no contagion more subtle than partisanship, and we are all liable to catch it. It is a sort of malaria in the air and we are apt to become badly poisoned by it before we are aware of its existence. It is hard to cure for the reason that the infected victim is under the hallucination that it is something good to have. There are seasons when it rages epidemically, and there are indications that we are about coming into one.

The usual symptom is an unreasonable attachment to party, and when one has got the distemper very bad he imagines his party is the sole depository of all that is true, beautiful and good, and whatever opposes its success is the enemy of patriotism and all righteousness. An election is called a campaign. The parties with banners and drums are arrayed in order of battle. Half the nation stands for truth, peace and prosperity, and the other half is supposed to stand for something very opposite. Combativeness mounts guard and takes the place of kindness, good-will and decency. Suspicion grows rank in such an atmosphere. The best words and deeds of an opponent are attributable to base motives. His opinions are unworthy of consideration, his arguments are not worth heeding. He is to be ostracised as the enemy of the country. In such a war there is no quarter, no neutrality, and the man who fancies he sees something good on both sides is denounced as a coward, trimmer or apostate. He is pelted with the meanest epithets. The fate of the nation is declared to hang on the success of a party; its triumph gives an assurance of peace and prosperity, and its defeat is portentous of disgrace and disaster.

And what is strange about all this fuss and splutter is that the partisan is not conscious of a selfish zeal or ignoble motive. His zeal is holy zeal, and it is likely to impel him to the use of dangerous motives and the perpetration of very unholy acts. He says all is fair in war; the end sanctifies the means; we must fight fire with fire; we must beat the devil with his own weapons. The enemy is corrupt, therefore there is no harm in using corrupt on. The enemy lies, we may lie in return. He vilifies, we must get even with him. This is what may be called the retaliatory stage of the disease.

But it does not stop there; the partisan soon reaches the last stage of the disease. He no longer cares for the truth, seems to like a big, round, plump lie the better, as it hurts harder. He rejoices in iniquity. He justifies the immoralities of his own managers, and magnifies the weaknesses and infirmities of the other side. The plans of the campaign must not be too sharp'y looked into; the platform must not be criticised. You must shut your eyes and swallow the whole dose prepared by the political doctors and ask no questions. One must be badly rattle-headed that expects to have clean hands while handling the guns. One thing at a time; after the battle he can take a bath. The result is that our elections become battles of stinkpots. Falsehood follows inuendo, calumny reinforces suspicion; every miserable subterfuge, mean evasion and petty concealment is resorted to. The atmosphere is black with the lies shot from one camp to another.

Already the pestilence is in the air. It is likely to grow worse till next November. Would it not be well for us all to be on our guard against the first approach of the disorder? Surely it is our duty to be charitable to our political opponents, and award to them the same patriotism and honesty we claim for ourselves. All is not fair in war. No honorable man will fight the devil with his own weapons. Purity of your own party is worth more than a triumph, honor is more to be prized than a victory. Search for good motives, not evil ones. There is good and bad in all parties, and let the one without sin cast the first stone. If half the country were as bad as the other half says it is, the whole

thing would go to pieces like a ball of quicksilver. The heart of the American people is in the right place, vote as they may. Have faith in it. Be proud of your party if you like, but prouder of the American people.

Apricots.

The apricot is again the great sensation in the fruit industry. The great yield of last year has induced many of the older trees of certain varieties to take a rest this year. More than this, some other unfavorable influences have been at work, perhaps, and the shy Moorpark shows its customary disposition, with or without reason. All accounts of the Blenheim go to approve the estimate of this variety which we have already given in the RURAL. We hear from widely distant regions that the Blenheim is full this year, though it bore a large crop last year. The tree may not fill as the Royal does, though it sets full enough sometimes to need thinning of half its fruit. In the University collection at Berkeley, the Blenheim is the only one of 20 varieties which bears a full crop this year. Many varieties which fruited heavily last year are almost empty this year. We will give fuller data on this point at another time.

Apricot prices are lifting fast now and canners are scurrying around to secure supplies. Buyers are thicker than laborers in the fruit regions. Sales are already pressing hard upon the three-cent mark, and many are using their apricots to sell peaches, which are more abundant. It looks very much as though it would be difficult to get enough apricots this year to fill canners' orders, and the poor people who learned last year how good California dried apricots are may have to wait awhile for more of them. But there are plenty coming. The following dispatch from New York, May 2d, shows that supplies are small:

California evaporated apricots continue to move out well into consumption, and the previous strong tone of the market is retained. For good, fair stock, 14c is quoted the inside, and at this figure only limited quantities are available. Fancy is held at 16c. The entire stock of this market is said not to exceed the equivalent of 800 boxes.

Crop Prospects.

The San Francisco Call of Wednesday morning contains two columns of brief reports, giving the condition of the crops on the first day of the current month in over 30 counties of the State. Their general tenor, as to grain and hay, is quite unfavorable, and recent drying winds have made the absence of rain yet more discouraging.

Summer-fallowed wheat, however, is doing fairly well in many districts—especially north of San Francisco bay—and may even reach an average crop in the more favored places, provided there be rain within a week or two; but as to this, "everything depends upon the weather." Winter-sown wheat, for the most part, is decidedly below the average, and in some localities will hardly make first-class hay.

Reports from San Luis Obispo and adjacent coast counties are rather more hopeful in tone than those from the great interior basin, and moist spots here and there, even in the San Joaquin, give better promise than the average, while Los Angeles expects "the biggest crop of wheat the county has ever known," but such reports are exceptional. Hay, too, as a general thing, is light and feed scanty.

In the extreme southern counties, however, recent rains have proved very beneficial to the barley; and the aspect of fruit trees and vines throughout the State is highly satisfactory and cheering to orchardist and vigneron.

PUBLIC affairs are active. The Republican State Convention has met in Sacramento and chosen delegates without pledging them for any candidate for the presidency. The U. S. Supreme Court has decided in favor of the railways in their refusal to pay taxes levied under the New Constitution of California. Abroad there are the usual sensations and rumors, and at home there is peace, except the tiny conflicts in Congressional halls.

SILK CULTURE.—On and after May 10th the rooms of the State Board of Silk Culture in the Flood building, at Fourth and Market streets, will be open to the public between the hours of 11 A. M. and 3 P. M.

Hints for a Dry Time.

The promise of a storm, which seemed very good a few days ago, passed without much accomplishment, and we are now fast approaching a time when a downpour would be of doubtful value, because of the mixed good and evil which it would entail. A good wetting would be of great advantage to the newly-planted orchard and vineyard area, and it would maintain the growth of pasture-plants much later than they now seem likely to hold their verdure; but much of the grain has gone too far to be helped either for grain or hay. So far as orchard and vineyard interests are concerned, they can be materially helped by unusually good cultivation. Keep the surface well pulverized and evaporation will be checked and nearly all the moisture now in the soil will be held for the use of the roots. Read again the excellent article on cultivation by Gen. Chipman, which was recently published in the RURAL, and then practice what is there taught. This will save many trees planted this winter, and will cause others to make quite satisfactory growth. In older orchards and vineyards it will give larger fruit and save the trees from exhaustion. Ill-kept trees and vines will have a hard time this year unless the cultivator makes frequent visits to the soil. How a person can have enterprise enough to plant trees and then be negligent enough to let them stand famishing and dying, with the baked crust rapidly giving out the moisture to the air, is a thing hard to comprehend.

In some places where the amount of water has been insufficient, even when conserved by careful cultivation, those who desire to save the money expended in this year's planting, and to save a year's time, also, must prepare to water the trees or cuttings. It does not need a river nor any appreciable part of one to save newly planted trees or vines. Of course where irrigation by running water can be had, it should be used moderately, and be followed by good cultivation; but even where this is not to be had, and where all the water has to be had from well and pump, it is not necessary to let the trees perish. Rig up a water-wagon in any way your ingenuity may suggest, and haul the water to the trees, giving each a couple of bucketfuls, and then surface the ground finely with the hoe. How often this must be done depends upon how leachy the soil is or how well the surface can be pulverized. When the number of trees is small, and a mulch of finely-divided manure can be had, it will pay to apply a mulch and then pour the water through it. The tree will tell when it needs water by the spirit of its foliage, and when it begins to appear dejected start out the water-wagon. This is troublesome, it is true, but it affords a way by which a few dollars expense will save a hundred in money and in satisfaction.

Extra effort should be put forth for the livestock as well as the trees. All the straw should be saved, and if there is a moist place on the ranch or a small area which can be irrigated by windmill or small steam-pump, proceed at once to put in a summer crop of forage. A small piece of wet land, which, perhaps, is useless in a wet year, can now be broken up and mellowed as much as possible, and a crop of Egyptian corn or sorghum cane, or mangelwurzel may be sown. All these, if fed with cut straw, will save great expense for purchased feed-stuffs, and will prolong the milk yield or the satisfactory growth of young stock. Great progress has been made in the last few years in the growth of the different kinds of sorghum, and cattle are not likely to suffer as they have in some of the earlier dry years of California.

Fortunately there will not be the loss and inconvenience from scanty rainfall now which were experienced a decade ago. We have now vastly more land under irrigation. The great artesian interests of the interior have developed, and the water supplies other than these have been much increased. But small crops or the total loss of returns in some cases will, nevertheless, press heavily, and it will require fortitude to meet the experience. But it is not a time for repining. The aggregate produce of the State will be great, the general activity and increase in values and the welcome features of the outlook more than compensate for any temporary accidents of a season.

THREE steamers were sold last week at Astoria to go to Alaska in the interest of Alaska fish-packing companies.

The Beet-Sugar Enterprise at Watsonville.

We have followed the progress of the beet-sugar enterprise at Watsonville quite closely, because of the possibility of the much wider extension of the industry to other parts of the State. On Saturday last the construction had progressed so far that the corner-stone was laid and the occasion was made one of note in the community by a celebration. The directors of the Western Beet Sugar Co. went down from San Francisco and were met on arrival by a large concourse of citizens. Of course cheering and other expressions of popular interest were not wanting; the California populace may be trusted for energy in that way when the occasion suits.

From the depot the visitors were escorted to the Mansion house, and after a repast headed an immense concourse of people, who, accompanied by a band of music, marched to the site of the Western Beet Sugar factory, adjacent to the town of Watsonville, where, after the usual formalities of speeches, the corner-stone was laid. Claus Spreckels expressed himself pleased with the good-will manifested by the farmers in complying with the instructions issued in regard to planting of the beet seed, of which an extensive acreage is being carefully cultivated in the valley. Julius Lee, orator of the day, spoke very forcibly of the noticeable union existing between capital and labor, and amid vigorous cheering, predicted a successful termination of this great enterprise. The corner-stone, of Penryn granite, with the usual space for relics, was put in place by President Spreckels, after a few well-timed remarks.

The factory will be ready for operations by September 1st. Twenty-nine carloads of machinery have so far been received at the factory, and 18 more will complete that portion of the plant purchased in Germany. Besides the above there are still 48 carloads to arrive from American manufactories before the plant is complete. The 2500 acres contracted for to be put in beets are all seeded. The beets are up and look well. The capacity of the factory will be 350 tons daily, which will be doubled next year.

Now that the manufacture of beet-root sugar starts forward with renewed strength in California, it is interesting to see what Germany has done to supply herself with home-grown sweets from the beet. It is telegraphed from Washington that Consul Warner's report concerning sugar-beet culture in Germany contains facts not before printed. He says that the improvements made in the year of 1886-87 in the manufacture of beet sugar wherein the direction of simplifying the separation and purifying processes, as also in a saving of material and work, especially in the treatment of the juice with sulphuric acid, and improved methods of filtration, were more frequently adopted, while the use of bone and charcoal has been almost given up. There are now 201 factories, of which 197 extract juice by diffusion. The production during the year of 1886-87 was 198,562 tons, and there were exported 48,938 tons of raw sugar, while the imports were only 146 tons of refined and 176 tons of raw sugar.

It is exceedingly desirable that a country like the United States should not be subject to outside regions for sugar. If Germany has so far succeeded that she is an exporter instead of an importer, surely the United States, with such decided advantages in the growth of sugar-yielding plants as are found on this coast and in some other parts of the country, should not despair of success. There is great promise in the present effort, and we trust we are just upon the threshold of full realization of it.

WILL LIME PREVENT BLOATING?—A dairyman who was brought up in a limestone country informs the *Eureka Standard* that cattle there never bloated from eating green feed. This has led him to believe that lime in water prevents bloating. He has followed the practice of putting from one to two gallons of lime, every week, in the water-troughs from which his cattle drink, and none of his cattle give him trouble by getting bloated.

CRANBERRIES IN WASHINGTON TERRITORY.—Three years ago, according to the *Olympia Standard*, A. J. Burr began to cultivate New Jersey cranberries at Oyster Bay. He has lately realized \$400 on a shipment of vines to Coos Bay, Oregon, and expects to ship large quantities by and by.

Irrigating Sidehills from a Ditch.

[Written for the *RURAL PRESS* by S. W. SHAFER.]

All who have tried irrigating on a hillside know how difficult it is to keep the water evenly distributed. Of course a flume is good, but it costs money and always needs patching. Here is my plan: Cut six inch-boards into 14-inch lengths. I split mine out of firewood, sharpen one end and bore two holes, as shown in the sketch. Cut the ditch-bank and drive a

SHAFER'S DEVICE FOR TAKING WATER FROM HILLSIDE DITCHES.

board at each place where you want water turned out. Regulate the supply by driving down the boards, and shut off the water by plugging one or both holes with grass or mud. By always using the same quantity of water, once regulating the depth of the boards will last a season.

stinate legs." Taking a stout string from his pocket as he talks, he proceeds to tie it tightly around the ear of the balky animal; then taking up the lines says: "Get up, Jim," and Jim "gits." It is comical to see him step off, with his head on one side, and sure enough he has forgotten all about balking and does not try it

SECTIONAL VIEW OF BOX FOR THAWING GIANT POWDER.

The trouble is, the holes plug up with trash, but that trouble applies to all ways of spreading water, and the trash is good for the land. By cutting out the boards on the dotted lines, they do not choke so badly. Drive the boards well to the inside of the ditch, or you leave a niche for mud to eddy into. On well-sodded ground the roots soon close around the boards so that they may be pulled out when much water is wanted.

I bore inch holes an inch apart in the clear, and the upper one four inches from the top. It pays me to occasionally put on gum-boots and paddle through the ditch and slum out the leaves and sticks. These boards should be made in winter, because if the boards are not made then they will not be made at all, for who ever knew of a rancher fixing up anything in the busy season?

STARTING A BALKY HORSE.—M. A. Gage writes the *Oregonian* that he and his son have a big horse which was much inclined to balk, and before they got him had been badly used in various ways in trying to break him of the exasperating habit. But now, whenever he flies back and says, "No! I won't pull this time," the young man lays down the lines and talks to him after this fashion: "Won't pull, eh? Decline to work, do you? Well, I'll give you something else to think about besides your ob-

Thawing Out Giant Powder.

In view of the fact that so many high-g explosives are being used in clearing land of stumps and timber, in construction of irrigating ditches, etc., it is proper that we should suggest a method which will obviate the many accidents which happen in some parts of the coast in thawing powder. There are proper means for doing this, but they are not always taken advantage of. Mr. Wm. O'Keefe of Helena, Montana, sends us sketches of a box intended for thawing powder, which can be made by any one. It will thaw out the powder in 20 minutes, and keep it in condition for three or four hours after the candle has gone out. The box may be placed in any convenient place and needs no watching, as the candle cannot be blown out. It is made out of a candle-box, and three short pieces of candle will work it 24 hours.

One side of the candle-box forms the top. The box A is 17 inches long, 9 inches wide and 10 inches deep, with sides extending half an inch above the ends. It is covered with paper on sides, bottom and top, and then half-inch board sheathing put over that. B is the top or lid of the box to lift off. Around the outer edge and on top of the lid is tacked a strip of old gum boot-top with the lining side down to keep the joint close. The lid should have an eight-inch play so it will come off easily, and the rubber extends over and covers up the open joint.

C is a piece of tin 6x13 inches, nailed to the bottom of the lid to reflect the heat downward on to the powder. D is a piece of board 3½ inches high to form a bin at each end of the box. E is a rack on top of the board D on which to rest the powder. F is a bin filled with oatmeal or buckwheat. It is partly covered by the rack E. This will retain the heat a long time, and if the powder should "melt" the drops cannot explode by concussion. Charcoal dust should not be used.

G is a piece of board covered with tin, and there are two pieces of hoop iron nailed upon it to grip the candle. They do not extend entirely around the candle, so the grease will drop down and cool. This is lifted in and out. H represents the candle, four inches long, and I is the handle to the lid.

Mr. O'Keefe devised this box last winter and has used two of them while he has been running some tunnel work. The boxes work to perfection, he says. The powder was not easily thawed on the bodies of the men in that cold climate, and the time lost, and danger with a stove, is well known. In this box the sticks are thawed to the center, and one may go at any time and find the powder ready.

A three-eighths hole should be put on the side near the bottom of the candle, and two should be made in the lid. If the candle will not burn, more holes may be made in the lid. Care should be taken not to make too many holes, however, as this will result in cooling the inside of the box. As Mr. O'Keefe says, carrying powder makes some men sick, and when put in a boot it is only half-thawed. Hot water cannot always be procured, but this box furnishes a good and safe means of thawing powder.

FEEDING ALFALFA.—The *Colusa Sun* rightly remarks that alfalfa should never be pastured. In the first place it will pay better to cut it and feed it to stock. There is an immense waste in having a lot of stock in on a rank growth of alfalfa. The waste is more than what is eaten! The great objection, however, is that if pastured the weeds are allowed to grow while the alfalfa is eaten down. It is evident that in this way the weeds soon take the field, but if it is cut the whole is taken down together, and when given a fair chance alfalfa will not be rooted out by any weed. If a person has even as many as 10 or 12 head of stock to feed, he will find that it will pay big wages to mow it and haul it out to them. A field will feed three times as much stock and save the grass from being killed out by weeds.

SCOTCH SPUDS FOR TEXAS.—Treasurer Hopkins of the S. P. Co. recently stated that their steamers between New York and New Orleans were carrying quantities of potatoes destined for points in Texas that had been shipped from Scotland. They were being purchased of the New York consignees of Scottish wholesale houses.

CAPT. S. S. TURNER, of Sonora, the *Democrat* says, has been appointed by the Commissioner of Agriculture an agent for the statistics of Tuolumne county in the matter of fruits, garden produce, cereal products, and for furnishing all data concerning the material wealth of the county.

CONSUL WARNER reports to the State Department from Cologne the rapid extension of beet-sugar cultivation. It has been increased over 500 per cent in 12 years.

THE Cogswell Polytechnic College on Folsom, near Twenty-sixth street, is approaching completion, and the internal fitting is now being pushed rapidly.

AGRICULTURAL NOTES.

CALIFORNIA.

Amador.

THE EXPERIMENT STATION.—Jackson *Dispatch*, April 28: We visited the Viticultural Station grounds last Sunday, and found that the work of clearing, grubbing and plowing for the present season was about completed, and the fencing will be completed in a few days. The buildings will be erected on a prominence, below which may be seen like a beautiful picture the rolling hills around Jackson, and the broad Sacramento valley still further on. There will be nothing done in the way of experimental farming this season.

Butte.

GOOD GRAIN.—Oroville *Register*, April 26: The wheat and barley crop in Butte will this year be fully up to the average, even should not another drop of rain fall. There will be some fields where nothing will be grown, and some where the crops will be very light, but these will be more than offset by the big yield on the black lands of Biggs, Nelson, Durham and other localities. These black lands will have as fine a crop from the present look as they ever yielded, and here is where the great bulk of Butte's 40,000 tons is produced. At Dayton, above Chico and in other places we also hear reports of fine grain, so it is safe to assume that the crop will be above the average.

Colusa.

EFFECTS OF IRRIGATION.—Colusa *Sun*, April 28: John Cheney has land under the Cheney slough canal which can afford water in winter. On the west side of the slough he has a field checked into five checks. The bank of the slough is high and of rich sandy loam, and the west edge of the field runs off into pure adobe. It so happened in watering that he got the two western and the two eastern or high ones watered well, but the middle one on account of the levee breaking was not watered. He sowed barley on the whole of it at the same time. To-day the crop in the middle check is a failure, while the checks on each side, the pure adobe and the high sandy land, are as fine as can be produced. In fact, a man riding over the country this year has to be blind physically not to see what irrigation will do, and blind with prejudice not to acknowledge it. The canal has cost Mr. Cheney about \$3.50 an acre, and he will pay it twice over this year with the difference between what he will have and what he would have had.

A BLESSED BREAK.—Chico *Enterprise*, April 23: Last winter there was a break in the levee opposite Princeton, which at that time was considered very unfortunate. Frank Steele, whose farm is near the break, informs us that he had about 70 acres flooded. These 70 acres are good for a big crop. The rest of his land may have half as much if we have favorable weather. P. V. Berkey, foreman of Moulton, says that about 3000 acres of that farm were flooded, and that it will have an immense crop, where there would not have been half as much without it. We estimate that the break was worth more than \$25,000 to Moulton. Everybody on the line of the overflow—all of whom cursed it—fared as well. Berkey says he never worked so hard in his life as he did to stop that break! What a lesson is here for irrigation!

SUMMER FALLOWING.—Willows *Journal*, April 27: Summer-fallowing is being pushed considerably in this vicinity. On the Rideout ranch near Germantown 22 eight-horse teams are at work, and on the Zumwalt place 10 eight-horse teams. These ranchers are firm believers in the summer-fallow system.

Fresno.

RABBIT DRIVE.—Fresno *Republican*: Although the record of deceased rabbits was not so large as on some former occasions, the drive given for the entertainment of the visiting members of the N. S. G. W. Grand Parlor was a splendid success, so far as the enjoyment of the affair is concerned. It was estimated that the line was eight miles in length. Fires were built in the dry weeds near the outside of the line, and many rabbits were smoked out of their hiding-places. Some of the boys had failed to procure clubs, and these armed themselves with empty bottles which were thrown at the rabbits with great force. The marshals did their duty in fine style, preserving the best of order as long as order was necessary. After the rabbits were all in the corral the boys waited for a few minutes till photographs could be taken, of which Mr. Foster and Mr. Butler each secured several. Then the killing began, and the work was short, sharp and decisive. The rabbits were thrown in piles and their number was estimated at from 2000 to 3000.

Humboldt.

SHEEP INTEREST.—Eureka *Standard*, April 26: George Kneeland, whose sheep range is at Blocksburg, says he has more old sheep now than he had last spring, notwithstanding he sold off 600 head for mutton last fall. His loss this year is not greater than the average. Last year he marked 1200 lambs and this spring he marked 1000. Cattle did better last winter than usual and are in fine condition. Mr. Kneeland has evidently been exceptionally fortunate with his flock. Most of the sheepmen in this county estimate a loss of at least one-third of the old stock and comparatively few lambs raised. Robert Porter of Hydes-

ville says he does not think the loss of sheep on their Fort Baker range has been very large, but at Laqua they have lost heavily of their fine Spanish merino flock. At the last-named place they had among the flock about 2000 yearling Spanish merinos, nearly full blood, and as these sheep are very tender and the winter was severe, he apprehends a very heavy percentage of loss. He agrees with other sheepmen that the increase by lambs this season will not make the loss of old stock good.

Lassen.

RECLAIMING THE WASTE PLACES.—Susanville *Mail*, April 25: O. A. Anderson informed us one day last week that the Lassen Land and Live-Stock Association is vigorously pushing their irrigation scheme along, and at the present time has on a force of 13 men and 12 horses. Work was commenced on the 12th instant, and it is expected the ditches will be finished in about six weeks. Two ditches eight feet wide at the top, four feet at the bottom and two feet deep, will receive the water from the reservoir in Round valley, through 24-inch pipes, and be carried down upon the lands to be reclaimed. They have a good supply of water, as the reservoir has an area of about 125 acres now under water which ranges in depth from 8 to 12 feet. This grand scheme will utilize many acres of land that have heretofore been useless.

Mendocino.

HE SHOT THE BRUTE.—Ukiah *Dispatch*: Jno. Mewhinney's fine Holstein bull, which killed his keeper two weeks ago, knocked Mr. Mewhinney down last Friday afternoon, and would have killed him had not Jess Pickle been there and fought the bull off with a pitchfork. Mr. Mewhinney, on getting up, deliberately walked to the house, secured his rifle, returned and killed the vicious animal.

Modoc.

A LIVE-STOCK FARM.—Alturas *New Era*: The ranch of Flournoy Brothers, ten miles east of town, is used exclusively for raising cattle and horses. The residence is surrounded by a large meadow from which is cut 300 tons of hay per year. The surrounding hills furnish range for the firm's cattle—several hundred head. The firm are the owners of seven or eight fine-blooded stallions and one jack, the latter valued at \$1500. The celebrated horse St. Lawrence is owned by the firm. He was sired by Canadian Wonder, whose tail dragged upon the ground three feet, and his mane reached the ground. St. Lawrence is a blood bay with black points, weighs 1500 pounds and is the largest-boned horse for his size we have ever seen. At the State Fair in Sacramento in 1884 he walked a mile in 11 minutes and 26 seconds, and pulled a ton. The boys also own another fine stallion, called Dave, grandson of Rysdyk's Hambletonian. He is the sire of 55 colts, all bays and browns. He will be six years old in June. The donkey is three years old and is 14½ hands high. He took the first premium at Susanville last year. He was sired by a fine California jack out of an imported jennet.

Napa.

PROPAGATING THE OLIVE.—Napa *Register*, April 27: J. A. Canfield, lately from the East, having purchased five acres of nicely-situated land in Hartson's Addition to Napa, west of the Court House, has built thereon a glass-covered building 15x36 feet in size, for propagating the olive. The interior shows a line of boxing down the sides and one end, the height of which when filled with sand is that of an ordinary table. The boxing is 12 inches deep, perforated at the bottom with holes and filled with fine San Joaquin sand, in which a number of hands were busy yesterday planting 30,000 cuttings just received from the nursery of W. A. Hayne, Jr., in Santa Barbara county. As soon as these are ready for transplanting they will be set out in nursery on ground prepared for them. Mr. Canfield has taken pains to secure the very choicest cuttings and is confident that the olive industry will prove one of the most popular and lucrative known to California. He will build a home for himself and family on the tract, which is also to serve as a nursery.

AMBITIOUS ALFALFA.—Colistogian, April 25: The 64 inch stem of alfalfa mentioned in this paper last week is exceeded in length nine inches by another found in Lake county, a paper there boasting of the fact. During the past week there have been brought to this office three stems of alfalfa which measure respectively 74, 79 and 85½ inches. Later in the season measurements will very likely exceed 100 inches.

Placer.

A CHOICE FARM.—Newcastle *News*, April 25: The Elliott farm, lately sold to Mr. Wm. Byers of Ontario, is within three-quarters of a mile of town. It is said to be one of the best sheltered, most productive, and most profitable fruit farms in the Newcastle fruit district, which has already gained a national reputation for the excellence of its fruits. To give an idea of the productiveness of the soil, there are now growing in and bearing upon the place raspberries, blackberries, cherries, apricots, nectarines, prunes, figs, plums, grapes, peaches, apples, pears, Japanese persimmons, Japanese plums, oranges, butternuts, English and black walnuts, and English filberts. There are also Monterey cypress, palm, umbrella tree, and other ornamental trees and shrubbery.

RANK RYE.—On Monday of last week L. B. Thurman brought to the *Republican* office a remarkable specimen of rye from his ranch between Auburn and Lincoln. The sample con-

sists of about 35 stalks growing from one root, and many of them are fully six feet high.

Santa Barbara.

NATURE'S WAY OF THINNING.—Santa Maria *Times*, April 21: Isaac Miller, proprietor of the large apricot orchard adjoining town on the north, tells us that at least one-third of his newly formed apricots are decaying. A stranger looking at them would at once say that the orchard had suffered from a severe frost, but such is not the case. Mr. Miller states that the decay is caused by dead blossoms remaining on the trees and adhering to the fruit when forming. Where the fruit is clear of these dead blossoms it presents no sign of decay whatever. How the working of nature has produced such a result he does not understand. His trees are too full by a third, and perhaps nature has adopted this peculiar plan to rid the trees of their heavy burden.

AGRICULTURAL ASSOCIATION.—Lompoc *Record*: The articles of incorporation of the Lompoc Agricultural Association are prepared and are being quite generally subscribed to by the farmers throughout the valley. The capital stock is to be \$25,000, divided into 2500 shares of \$10 each. The object of the association, as stated in the articles, is to buy, sell, and improve land for fair and stock purposes and for buying and selling stock. In a very few years Lompoc and vicinity could arrange a most interesting fair, embracing all manner of fruits, vegetables and cereals with displays of as finely bred horses, cattle and hogs as can be found in any portion of the State.

GRAIN FLOURISHING.—Mr. Burton's ranch, the Jesus Maria, is covered with the finest crop of barley and wheat ever produced on those lands. The grain is four feet high over thousands of acres and cannot fail of a most profitable yield.

Santa Cruz.

IMPORTED OLIVE TREES.—Watsonville *Pajaronian*, April 26: James Waters received from France, this week, 50 rooted olive trees of different varieties. They will average about three feet in height, and arrived in good condition. They cost him 55 cents apiece in France and custom duties and freight charges made their cost over \$1 per tree. Owing to the great demand for olive trees and the scarcity of stock, the price in California for these trees has been considered high, but from the experience of Mr. Waters it would appear that the olive tree has a pretty high value in Europe. In comparison with European prices, the California figures for olive trees are very reasonable. Mr. Waters will keep this importation of trees for the propagation of olive stock.

HAND CULTIVATOR.—*Pajaronian*: Preparing the land for beets and planting the seed are branches of agriculture in which our farmers are well informed; but the problem of cultivating the beets after they make their appearance, at the smallest possible expense and with the minimum of labor, is a matter of deep interest to the farmers of this valley. A few days since we saw a hand cultivator in use at R. W. Eaton's, which might be studied with profit by some of the parties who are working to bring out a labor-saving beet cultivator. The machine we saw is in common use among the Chinese in the berry fields. By whom it was made we do not know. It has a handle like a rake or hoe, and at the end, lengthwise with the handle, are two hoe blades about two inches apart; extending from each blade at right angles is a sharp bar of iron, about an inch wide and nine inches long. The cultivator is placed over the row of carrots or beets—with an upright blade on each side acting as guide—the iron bars are forced into the soil to the depth of one or more inches, and the cultivator is forced along by hand. It loosens the soil and cuts the weeds, and for work among vegetables is just the thing.

Sonoma.

POTATO LAND.—Petaluma *Argus*, April 28: Any one familiar with potato-growing knows that it requires a moist, loamy soil for their profitable production. Sonoma county has always been famous for this valuable food supply. Just now our farmers are plowing their ground preparatory to putting in their crop. The best time for planting potatoes here is from the first to the middle of May. It has been found that they do better when planted after the rains are entirely over. We are independent of irrigation; the natural moisture is ample to mature the potatoes planted any time in May.

FINE BARLEY.—Santa Rosa *Republican*, April 26: S. Street brought to this office a bunch of barley grown on Alex. Skaggs' ranch at Skaggs Springs which is, finely headed out and measures five feet six inches in length. It is a second volunteer crop, last year the same piece of land raising 20 sacks to the acre. It will yield more this year.

FRUIT PLANTING.—Reports from various portions of the county confirm the predictions made in the beginning of the season that the fruit crop will be unprecedented. The yield of all varieties will be especially large and on account of the early warm weather the markets will be filled before the usual time.

Stanislaus.

ANOTHER WATER PROJECT.—Stockton *Independent*, April 27: Articles of incorporation of the Oakdale Irrigation Co. have been filed in the County Clerk's office at Modesto. The capital stock of the corporation is \$100,000 and \$17,690 has been actually subscribed. The

company contemplate diverting water from the Stanislaus river at or near Knight's Ferry. One of the officers of the Oakdale company has written to Mr. Shippee to ask for a copy of the by-laws of the Stockton corporation, with the assurance that the Oakdale corporation will have no conflict with the Stockton organization, as there will be water enough in the river for both enterprises.

Sutter.

CANNERY CONVENIENCES.—*Sutter Farmer*, April 27: The new addition to the cannery is almost completed, and the plan of receiving and taking care of the fruit will now be considerably more advantageous than formerly, as each department will be separate from the others and more room will be given to each. The fruit will be received at the east end of the new building and trucked into a 40x40-foot room, where it is weighed and sorted, then into the large cutting-room, 40x120 feet, where the cutters and corers prepare it for the cans. It is then carried into the canning department—40x60 feet—in the old building, where the canning, syrupeing and capping process is gone through; thence into a 40x40-foot cooking-room, where tanks of boiling water await it. After being taken out it is trucked to the east end of the building, near where it entered, and there stored preparatory to shipping. Besides these roomy departments the company has a large cloak-room for the accommodation of employees, situated in the old building near the office.

Tulare.

A REMINDER OF THE CARP CRAZE.—Visalia *Times*: Bravo lake, 12 miles east of this city, is said to be alive with the much-talked-of German fish—carp. Parties formerly engaged in raising these fish in ponds along the upper Kaweah have allowed them to escape into the river, and from there they have gone into the Wutchumna ditch and thence into Bravo lake. They are not caught with hook and line, and it is said will not nibble at bait, but as they feed on the grass along the shore they can be killed with a club. Fifty of them were thus killed in one day recently. They are not a desirable fish for the table and their propagation has been abandoned in this section.

Yolo.

RECLAIMING THE TULE.—Woodland *Mail*: The efforts of some of the enterprising farmers of Yolo county who have hazarded a great deal of money and labor in trying to utilize some of the tule lands along the river for farming purposes promise to be rewarded this season by a large crop. The water has not been high enough this season to even test the resisting power of the levees that have been constructed. The grain on these lands is said by parties who have been over that district to be looking exceedingly good. Teams are at work summer-fallowing a large area of the tule lands for next season. Near Knight's Landing, Hon. E. N. Hershey is building a levee some eight miles in length, which will protect a very large body of land. C. F. Reed's levee system above Knight's Landing is being improved every year, and it is eminently probable that within a very few years these overflowed tule lands, which are exceedingly productive, will be farmed quite successfully.

Yuba.

LAYS GOLDEN EGGS.—The Marysville *Appeal* has the following, from Charles Raish, about an orange tree which that old citizen prizes highly: "The tree was the first seedling planted in Marysville. It was planted by a man named Cass, in Cortez Square, 30 years ago, and was bought by me when three years old for \$1, orange trees then having but little value attached to them. If I remember rightly, a number of orange trees had been imported here by Ramirez and others a short time before, and of that lot only three live to-day. One at Dougall's, one at Kimball's in this city, and another at Bidwell's Bar. From the time my tree began bearing, it has always yielded a good crop annually, and one season I positively sold \$400 worth of fruit from it. William Couglan budded from it, and many of the trees which he now sells spring from that seedling." Mr. Raish says that the tree has been known to bear over 4000 oranges in one season; and in the years of 1871-2-3 it yielded from 3000 to 4000 each season, and the fruit was shipped to various parts of the United States. At one time he sold 50 dozen of the best ones in Virginia City to a dealer for \$100. A yield of 2000 oranges from this tree is an uncommonly small one, and is the crop of what he terms an "off year."

NEVADA.

CROPS IN PARADISE VALLEY.—Silver State, April 27: James Byrne, who for years has been farming in Paradise Valley, says grass and grain look as well as he ever saw them at this season in the upper end of the valley. In the lower part of the valley, however, water is scarce, and the prospects very unfavorable for the hay crop.

IS IT WILD RICE?—Last fall Fish Commissioner Carey sent a lot of wild rice here, in accordance with an Act of the Legislature, to be sown along the Humboldt. The rice was distributed from Lovelocks to Golconda, but as no one in this part of the country ever saw the plant growing, there is no certainty yet that the seed germinated and grew. A strange grass has made its appearance, however, in the sloughs on Stauffer & Sweetser's ranch, where some of the seed was planted, and the supposition is that it is wild rice.

PALM VALLEY! THE LOUISIANA TRACT!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land? DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost? DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State? DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10-acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State. No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

ENTOMOLOGICAL.

Insect Killing by Fumigation.

[An essay read at the Santa Barbara Convention of Fruit-Growers by D. W. CONQUEST, Los Angeles.]

I have been requested to prepare a paper on the process of fumigating trees for the destruction of scale insects, and my apology for not producing a better one is that its preparation was delayed until the last moment with the hope that I might be enabled to give some definite facts in regard to the practicability of transmitting the gas from one tent to the other after the first tent had been allowed to remain upon the tree a sufficient length of time to prove fatal to the insects; but the necessary apparatus for making tests of this kind is not yet completed, so I am unable at present to give any facts in relation to the transmission of the gas.

The process of fumigating trees for the destruction of insects consists briefly in inclosing the tree in an air-tight tent and afterward filling the tent with a poisonous gas that will destroy the insects without at the same time injuring any part of the inclosed tree. The earliest account I possess of any attempt of this kind is a copy of the specifications for a patent granted to Mr. James Hatch of Lynn, Mass., on the 14th of May, 1867. Mr. Hatch's method consisted in inclosing the tree in an inverted sack, and then filling the latter with the fumes of tobacco, pepper, and other noxious substances by the aid of a furnace and connecting pipe; but this method does not appear to have been very widely adopted. Dr. A. S. Packard, who for several years held the position of entomologist to the Massachusetts State Board of Agriculture, writes me that he is not aware that this method has ever been used in any of the New England States, and I can find no reference to its having been used in any of the States east of the Rocky mountains from the date of the Hatch patent up to the present time. It appears, therefore, that all the attempts at perfecting this method have been made here in Southern California.

Forms of Tents or Hoods.

In the earlier experiments the tent used in inclosing the tree was constructed in the usual round or circular form, with a rounded or dome-shaped roof, and was lowered down over the tree from above. It was found, however, that the apparatus necessary for this work, when operating on tall trees, was altogether too awkward or cumbersome to come into general use. To obviate this difficulty an opening or doorway was made in one side of the tent, extending from the roof to the ground, and when this doorway was opened wide, the tent could be put upon the tree without being elevated very much. After the tent is on the tree, the doorway is closed by bringing the opposite edges together and wrapping them one around the other, and to facilitate this, a piece of gas-pipe is fastened to the tent on each side of the doorway, and extending from the roof nearly to the bottom of the tent.

Mr. H. K. Snow of Tustin proposes using a tent of this kind, only having two doorways instead of one, so that after the tree has been fumigated sufficiently the tent can be passed forward off of the fumigated tree and upon the one next to be treated. He proposes operating the tent by means of an apparatus consisting of four posts fastened together at their upper ends, from which the tent is to be suspended, while the lower ends of these posts are attached to two runners, like those of a sled, so that the apparatus can be drawn forward astride of a row of trees. This is a very simple arrangement, and one that almost any fruit-grower can construct with his own hands, and at very little expense.

Mr. John P. Culver of Los Angeles, a civil engineer and a very practical man, has recently constructed a tent for inclosing the tree which, for simplicity of construction and ease of operating, is a great improvement upon anything of the kind ever produced heretofore. It is in the form of two half-tents which inclose the tree from one side, and consists briefly of two inverted U shaped arches fastened at one side with hinges to an upright mast mounted upon runners; the tent proper is in two sections, and is stretched upon these arches, so that when the tree is inclosed the sides of the tent will rest upon the ends of the branches. The inner surfaces of the two wooden arches which are to meet each other when the tent is inclosed are covered with a thick layer of felt, and the two arches are fastened together by means of a rope and pulleys. This apparatus is a great improvement upon the old way of letting down the tent over the tree from above, and I see no reason why it cannot be used upon the largest orange and lemon trees.

The Most Effective Gas.

After experimenting with a great many different kinds of gases, I have found nothing superior to hydrocyanic acid gas, produced by acting upon a solution of potassium cyanide with sulphuric acid. Much will depend upon the comparative purity of the cyanide used, and while it is not necessary that this should be chemically pure, still it should not contain any visible impurities. One of the best tests of its purity is to pour a small quantity of sulphuric acid upon some of the dry cyanide, and if it evolves the gas in the form of a whitish vapor, the cyanide is sufficiently pure; but if it simply effervesces without producing a visible gas, the cyanide will not answer the purpose. The dry cyanide should be kept in air-tight packages,

otherwise it will lose much of its strength. It is commonly sold in sealed tin cans containing one and two pounds each, and should be allowed to remain in these cans until ready to begin operations.

For rendering the gas harmless to the tree I know of no method superior to that of passing it through sulphuric acid. For this purpose the gas is generated in a closed leaden generator furnished with a leaden pipe leading into the top of a second leaden vessel containing sulphuric acid. The pipe from the generator should pass nearly to the bottom of this second vessel, and the gas will then be allowed to pass upward through the acid and by a second pipe will enter the tent which incloses the tree. After this the air and gas in the tent should be thoroughly stirred and the tent be allowed to remain upon the tree about half an hour. The acid through which the gas had passed can be used for generating the gas the next time, and fresh acid should be poured into the second vessel for the gas to pass through.

Objections to the Gas.

I will here briefly notice some of the objections that have been raised against the universal use of this method for the destruction of insect pests. Firstly, as to the poisonous nature of the gas and of the chemicals used in producing it. While due care in handling these poisons should always be exercised, yet with only reasonable care in this direction no evil results will follow. When Prof. Riley first advocated the use of Paris green for the destruction of the potato beetle, people in every direction loudly protested against the use of this poison, saying that its use would certainly result in the wholesale poisoning of children, farm animals, and by being carried by the plant to the tubers themselves, would thereby cause the death of every person who ate potatoes that had been treated with this poison; and yet at the present day no substance is more universally and successfully used against mandibulate insects than Paris green. Moreover, if the process of transmitting the gas from one tent to the other should succeed, as I believe it will, this will greatly lessen the danger of being poisoned by the gas, as compared with the present method of allowing the gas to escape into the air as soon as the inclosed tree has been sufficiently fumigated.

It is also claimed that only a trained chemist can manipulate the production of the gas, but this is not true, since any person of ordinary intelligence can accomplish this quite as well as a trained chemist could. Of course this part of the work should not be intrusted to any and every person, but this is equally true in regard to the other methods for destroying insect pests, and I am sure that your secretary will agree with me when I make the assertion that even the best washes that have ever been produced for the destruction of scale insects will, in the hands of careless and inexperienced persons, give only indifferent or unsatisfactory results. In the matter of fumigating orchards, it would doubtless be desirable for certain persons to purchase the necessary apparatus and then go from orchard to orchard, fumigating the trees at so much per tree, just as at the present-time hay-balers go from field to field baling hay at so much per ton.

Already the cost of the apparatus for operating the tent has been very materially reduced; thus, while those first produced, which let down the tent over the tree from above, cost all the way from \$150 to \$300, I am informed that the cost of the Culver Fumigator will not much exceed \$100, while the apparatus suggested by Mr. Snow should not cost over \$50.

The only real obstacle to the universal adoption of this method is the present high price of the potassium cyanide. For this I am obliged to pay in Los Angeles from 80 to 90 cents per pound, which puts the cost of fumigating an orange tree 20 feet tall by 14 feet in diameter, something over \$1.75 per tree. It has been the rule with every manufactured commodity, that when it came to be very extensively used its price diminished in the same ratio, and we may confidently expect the same thing to happen in regard to the cyanide. But this is a phase of the question which I must leave to the fruit-growers for their consideration.

Before closing I would like to give a little experience which I had in fumigating with tobacco. I had an upright earthenware furnace constructed, the interior of which measured about three feet high by eight or ten inches in diameter. This was constructed in such a manner that a Cumins blower could be attached to it for the purpose of firing up the charcoal, and it was furnished with a pipe for conducting the fumes into the tent. I filled this furnace about half-full of charcoal, and when this had been heated red-hot, I threw upon the hot charcoal about four pounds of refuse tobacco stems, connected the pipe, and allowed the fumes to pass into the tent previously placed over a small orange tree. The tent was removed from the tree at the expiration of one hour, and it was found that all the leerys were dead, as were also the black scales (*Lecanium oleæ*) and the soft scale (*Lecanium hesperidum*); but only a small percentage of the red scales (*Aspidiotus aurantii*) were killed, while the tree was uninjured. Whether or not this method could ever be used against the leerys on a large scale, I leave it to the fruit-growers to decide. It is certainly much cheaper than fumigating with the hydrocyanic acid gas, and almost every fruit-grower could raise all the tobacco necessary for fumigating his trees, and at very little expense.

HAWLEY BROS. HARDWARE CO.

— AGENTS FOR —

Adriance, Platt & Co.'s "BUCKEYE" MOWERS, the only Genuine
"BUCKEYES."

Adriance "Buckeye" Mower.

better evidence of their superiority and popularity than the above statement. Don't experiment by buying unknown and inferior machines.

The preference which has been shown for the harvesting machinery of ADRIANCE, PLATT & Co. by so many thousands of farmers in all parts of the world has nowhere been more decided than on the PACIFIC COAST, where their "Buckeye" Mowers and Reapers have so many years been recognized as STANDARDS OF EXCELLENCE IN PRINCIPLE, MECHANISM AND WORKMANSHIP.

The above firm has been manufacturing the original "BUCKEYE" machines for more than 25 years, during which time we have been their agents in California, and there have been in the meantime about 25,000 of their machines sold here, all having given the best satisfaction. We could cite no better evidence of their superiority and popularity than the above statement. Don't experiment by buying unknown and inferior machines.

THE TAYLOR SULKY RAKE.

THIS MONARCH OF BOTH

HAND AND SELF-DUMPING Rakes

Has been much improved, and is the best Rake in the market, working directly upon the axle by means of a simple clutch in the wheel, does away with that breaking and wearing out of small pawls and ratchets, and winding up of grass in cogs and other gear on outside of hub. Anybody who can drive a horse can operate it successfully.

BUY THE "TAYLOR."

HODGES' HAINES' HEADERS

Are the Only GENUINE HAINES' HEADERS.

Hodges' Haines' Headers.

DO NOT FAIL TO SEE THEM BEFORE YOU BUY.

They are the best improved and most practicable Headers in the market. Many important improvements have been added, which must be examined that their great value may be appreciated.

All of our Hodges' Single Gear Headers have Self-Adjustable Reels, Patent Beveled Finger Bars, Extra High Patent Iron Wheels, Center Pitmans, Patent Tongue Irons, Improved Belt Tighteners, Balance Springs on Levers, Loose Gear Spur Wheels, Wood Frame Steering Post, and Grooved Steering Wheels. The above-named improvements can be obtained only on Headers made by A. J. HODGES & CO., and sold only by us. We ask you to compare them with other kinds in the market before purchasing.

PERKINS WIND MILL.

EVERY MILL WARRANTED.

THE GENUINE PERKINS WIND MILL has earned a reputation for excellence that will be maintained. It is unquestionably the most perfect and beautiful Wind Mill in the market.

These Mills are reliable and always give satisfaction. Simple, strong, and durable in all parts. Solid wrought iron crank shaft with double bearings for the crank to work in, all turned and run in adjustable babbitted boxes. These Mills are perfectly noiseless, easy and graceful in all their movements. Positively Self-Regulating, with no coil springs or spring of any kind, no little rods, joints, levers, or balls to get out of order, as such things do. Mills in use six to twelve years in good order now, that have never cost one cent for repairs.

SOLE AGENTS FOR

"SCHUTTLE" FARM & HEADER WAGONS, "GOLD MEDAL" SEPARATORS, RICE STRAW-BURNER ENGINES, Dederick Hay Presses, Etc.

Send for Catalogue with REDUCED PRICES for 1888.

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

THE EMPIRE SENIOR MOWER.

A COMBINATION OF STRENGTH AND DURABILITY.

No Grass grows that it will not cut. The only machine with Enclosed Gear, having only two wheels and two pinions. Perfect Rocking Bar, Adjustable Pitman and Crank Shaft Boxes.

PRICE, \$75.00.

THE MITCHELL WAGON,
MONARCH OF THE ROAD,

Stands to-day at the head and front of all competitors, and is known far and wide as the

Strongest, Most Durable, Best Ironed, Best Finished and Lightest Running Wagon in the world. IRON AXLES, TUBULAR AXLES, STEEL and CAST SKEINS always in stock. Buy the Mitchell and have no other.

If there is no Agent near you for the Mitchell Farm and Spring Wagons and Empire Mowers, write direct to

BURGE & DONAHOO,

General Agents and Dealers in Farm Machinery,
 NO. 9 MAIN ST., SAN FRANCISCO, CAL.

**The BEST & DRIVER
 COMBINED HARVESTER FOR 1888**

HAS PROVED TO BE
 THE LIGHTEST DRAFT,
 EASIEST TO OPERATE,
 THE BEST SEPARATOR
 AND GRAIN CLEANING

Combined Harvester in the field, and there are none that can equal our Header in down and tangled grain. For proof of these assertions please see Testimonials in our Circulars.

Do Not Experiment with Machines that have no Cleaners

If you wish to get the highest market price for your grain, buy the only machine that has a Cleaner. I have the only successful Cleaner in the market for Combined Harvesters, and was Awarded the First Premium and Silver Medal over all other Competitors at the State Fair in 1887.

MY PATENT AUTOMATIC GOVERNOR ON THE FAN
 Completely Governs the Blast on the Shoe.

MY PATENT BRAKE

Gives the driver complete control of the Machine. All others using the Strap Brake are infringing on this Patent.

FOR PRICES, CIRCULARS AND OTHER INFORMATION CALL AT MY WORKS OR ADDRESS

DANIEL BEST,
 San Leandro, Cal.

THE FIELD.

How to Stack Hay for Convenience in Baling.

EDITORS PRESS:—Will you kindly permit me the use of your columns to offer your readers who raise hay for market a few suggestions as to how hay should be stacked so that it may be easily baled.

Briefly, then, I would say: Put it up in long, narrow, high stacks made up of sections each not more than 40 feet long. In no case should the stack be over 20 feet wide—18 or even 16 is better. The stack may be any length (providing it is built in sections as above advised), and the higher the better. The stack should be built across the wind—that is to say, if the prevailing wind is from the west the stack should run north and south.

The reason for this method is obvious. With such a stack the press is set on the east side, out of the wind, opposite the first section. The stack being narrow and the sections short, the hay can be easily and rapidly got across the stack to the press (the wind assisting), none of it requiring to be moved much more than 20 feet. As soon as one section is finished, the press is moved to the next and the process is repeated. It costs no more to put hay into a long, narrow stack of a given height than it does into a short, broad one (40 or 50 feet square perhaps), and the amount of labor saved to the baler is something enormous. I have seen stacks built so broad that it was necessary for the baler to cut them in two parts with a knife, or even use a derrick-fork, all of which is a needless waste of time and labor.

This matter was not so important once as it now is since the operation of presses has become so rapid.

I found this the greatest drawback to fast work with my Junior Monarch and Hurricane presses.

They sometimes demand over 30 tons of hay in a day to keep them going, and if one of them happens to get placed alongside of a stack that is 30 or 40 feet broad there is a constant shout for "more hay," and the machine cannot be worked to its full capacity. When the stack is narrow, however, the table is kept full without undue effort, and the work goes on rapidly.

San Leandro, Cal.

The Linnet and His Pard.

EDITORS PRESS:—In the RURAL of last week I notice some remarks about birds of the finch, or linnet, variety cutting cherry blooms off the trees. I've known of that trick of the linnet for years. He will do it. But I rather think he has a partner in the business in a bird the name of which I know not. This latter bird is much larger than the linnet, has a slim, long bill, and while the linnet male is rather red on the breast, this bird is rather red on the end opposite the breast. He associates with the linnet in business, but not socially, and is about the shape, bulk and build of the catbird of the Middle States; but he does not stop at blossom nipping, as you will see by some cherry leaves (nipped off by him, perhaps assisted by the linnet) which I herewith inclose. These birds seem to work, in Pajaro valley at least, mostly on Gov. Wood cherries. A cheap way to kill both birds is to coat flaxseed, hempseed or canary-seed with a coating of beaten egg and poison—say strychnine—and be sure to put such seed in a shallow box, old milkpan, or such like, up in the tree away from the reach of domestic fowls or other seed-eaters. I find the latter course cheaper than powder, shot and time. But the birds will not be found dead at the cherry trees, or at least I do not find them there.

Watsonville.

J. W. GALLY.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING APRIL 24, 1888.

- 381,521.—SIPHON—G. W. Arper, Oakland, Cal.
 381,671.—PROTECTING FILES—Geo. Brown, S. F.
 381,673.—COUNTER SCALE—J. B. Butenschon, Portland, Ogn.
 381,676.—SWITCH AND FROG FOR RAILWAYS—Cromer & Gavin, Eureka, Nev.
 381,624.—TROUSERS—J. Hetherington, Jr., Hayward, Cal.
 381,695.—RUNNING GEAR—E. Hickman, Red Bluff, Cal.
 381,549.—HEATER FOR MUFFS, ETC.—F. Hiller, Jr., S. F.
 381,629.—ORE-ROASTING FURNACE—J. L. Lovell, Austin, Nev.
 381,638.—BOTTLE-WASHING MACHINE—Henry Palmer, S. F.
 381,723.—COMBINED HEADER AND THRASHER—Reynolds, Paterson & Paterson, Stockton, Cal.
 381,727.—TRUSS—H. C. Stickney, Portland, Ogn.
 381,861.—STUMP EXTRACTOR—G. M. Stroup, Philomath, Ogn.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Spring Fashions.

Misses' Costume.

The admirable manner in which la Mode preserves the youthful appearance so essential in the costuming of Misses is well exemplified in this costume. In this instance a triple combination of fabrics is developed, plain and spotted surah and velvet being the choice. The kilted skirt is laid in deep plaits that all turn in the same direction, and is built upon a four-gored foundation to insure its perfect hanging. The lower edge of the kilt is hemmed, and above the hem a band of the spotted goods is neatly blind-stitched to place, a lining of thin crinoline being added to the band to make it lie perfectly smooth. Upon the front, in lieu of drapery are two scarfs of different lengths. One end of each scarf is plaited and inserted in the corresponding side-back seam near the belt, while the other end is frayed to

justment, and the center-backs fall in a pretty, square position upon the tournure. A close standing collar of velvet is at the neck, and a pointed belt-section of velvet is added just over the shirrings at the front. Coat-shaped sleeves finished with cuff facings of spotted surah are sewed into the arms' eyes.

Though the present choice of materials is exclusively adapted to dressy wear, the fashion is equally desirable for inexpensive fabrics, as is well illustrated by a costume of navy-blue and white twilled flannel. The skirt and body are of the dark goods, and the sash and trimming of white. Blue and cardinal, blue and brown, mode and brown, and green and gray are fashionable combinations and may be developed in any preferred grade of suiting.

THE GOVERNMENT BEATEN.—The trial of W. Humphries and M. J. Donohue, charged with illegally cutting timber in Fresno county, has been decided in favor of defendants. The Government demanded \$15,000 and \$1000 damages. This having been made a test case, several

MISSSES' COSTUME.

form a fringe. The scarfs are knotted tastefully at the left side, and their fringed ends fall low upon the skirt. Upon the back hangs a handsome butterfly-drapery, whose points descend almost to the lower edge. It is draped by gathers at the top and at the center and by plaits at the side edges.

The jauntyness of the basque body is enhanced by the closing, which is made at the back with button-holes and buttons. The front of the basque has a plain under and an ornamental outside portion, the latter uniting the two materials in its construction and being slashed through the center from the top nearly to the bust. Two rows of shirring are made in each shoulder of the outside-front for a short distance below the neck, and a cluster of shirrings, made between the darts that are taken up in both fronts, extends from the waist-line to the lower edge, the latter defining a point at the center. The under-front is exposed in V outline between the slashed edges and is faced with velvet, while the full portion of the outside-front is made of spotted surah. Narrow under-arm and side-back gores, together with the curved closing edges of the back, provide the remainder of the ad-

other similar cases have since been decided against the Government.

A Rare Chance.

The Gabilan Rancho, situated in Monterey county, containing 7665 acres, is offered at \$38.50 an acre, for 30 days, on long time and easy terms. Address, J. C. HOAG, 312 Van Ness avenue, San Francisco.

Wanted—A Competent Nurseryman

To take half an interest in an established nursery business in Southern California. No capital required. Only skill and industry. None but competent nurserymen, well up in ornamental and general nursery work, need apply. Inquire of TRUMBULL & BEEBE, Seedsmen, 421 Sansome St., San Francisco.

Carriages.

We are receiving 10 carloads of Carriages, Buggies and Wagons from the Briggs Carriage Company of Amesbury, Mass., which will be sold at prices that will be satisfactory, considering style and workmanship. Quality of material guaranteed the best.

F. A. BRIGGS & CO.,

220 & 222 Mission St., San Francisco, Cal.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., Room 3.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3.00 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Buena Vista Rancho.

A portion of this Rancho, suitable for mixed farming or dairying, containing 1672 acres, will be offered for 30 days at \$35 an acre, one-third cash, balance in three years. Address J. C. HOAG, 312 Van Ness Avenue, San Francisco, or TYLER BEACH, San Jose.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
 T. A. SLOCUM, M. C., 181 Pearl St., New York.

Awarded Gold Medals at the California State Fair, 1886 and 1887.

\$13,000 IN PRESENTS

PACIFIC MANUFACTURING COMPANY,
934 & 936 Mission St., San Francisco, Cal.
 211-215 J ST., SACRAMENTO. 109 and 111 NORTH FOURTH ST., PORTLAND, OR.

— THE —
"Bonanza" Hollingsworth Sulky Rake
IMPROVED.

For either One or Two Horses,
 Twenty Oil-Tempered Steel Teeth,
 Works on the Roughest Lands,
 No More Broken Teeth.
Wood or Steel Wheels.

Overhanging cleaner in place of the old style sticks. Axles made of steel. Wheels are very strong and tires are bolted to rim of wheel. The very best of lumber is used in the manufacture of these rakes. They are painted and varnished in first class style, and are strictly first-class in every way. WE PUT ON THIS RAKE OUR

PATENT COMBINED POLE and SHAFTS.

Hay Rakes made with these shafts can be used with either one horse or two horses. The cut at left shows it arranged as a pole, or for two horses; the cut at right shows it arranged as shafts, or for one horse. The same parts are used in both cases. The farmer at all times has all the parts with the rake, to make it either a one or two-horse. The change from one to two-horse can be made in a few minutes' time.

Farmers readily see the advantage of this over other rakes, and will buy only those made with Combined Pole and Shafts.

We have had built especially for Pacific trade a 24-tooth "Bonanza" Rake, which will rake two swaths cut by a 4-foot 6-inch or 5 foot Mower.

This is a very popular size and will pay many times over in a season for its small increased price.

THE STOCK YARD.

Shorthorns in Southern California.

The question is often asked: Will Shorthorns do well in California, where they will be required to care for themselves without being fed or sheltered? I answer yes, indeed. They have been put to the test, and the point settled beyond question of doubt that Shorthorns seem to be suited to the climate, and further, that they have a sure tendency to run out other breeds where they have equal advantages. Their vigor and stamina should be better understood than it seems to be after so many years of practical experience breeders have had with them. Baker & Rhodes have a herd of Shorthorns on their ranch near Puente that has passed through the various ordeals incident upon change of season, feed, storms, etc., and they have established the fact that they are hardy and prolific and a perfect success where they are compelled to rustle entirely for themselves. No man who may contemplate establishing a herd of Shorthorns in California need have any fear as to the perfect success of such an enterprise. Charles Thomas, near Strawberry, in the San Jacinto valley, has a herd of Shorthorns which has been on that ranch for several years, and although it snows there some in the winter, and at such times the feed is short, yet this herd has never had a feed of any kind from the hand of man. Yet if any breeder of cattle visits that ranch and sees those cattle he will be filled with astonishment, as well as admiration, at the princely appearance of the herd under the circumstances. I think every good judge of this variety of cattle will at once admit that as a family of Shorthorns they are not surpassed anywhere under the most favorable circumstances for milking qualities. Every cow seems to have a symmetrical and finely-developed udder, giving evidence of extreme uniformity in this respect throughout the entire herd, and yet they retain their individuality in reference to the Shorthorn characteristics of form, color, etc. The only advantage by way of developing milch qualities which this herd has ever had consists in separating their calves from their mothers, except at milking time, when the cows are partly milked and then the calves allowed to finish, and thus an interval of ten or twelve hours for the filling and distending of the udder, which serves to promote the development of the milking qualities. And without this proper interval between milking hours no cow will ever have that perfect formation which she otherwise would in regard to milking apparatus.

I have visited the breeding farms of many prominent breeders and raisers of Shorthorns in New England and the Middle, as well as the Western States, but have never seen as fine a herd of milkers of the Shorthorn family as that of Charles Thomas; and yet Mr. Thomas is not making any effort with his herd, is not selling or offering to sell, or trying to excel others, or to improve, or even in any way to popularize his herd. It is true, in my opinion, that he has in this herd the sure foundation for a certain, easy and princely fortune, and yet he does not seem to be aware of the fact. He has a number of switched tailed running horses, on which he lavishes all his spare change, while the cows take care of themselves and the family and pay the losses of the turf. Any live Yankee who has experience could, with this herd, amass a sure fortune in a short time. I think well of the Jerseys as milch cows, and well of the Holsteins for their many excellencies; but the record of 100 years of pre-eminence of the Shorthorn family over all varieties should settle at once and forever their superiority. It is true that they have in a general way been better cared for than any other cattle; but it was not because they required such exceedingly good care, but because of their value and the return they have always given owners. There is no other breed of cattle on earth that has been of such value to their owners as Shorthorns, and there seems to be but one question of doubt concerning them as a success any and everywhere in the United States; and that question is, can they take care of themselves equally with the hardy natives? I say yes, and evidence is every day accumulating to abundantly prove the fact. The introduction of Polled Angus or any inferior variety of cattle on the ground that they can rustle is an error which must in the near future vanish like fog before the sunlight.

Further, the statistics from State Departments will show conclusively that Shorthorns are not more liable to epidemics or contagious diseases than any other breed, and in regard to pleuro-pneumonia not so much.—*Los Angeles Tribune.*

POTATOES FOR THE EAST.—Chairman Leeds of the Transcontinental Association has notified all lines of a new rate of 85 cents a hundred on potatoes in car lots from San Francisco to the Missouri river and Chicago. This is a 15-cent reduction, the former rate being \$1. Potatoes are being sent East in large quantities, and there is a likelihood of this season's shipments far exceeding those of last year. California new potatoes reach the Chicago market from three to five weeks earlier than those grown in the East, and with this advantage over the local producer, the California potato-grower can command high prices for his product and make a

respectable profit above the cost of freightage. Potato trains will be run soon on quick time. The experiment of running these trains was thoroughly successful last year, and many persons will embark in the business of shipping potatoes who at first deemed the plan inexpedient.—*Chronicle, May 2d.*

QUERIES AND REPLIES.

Painting Wagons.

EDITORS PRESS:—As it is spring of the year and farmers are (or should be) painting their wagons and other articles, would it be asking too much of you to give us directions how to do the work right? Very few farmers know how to do the work as it should be done. I have a spring wagon nearly ready for the paint and would be glad to learn how to put it on and have a decent job when it is done. I find it costs but little more to put in the best of timber and the best of Norway iron and steel for ironing a wagon up right than to put in poor material. Ten dollars thus expended will increase the value of a wagon more than one-half.—R. H. SMALL, *Bitter Water.*

We should like to hear from readers on this subject.

Pigeon-Raising.

EDITORS PRESS:—Please inform a subscriber, by inserting an article in your paper on the subject, what is the best way for making pigeon-raising profitable.—S. MOORE.

Who will give us a letter on this subject?

Killing the Bee Moth.

EDITORS PRESS:—Will some correspondent, familiar with the care of bees, inform me in the columns of the RURAL PRESS how to destroy the moths that infest the hives and ruin the honey and bees; and what time is best to fight them?—MRS. W. D. ASHLEY, *Stockton.*

State Horticultural Society.

The regular April meeting was held on the 27th at the office of the State Board of Horticulture, Vice-President Hatch in the chair.

P. R. Schmidt, A. A. Hibbard, T. W. Cain, and D. B. Wier were unanimously declared elected members of the society.

A reward of \$20 for the best paper on crystallized fruits and \$10 for the second best paper was offered by B. M. Lelong, secretary of the State Board of Horticulture; the paper to contain 1500 words at least, and to give in full the manner of crystallization. Premiums to be awarded at the July meeting of the State Board of Horticulture.

Mr. Lelong also submitted a letter calling attention to the fact that the State Labor Commissioner in an interview in one of the city dailies had said that fruit-growers treated their help like brutes or tramps, and suggested that the commissioner be invited to come before the society with the proof of his assertion. The matter was discussed at some length and the statement pronounced untrue and libelous, but from the fact that it was merely published in a newspaper interview, was thought not worthy the attention of the society. After the discussion it was decided to take up as the subject for the next meeting: "The Labor Supply and Labor Saving Appliances for Fruit Handling."

L. W. Buck on invitation gave some facts concerning the Fruit Union, as to amount of shipments last year, adoption of the auction plan, etc. In reference to freight rates this year he said that it was not likely that rates would be definitely decided upon until the meeting of railway managers in this city, May 15th.

Decision on Threshers' Wages.

The Supreme Court has given a decision in a labor-lien case, sustaining the constitutionality of the bill introduced in the last Legislature by Hon. Allen Henry of Butte. The suit brought was for labor performed by the hands on a threshing machine, the employer refusing to pay for labor performed, and the laborers filed a lien upon the machine to secure their pay. The case originated in Fresno, and the Judge of the Superior Court there rendered a decision in favor of the lien. George W. Garrison and William Falla were the defendants, and to assist them Hawley Bros., a hardware company, appear as intervenors and appellants, claiming the machine as their property, and that they had not employed the laborers to perform any work upon the machine, so that a lien should not hold as against their property.

The Henry bill is quoted in full in the decision by the Court in bank. The concluding remarks of the decision are plain and distinct, sustaining the Act and the lien, as follows:

The language of the Act is sufficiently comprehensive to include a case like this. We could not exclude such a case from its operation without a material modification of its provisions. This case is clearly within the letter of the law, and we see no reason to doubt that it is just as clearly within the spirit of it. The statute gives the lien, and a court of equity undoubtedly has jurisdiction of an action to foreclose it. We think the court properly sustained the demurrer to the complaint of intervention, and that the judgment should be affirmed. Judgment affirmed.

There has hardly been a year that this matter has not been up in Butte and Colusa counties, the reputed owners of threshing-machines fail-

ing to pay their hands, and outside parties stepping in and claiming the machine. At the present time the John L. St. John machinery has been tied up and is now in the hands of a receiver awaiting this decision, and now we think the laborer will get what is coming to him. The bill is a good one for the laborer, and Major Henry knew what was needed for the laborer, and we are pleased to see the constitutionality of the bill sustained by the Supreme Court in bank.—*Chico Enterprise.*

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

THE GIANT POWDER COMPANY.

PATENT OWNERS OF

**NOBEL'S DYNAMITE,
NOBEL'S EXPLOSIVE GELATINE,
NOBEL'S GELATINE-DYNAMITE,**
Best and Strongest Explosives in the World.

As other makers IMITATE our Giant Powder, so do they Judson, by Manufacturing a second-grade, inferior to Judson.

BANDMANN, NIELSEN & CO, General Agents, San Francisco.

JUDSON POWDER,

The Only Reliable and Efficient Powder
For Stump and Bank Blasting. From 5 to 20 pounds blows any Stump, Tree or Root clear out of ground at less cost than grubbing. Railroaders and Farmers use no other.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOBBE.—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.53 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

Dr. J. KOBBE, San Francisco.—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

H. M. NEWHALL & CO., Agents, 309

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully, E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison

For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.

Put up in 1-pound, 5-pound, and 5-gallon Tins.

Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equalled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 2, 1888.

Dry weather, the past week does no little in creating and promoting uneasy feelings even in sections where crops are doing well. In many localities summer-fallowing is going on, on an enlarged scale; large numbers of farms that promised good crops sometime since, are being plowed up for fall seeding. Fruits, as a rule, are not so promising, but garden truck and root vegetables promise large crops. Trading the past week was fairly active in farm products. In Europe and also at the East wheat has strengthened. To-day's cable is as follows:

LIVERPOOL, May 2.—Wheat—Quiet but steady. California spot lots, 6s 7d to 6s 10d; off coast, 34s; just shipped, 34s; nearly due, 34s; cargoes off coast, firm; on passage, quiet but firm; Mark Lane wheat, steady; English and French country markets, generally dearer; wheat and flour in Paris, quiet; wheat on passage to Continent, 35s, 000 qrs; wheat and flour on passage to U. K., 2, 132, 000 qrs.

Foreign Review.

LONDON, April 30.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: Country markets are quiet, but wheat values are against buyers. From sixpence to one shilling advance is quoted in the country, while the recent London advance of sixpence is maintained. Sales of English wheat during the past week were 47,619 qrs, at 30s 9d, against 53,453 qrs, at 32s 8d during the corresponding week last year. Barley is firm. Prices of oats, beans and peas are against buyers. Foreign wheats are firm. Corn is scarce and quoted in London at 26s ex-ship, and at Liverpool at 2d per cwt advance. Linseed on the spot has risen 6d. One wheat cargo arrived. There were five sales. Five cargoes were withdrawn and two remain. At today's market the tone for wheat was less firm. Flour was quiet. Corn remains scarce, and the advance was fully maintained. Barleys were dull, oats, beans and peas quiet, and linseed 6d dearer.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Date.	Cash.	April.	May.	June.	July.
26.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
27.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
28.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
29.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
30.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2
1.....	99 1/2	99 1/2	99 1/2	99 1/2	99 1/2

The closing prices for wheat have been as follows, at Chicago.

Date.	Cash.	April.	May.	June.	July.
26.....	81	81	81	81	81
27.....	80 1/2	80 1/2	80 1/2	80 1/2	80 1/2
28.....	80 1/2	80 1/2	80 1/2	80 1/2	80 1/2
29.....	80 1/2	80 1/2	80 1/2	80 1/2	80 1/2
30.....	80 1/2	80 1/2	80 1/2	80 1/2	80 1/2
1.....	80 1/2	80 1/2	80 1/2	80 1/2	80 1/2

CHICAGO, May 2.—Wheat—81 1/2¢ for cash, 81 1/2¢ for May, 82 1/2¢ for June, 83 1/2¢ for July and 83 1/2¢ for August. Corn—55 1/2¢ @ 55 1/2¢ for June.

NEW YORK, May 2.—Wheat—97 1/2¢ @ 97 1/2¢ for cash, 94 1/2¢ for May, 93 1/2¢ for June, 93 1/2¢ for July, 93 1/2¢ for August and 92 1/2¢ for September.

Visible Supply of Grain.

NEW YORK, April 30.—The visible supply of grain on April 28 was as follows: Wheat, 3,247,000 bu.; corn, 8,530,000 bu.; oats, 3,739,000 bu.; rye, 306,000 bu.; barley, 927,000 bu.

Chicago Fruit Market.

CHICAGO, April 29.—Oranges are in fair request. Choice fruit of desirable sizes sells fairly and prices are steady. At present they are not moving very freely. Dealers say berries interfere with this trade somewhat. There is a good supply of California oranges here. Of foreign fruit the supply is only moderate, and dealers do not care to have much to do with it, as it frequently arrives in rather bad order. Prices rule as follows: California Riverside oranges, Nos. 128 and 226, \$3.25 @ 3.50. California Riverside oranges, other sizes, \$2.75 @ 3; California, other oranges, seedlings, \$2.50 @ 3; California Navel, Riverside, \$4.50 @ 5; California Navel, others, \$3.50 @ 4.25.

Crop Prospects.

MINNEAPOLIS, April 27.—The *Northwestern Miller's* report of the crop condition says: Instead of an improvement there has been a steady decline in the general conditions of the winter wheat crop for the last six weeks. The insects have already appeared in Kansas. Illinois to-day makes the poorest showing for a crop of winter wheat of any State in the belt, and the indications are that the State will prove a failure as far as the yield is concerned, unless the present extreme conditions are mitigated. Indiana and Ohio show no improvement. The prospects in Missouri and Michigan are not flattering. The survey of spring wheat shows that Minnesota and Dakota seeding is about 12 to 14 days late, but the condition of the ground is thought to be an offset for the lateness of the season. Seeding has practically commenced this week. The reports show a decrease of acreage in Iowa and Nebraska.

WASHINGTON, April 29.—The weather and crop bulletin for the past week says: Owing to a general deficiency of rain, the weather of the week has affected growing crops unfavorably. Rain is especially needed in the winter wheat sections and in the northern portions of the Gulf States. Frosts occurred in Kentucky, Eastern Tennessee, North Carolina, South Carolina and the Middle Atlantic States during the week, which probably injured vegetables and fruit. Reports from Kansas, Minnesota and Western Missouri indicate that the weather has been favorable in those sections, and that farm work is well advanced. The weather is reported as favorable for farm work in New England, where plowing and planting are in progress.

Wool.

NEW YORK, April 30.—Wool continues quiet in all markets; the tendency of prices is decidedly in favor of buyers. The general range of selling values

appears to be at least one cent per pound lower than a fortnight ago. Whatever activity prevails at any point is due to the cheapness of the staple rather than to any change in the outlook for goods. Buyers are holding off as far as possible, partly on account of the uncertainties involved in the tariff discussion, partly because there is no pressing need of large supplies, and partly also because the new clip is just at hand. Dealers for the moment, moreover, are now inclined to bull the market, having in mind the desirability of buying the spring clip in this country at the lowest possible rates. Texas advices continue to report that the condition of new wool is excellent. Some irregularity has characterized the business at London, but the attendance at sales continues large and competition is generally active. Prices are held firm.

The Boston market is dull, with sales of 2,378,000 lbs. for the week of foreign and domestic, including 237,000 lbs. California. The best price of the latter was 26c.

Philadelphia reports a light trade, with sales of 466,000 lbs., with prices somewhat at buyers' dictation.

Miscellaneous.

NEW YORK, May 1.—Foreign and Pacific raisins are higher. California two crown are quoted at \$1.50 @ 1.55; three crown, \$1.90 @ 2.05; London layers, \$2.40 @ 2.50. There are but few of the latter here.

Unpeeled evaporated peaches have sold freely at 14c.

The trade in hops is very flat, though there is no anxiety shown on the part of holders to sell. Choice State are quotable at 13c; best Pacific, 12c.

Local Markets.

BAGS—The market is dull and heavy, owing to poor crop prospects. The market is quotable nominally at 7 1/2 @ 7 3/4 c.

BARLEY—The sample market has moved up quite rapidly the past week. Options on Call advanced since last Wednesday about 15c per cental, sending several bears to the wall, besides causing others to lose heavily. To-day's sales on Call are as follows:

Morning Session: Buyer season—200 tons, \$1.02 1/2; 100, \$1.02; 100, \$1.01 1/2; 500, \$1.00 1/2; 200, \$1.01. Buyer 1888—100 tons, \$1.19; 100, \$1.19 1/2; 100, \$1.19 1/2; 800, \$1.19; 100, \$1.18; 100, \$1.17 1/2; 1700, \$1.17; 500, \$1.17 1/2; 100, \$1.17 1/2; 300, \$1.16 1/2; 300, \$1.16 1/2. Seller 1888, new—100 tons, \$1.06. Afternoon Session: Buyer season—500 tons, 99 1/2; 200, 99c; 200, 97 1/2 c. Seller 1888—100 tons, 98c. Seller 1888, new—300 tons, \$1.02. Buyer 1888—400 tons, \$1.15; 100, \$1.17; 100, \$1.16; 400, \$1.15 1/2; 100, \$1.14 1/2; 100, \$1.15 1/2 cwt.

BUTTER—The market holds very strong under a good demand to fill orders and also for packing. There is a strong competitive buying. The consumptive demand is good, but prices are too low yet for the East to ship freely to us.

CHEESE—The market is weak at quotations. The demand is only fair. Stocks are large while receipts are free. Dealers appear to think that the bottom has been reached.

EGGS—The market continues weak and irregular, although Eastern are not being forced on the market so freely. Stocks here are large, and as the weather is warm, free selling is a necessity.

FLOUR—The market has been advanced to 15c per bbl. A still higher range is looked for, unless wheat goes down, which is quite unlikely.

WHEAT—The market is strong at higher prices—particulars given in another column. On Call, futures advanced since last Wednesday about 15c per cental under strong buying and active trading. To-day's sales are as follows:

Morning Session: Buyer season—100 tons, \$1.46; 100, \$1.46 1/2; 700, \$1.46; 100, \$1.45 1/2. Buyer 1888—100 tons, \$1.62 1/2; 200, \$1.63; 200, \$1.62 1/2; 200, \$1.61 1/2; 300, \$1.61 1/2. Afternoon Session: Buyer season—100 tons, \$1.44. Buyer 1888—100 tons, \$1.59 1/2; 2000, \$1.59 1/2; 300, \$1.59 1/2; 100, \$1.59 1/2; 800, \$1.59; 200, \$1.58 1/2; 200, \$1.58 1/2; 700, \$1.58 1/2; 100, \$1.58 1/2; 100, \$1.58 1/2; 200, \$1.58 1/2 cwt.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to April 30, '87.	July 1, '87 to April 28, '88.
Flour, qr. sks.....	3,775,151	3,139,895
Wheat, cts.....	11,506,060	7,812,445
Barley, cts.....	2,049,831	2,014,854
Oats, cts.....	125,120	146,915
Potatoes, sks.....	729,871	988,876
Corn, sks.....	90,109	207,061
Rye, sks.....	22,163	16,053
Buckwheat, sks.....	5,865	3,054
Beans, sks.....	413,878	379,919
Bran, sks.....	394,694	435,169
Hay, tons.....	89,646	101,898
Salt, tons.....	20,248	14,110
Wool, bls.....	59,300	55,277
Hides, No.....	93,478	91,409
Raisins, 20-lb boxes.....	137,252	110,995
Quicksilver, flasks.....	15,451	26,129
Hops, bls.....	12,999	15,445

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to April 30, '87.	July 1, '87 to April 28, '88.
Flour, sks.....	164,583	308,128
Wheat, cts.....	781,682	1,030,429
Barley, cts.....	5,473	75
Oats, cts.....	311,711	246,150
Corn, cts.....	117,249	12,590

Bran, sks.....	27,918	55,263
Hops, bales.....	764	508
Hides, No.....	29,142	24,500
Rye, cts.....	5,289	5,289
Potatoes, sks.....	133,840	80,100

Cereals.

The *Mark Lane Gazette* reports as follows, on wheat: Winter still drags its slow length along.

The week just passed has been characterized by strong, cold north-easterly winds, with daily snowstorms and regular night frosts. So late as April 8, blinding snowstorms occurred in the southern counties, and the weather remains unsettled, with no outward and visible sign of improvement. The intervals of sunshine have assisted the drying effects of the winds, and consequently seeding operations have made considerable progress, the land working admirably in all but the colder districts at high altitudes. The clays in the eastern and south-eastern counties crumble to pieces like ashes when the tackle is put upon them, and the snowstorms merely damp the surface—no disadvantage in many cases, for the drying has been very rapid. The autumn-sown crops are not growing at all, and we take it that herein lies their safety in such a remarkable season. At the same time there has been a very fair start made with seeding operations. Beyond this there is nothing to say, excepting that farmers look as blue as their winter tears to see snow and frost so late in April, with so much work yet undone.

The same journal reports as follows, on barley: With regard to the probable acreage of the 1888 barley crop, it is too early to form an opinion. The season is very late, but the land is in splendid order as a rule, and a great deal of work will be done in a very short space of time if the weather will permit, and it is not improbable that a portion of the unsown area intended for other crops may—if temptation is afforded by favorable seed-beds—be sown with barley; on the other hand, if unfavorable weather should characterize the remainder of this month, the barley crop of 1888 may prove a disastrous failure. All that can be said now, in this connection, is that the position is becoming a very critical one, and that every day of prolonged winter thus late in the season is materially reducing the chances in its favor.

The Ohio wheat crop report, according to the State Board of Agriculture, is as follows: Acreage, compared with full average, is 90 per cent; condition of plant, compared with full average, 68 per cent; barley, compared with full average acreage, 77 per cent—condition, 71 per cent; rye, compared with full average, 86 per cent—condition, 82 per cent. The area of wheat shows a decline of 1 per cent compared with the last November report. In some fields, where wheat has been greatly injured, oats have been sown. It is too early to determine the full extent of the injury to the wheat plant.

The April report of the Missouri Department of Agriculture makes the condition of wheat April 1, 1888, 82 1/2 per cent. The quantity of wheat remaining in the State of 1887 crop on April 1, 1888, 16 per cent of the 27,744,000 bu. grown in 1887, or 4,439,040 bu. The wheat area for the crop of 1887 was, in the State of Missouri, 1,712,603 acres, and is, in 1888, 913,100 per cent of it, or 1,558,983 acres. The area of corn in Missouri, for the crop of 1887, was 6,406,785 acres, producing 140,949,000 bu. of corn. The quantity of the 1887 corn crop in that State was, on April 1, 1888, 20.9 to 10 per cent, or 39,458,341 bu. The Washington report makes the quantity of corn left in the State April 1, 1888, 39,405,720 bu.

Oregon advices report the wheat crop doing fairly well in that State and Washington. The outlook will hardly be an average. Last year the crop was above an average. The advance in the English markets, and higher prices in California, caused holders to ask more money, and consequently trading is restricted.

In this State, the writer's advices continue discouraging. The hot winds of about a fortnight ago did a great deal of damage, and continued dry weather has parched up many localities. In many places farmers are cutting their grain for hay. In the coast counties the crop is doing fairly well; even in these, rains would do great good. It now looks as if the wheat crop, notwithstanding the increased acreage, will be fully 10 per cent less than last year, while barley will be all of 40 per cent less, owing to decreased acreage, cutting for hay and an entire failure of the crop in many localities and a poor outlook in others.

In the local market wheat has been excited throughout the week, under stronger buying and firmer holding. Many contract sales were made against which the grain has been bought or else sent to tidewater in case of a demand by the buyer. There is no doubt but that there is quite a line of short sales out, to fill which the sellers will have to bid well up. Many have already filled at a heavy loss. Quite a number of interior operators bought long and have made money. Shippers are buying wheat in only a small way to meet actual requirements, as the high prices asked are against their engaging in new business. Millers were not stocked up and consequently have to pay well to have their wants met.

Barley has ruled strong and high throughout the week. There was a steady advance up to Saturday, when a failure on Call was announced that caused heavy selling that day and Monday morning; but the party after the banks opened on Monday paid dollar for dollar and resumed business, when the bulls commenced to buy heavily, sending prices up several cents by Tuesday morning. Many bears filled at the high prices, but the big ones put out more. The consumptive demand was quite good throughout the week. Brewers entered the market but withdrew again owing to the high prices. It now looks as if brewing grades will be scarcer than ever.

Oats, in sympathy with barley, are held higher. Trading is more free. Receipts are only fair, while stocks have been reduced.

Corn is stiffer and fairly active. The better grades continue scarce and high.

Rye holds strong at full prices, under firm holding and only moderate supplies.

Fruits.

Seasonable fruits make a better showing, with cherries working down to lower prices. The canners clean up the market on strawberries when prices get down to about \$4 per chest.

For future delivery, the writer hears of sales made on the ground at 2 1/2¢ to 3 1/2¢ for apricots; Silver prunes, 2 1/2¢. Peaches and French prunes are held higher than a week ago, but actual sales are hard to get. Orchardists will confer a great favor by writing to the writer particulars about sales and also crop prospects. No name will be used when there are objections. It is only by mutual information that growers can act knowingly. Address J. R. Farish, P. O. box 2325, S. F. It is best to keep the address for future reference, for patrons of this paper may desire information on the different markets,

which the writer will cheerfully answer by letter or telegraph, as desired.

Fruit prospects are not quite so good. The hot winds of about two weeks ago did much more damage in many localities than heretofore claimed. This is shown by the almost bare condition of the trees on the north side, in a large number of orchards. The apricot crop will be considerably short of last year, owing to the almost total failure of the Moorpark. Last year the Moorpark apricot crop aggregated for the State about 20,000 tons, but this year it will not go over 6000 tons. The Royals and Blenheims are a large crop. Mr. Wakefield at Los Gatos has the latter variety, and he tells the writer that his trees are bearing well. The plum crop will be large, as will the Hungarian prune, but the French prune, Silver prune and cherries will be short. Other fruits it is too early to speak intelligently on.

In dried fruits, the stock is light, as is the demand. It now looks as if all holdings will be cleaned up before the new crop.

In raisins, the supply is light. The market is in strong position and higher prices looked for. The grape crop prospects are encouraging.

Feedstuff.

Bran, middlings and ground barley are strong and higher. The demand is increasing. The advance in wheat will probably lessen the output of bran and middlings. Feed corn is strong, with a disposition to advance prices.

Hay is well under way in many localities. Farmers in many places have been forced to cut their grain for hay. From all information at hand the crop this year falls considerably below that of 1887, while the stock of old is very little. The consumption this year will be larger than that of last season. The market is very strong, with an advance obtainable for good to choice.

Live-Stock.

Owing to liberal supplies at lower prices of fruits and vegetables the demand for meats is light, and as there is a free offering of both bullocks and mutton sheep the market is easy, with some shading in prices reported. Lambs and calves are steady. Hogs are wanted, with those suitable for the block selling as high as 6 1/2¢. Milch cows are in fair demand, but the dearth of feed is against their fetching high prices. In horses, former reports are still applicable, except for work horses, which are slow, particularly for the medium size.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grain-fed, 6 1/2 @ 6 3/4 ¢ lb.; dressed, 9 1/2 @ 10 ¢ lb.; soft, 6 @ 6 1/2 ¢ lb.; dressed, 8 1/2 @ 9 1/2 ¢ lb. Stock hogs, 3 1/2 @ 5 ¢ lb.

BEEF—Stall-fed, 8 @ 8 1/2 ¢ lb.; grass-fed, extra, 7 1/2 @ 8 ¢ lb.; first quality, 7 @ 7 1/2 ¢ lb.; second quality, 6 1/2 @ 7 ¢ lb.; third quality, 5 @ 6 ¢ lb.

VEAL—Choice, 9 @ 11 ¢ lb.; fair to good, 7 @ 8 ¢ lb.

MUTTON—Wethers, 6 1/2 @ 7 ¢ lb.; ewes, 6 @ 6 1/2 ¢ lb.; lamb-spring, 9 @ 10 ¢ lb.

Vegetables.

Garden truck is coming in more freely, causing lower prices and greater variety to draw from.

Asparagus continues to be taken by canners, when prices recede under heavy receipts.

Peas fluctuated some the past week. Canners only buy when there is a glut. There are three canneries running on them.

Cabbages are lower, under freer receipts of new and a falling off in the call for old for shipping.

Quotations for old potatoes are withdrawn, prices being too irregular and unsatisfactory. New are in liberal receipt. The larger and more matured find ready buyers and full figures, but small and unripe are slow. Shipping to the East is continued.

Onions are strong at full figures, under light receipts and a fair demand. Crop prospects continue good.

Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	400,305	224,792
In port, disengaged.....	53,960	122,835
In port, engaged.....	12,271	3,862

Totals..... 466,536 351,489

To obtain the carrying capacity, add 60 per cent to the tonnage.

Tonnage on the way to Oregon, 15,077; tonnage at Portland, Oregon, loading and to load, 19,114. Total tonnage, 34,191.

In poultry, geese and ducks are lower, but turkeys, roosters and hens are higher. The demand is free.

In wool there is nothing new to report; the general feeling is that the bottom has been reached and any change will be for the better.

In hops there is a continued good call for choice straight parcels, but of which the market appears to be bare.

Beans are steady at full prices.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

EXPLANATION.—1. for clear; Cy, cloudy; Fr, fair; Fy, foggy; — indicates small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

COWBOYS AT DISTRICT FAIRS.—The Nevada State Fair directors have had a hint which the Inyo Independent thinks might well be acted upon by the directors of district fairs in California. It is proposed to have vaqueros show, by practical examples, how range cattle are rounded up and range horses are ridden. It would be done by cutting out one animal at a time, and the instant it left the band, the horseman on deck would take after it. The time it took him to lasso it, throw it down and tie it, would be the score for others to beat, as they in turn have a trial. The "bronco bursting," as the boys call it, could be done on the speed-ring, although the other trials would need the large ground in the center. A few wild horses could be provided, and there are dozens of boys in this State ready, on the shortest notice, to ride anything that has four legs. There would be no way to try the degrees of skill, perhaps, so it would have to be arranged to pay so much apiece. The horses would be blinded, saddled and bridled as part of the exhibition, and it would be exciting enough for any one. The cattle and horse ranges of the West are distinctively American institutions, original and inimitable. The crack riders of other countries would be as much at sea on a bucking bronco as a sailor would be in a balloon, and not one person in a hundred has ever seen any range riding.

PENNSYLVANIA PETROLEUM.—It is a singular fact that Pennsylvania petroleum, which was the first in the world to be developed, is superior to any that has since been found on any part of the globe. Compared with the oils produced in Northwestern Ohio, Canada, Russia or California, the Pennsylvania is far superior.

To Every Pump Maker,
Owner! Runner! Agent!

If there is ANY PRACTICAL QUESTION concerning ANY APPLICATION or ANY ADJUSTMENT of ANY KIND of a PUMP which is not answered in Mr. ROBERT GRIMSHAW'S PUMP CATECHISM, we would like to have it for answer in the next edition or volume.

The Author will answer any such question in our columns, if addressed in our care, by a regular mail subscriber to our paper. "Catch" questions invited, if they have a practical bearing.

*Tells, for instance, how to put entirely together, set up, adjust, and run all the leading pumps in the market. This information can be had in no other shape or place. Price of the book, post-paid, only \$1, and worth \$5.

HAY PRESSES!

THE HURRICANE—Size A.

A mounted, horizontal double-ender. Size of bale,
when in the press, 17x22x40 inches. Average weight of
bale, 220 pounds. Capacity, from 16 to 25 tons per day.
Uses 4 men and works with 2 horses. Requires no
tramping. Puts 10 tons or over in a box car.

Price.....\$1000.

THE HURRICANE—Size B.

Size of bale in press, 22x24x46 inches. Average
weight of bale, 260 pounds. Capacity, from 20 to 35
tons per day. Uses 6 men and works with 1 or 2 horses,
at option of baler. Requires no tramping. Uses rope
or wire. Puts from 7 to 8 tons in a box car.

Price.....\$1000.

MONARCH CAR PRESS
10 TONS BOX CAR \$600
MONARCH JR. ORDINARY BALE \$500
THE
MONARCH
IS THE BEST SMALL
BALE CAR PRESS IN THE
WORLD.

The SELF-TRAMPING JUNIOR MONARCH

Size of bale in press, 22x24x46 inches. Average
weight of bale, 260 pounds. Capacity, from 15 to 25
tons per day. Uses 3 or 4 men, at option of baler.
Works with 1 or 2 horses. Uses rope or wire. Does its
own tramping. Puts from 7 to 8 tons in a box car.

Price.....\$500.

THE MONARCH.

Same principle as Junior Monarch, only smaller and
heavier. Size of bale, when in press, 17x20x40 inches.
Average weight of bale, 220 pounds. Capacity, from 12
to 20 tons per day. Requires 3 men and 2 horses. Uses
wire only—rope will not hold. Does its own tramping.
Puts 10 tons or over in a box car.

Price.....\$600

THE GENUINE PRICE PETALUMA.

Size of bale in press, 24x24x50 inches. Average
weight of bale, 250 pounds. Capacity, from 10 to 15
tons per day. Requires 4 men and 2 horses. Uses rope
or wire. Hay must be tramped into the press. Puts
from 5 to 6½ tons in a box car.

Price.....\$350.

THE IMPROVED EAGLE.

Size of bale in press, 26x26x50 inches. Average
weight of bale, 235 pounds. Capacity, from 10 to 15
tons per day. Requires 4 men and 2 horses. Uses rope
or wire. Hay must be tramped in the press. Puts from
4½ to 5½ tons in a box car.

Price.....\$250.

The above is the finest line of Baling Presses in the
United States. They are nearly double the capacity of

FOR STACKING HEADED GRAIN.

"ACME" STACKER ON RUNNERS, \$100.

Stacks 20 to 25 feet high.

Improved Rakes and Bucks.....	\$50 00
-------------------------------	---------

I have adopted the "ECLIPSE" as my standard Stacker and Loader. I mount it on wheels, which are not shown in the picture. It builds stack 30 feet high, and the load may be "tripped" at any point, after the horse is started, varying with height of stack, or of load on wagon. This feature is peculiar to the "ECLIPSE," and of great importance, enabling the farmer to stack hay in the windiest weather, as it does not carry all the hay up over itself, regardless of height of stack, but dumps it just where wanted, and the hay, while being elevated, is held so that the wind cannot scatter it.

It is light, yet strong enough to lift the heaviest rake load; easily and quickly moved; requires but one stake.

Weight, 1500 pounds. Price, \$100.

The Ramie Plant.

There is so much talk about the ramie plant and the possibility of profit from its growth and the preparation of its fiber, that we give herewith an engraving showing a portion of the stem of the plant with leaves and blossoms. There are several species of the plant, which are claimed to have more or less value as a source of fiber, but the engraving, which is of the *Boehmeria utilis*, sufficiently illustrates the plant. We are indebted to the *South Illustrated* of New Orleans for the engraving of the plant, and the editor of that journal gives the following notes descriptive of the species:

Ramie is indigenous to Java, though it has been long confounded with China grass. It is now recognized, however, that the two are essentially distinct. China grass comes from the *Boehmeria nivea*, while ramie is furnished by the *Boehmeria utilis*. Both plants are of the nettle order, and of considerable size, especially when they are improved by culture, but their leaves differ in color. Those of the *Boehmeria nivea* have a silver-white top, while the *Boehmeria utilis* has leaves grayish-green on both sides. The fiber obtained from each plant is very similar in many respects, but that from the former always retains a certain harshness, as well as a greenish tint; ramie, the fiber obtained from the latter, is very soft and beautifully white, and does not break so easily when subjected to tension.

A large quantity of plants believed to be of the superior species were grown by Trumbull at San Rafael last year and were quite widely distributed over the State. The University has for several years been growing a plat of *nivea* or *candidissima* in the economic garden at Berkeley, and has furnished large quantities of stems to inventors of extraction machines and processes, and has distributed seeds and plants to those who desired to experiment with them. We have given notes from time to time in the *RURAL* of efforts at the preparation of the fiber. Good fiber has been produced, and a company was organized here to prosecute the ramie industry. We have not heard much of the progress of the enterprise of late. No doubt as soon as some individual or company is ready to contract for the fiber at a certain price per ton as it comes from the field, there will be a disposition to grow it, and there is practically no limit to the amount which can be grown here if the effort can be shown to be profitable.

At the East and South, ramie comes up periodically as some new machine comes forward with a claim to success in preparation of the fiber. We have during the last few years mentioned several of these machines. The one which is now being brought forward is called the "Kaufman Decorticating Machine," which is said to work "continuously, without reversing the fiber, delivering the same clean, straight and untangled, without waste or the use of water. It decorticates either green or dry stalks, without being retarded by gum, and can

be easily operated by two boys or girls. The capacity of the machine is one ton of stalks per hour, yielding 100 pounds of dry fiber." We do not know anything more of this machine than we read in New Orleans papers, and allude to it merely as an item of interest to those

to the scores which have gone before. It seems beyond doubt that from the many trials there will come forth a practicable and profitable process. It cannot come too soon.

APRICOTS.—According to telegrams received,

THE RAMIE PLANT IN LEAF AND BLOOM.

who are considering the possibility of a great fiber industry for California.

Another institution which is operating in the South and it about to establish one of its machines at Tallahassee, Florida, is the "International Fiber Co. of New York," which claims that its decorticating machine and "de-gumming" process will be to ramie culture what the cotton gin has been to cotton-growing, has one of its machines on exhibition at the Sub-Tropical Exposition. It is said to decorticate from 1000 to 1500 pounds per day. This company offers to furnish these machines at a low figure and to purchase the product at \$80 per ton, to be afterward de-gummed by a process of their own. Such are two new things in ramie to add

the first apricots left the Briggs orchard, Marysville, for San Francisco on May 4th, and on the same day apricots appeared in Phoenix, Arizona, from the adjoining valley orchards.

VERY encouraging reports are received from all sections of Western, Southern and Eastern Oregon and Eastern Washington Territory regarding the crops. The recent rains have been of incalculable benefit to grass, grain, berry and fruit crops.

FRUIT SOLD.—It is telegraphed from Newcastle that the peach, plum, prune, grape and other fruit crops will be heavy, and the entire crop of the Newcastle fruit district is already engaged by actual purchasers.

Poultry Products.

Eggs and market fowls are sympathizing to some extent at least with the appreciation in value of other fresh-food supplies, which is believed to be owing to the increased consuming population of the State. It seems likely that the local production of all these food materials will increase, as is usual whenever an elevation in the range of market values occurs. In poultry products we are always living under the stimulus of high values as compared with those prevailing in other parts of the country, so that this spring's experience is in the same line, but in a more remarkable degree. The gathering up of fowls for shipment to Southern California to meet the demand to feed tourists with a good appetite for "yellow legs," is said to have so reduced supplies for the San Francisco market that chicken buyers are complaining at the prices they have to pay. The conclusion to draw from these facts is that more attention should be paid to fowls. It has been shown that there are serious objections to large scale operations with poultry in this State, and that success is not so easy with incubation and rearing of large numbers in California as it is in France. If this be true, and if large ventures which figure out so well on paper do not make anticipated returns in practice, the lesson should be that we should have more small flocks which are conceded to be very profitable if well handled.

This suggestion should have force with the many who are starting in on small fruit farms or who are clearing up Government lands and making homes thereon. A flock of fowls with plenty of range, plenty of water and proper food, which is easily produced on the place, give a steady income, which is of much aid to one who is waiting for his trees and vines to come into bearing. We can very well get along without the great breeding and feeding establishments if small producers will each do something to meet the market demand.

It does not cost very much to begin, though a little effort and outlay to get good stock will be a good investment. It is getting too late to start in now with setting hens and well-bred eggs, for summer-born birds do not usually turn out well. One can often see a chance to buy a few dozen young broilers which can be used to advantage and which will begin

laying this fall and hatching during the winter. Then, if the stock does not suit, better eggs can be bought and the new flock brought forward.

It takes some watchfulness and trouble to bring along even a small flock of hens, but there is no investment which can be made which will pay so well, considering the small outlay required. We ought to stop the great importation of eggs to this State from the great Western States. We ought to be able to supply the demand and reap the benefit of the excellent prices which prevail in our markets.

RASPBERRIES were shipped to San Francisco from the farm of Luis Ames, Newcastle, Placer county, on May 5th.

HORTICULTURE.

Santa Clara Fruit-Growers and the Tariff.

For several weeks past, says the San Jose Mercury, the fruit-growers in the Willows, desiring to form an association of some form or other, have been meeting at the houses of various orchardists in that section and discussing plans for accomplishing it. Saturday, April 20th, another meeting was held in the drier of Mrs. S. T. Ingalls, attended by a large representation of the orchardists of the neighborhood, and the Hon. C. N. Felton was present. A. S. McWilliams presided and W. N. Plummer acted as secretary.

Congressman Felton, as being direct from the capitol at Washington, and familiar with the legislation which is at present attracting so much interest there and which is of so vital importance to Santa Clara valley, was called on for remarks concerning the situation. Prefacing what he had to say by the statement that although an old Californian, and therefore, acquainted with its industries as well as somewhat personally interested in them, he would, nevertheless, be greatly pleased to receive any suggestions from those present respecting these questions. The present legislation, which is before Congress, inspired by the annual message of President Cleveland and by a bill passed by a majority of the Ways and Means Committee, which has attacked the industries of this coast, eight or nine in number, by putting their products on the free list, will interest you. What will be the result of that style of legislation, whether it will pass the two Houses of Congress and be made tentative on the people, thereby inflicting incalculable damage on the people of this coast, we cannot tell at present. I hardly think that it will meet the approval of the Lower House. The next two or three weeks will see a general debate on Mr. Mills' bill; then in Committee of the Whole each item in the bill will be considered and passed upon; then will come further discussion, after which we may be able to form some correct estimate as to what will be the outcome of the present legislation in this Congress. Should it be passed, the result will be disastrous to Santa Clara county, and in particular to the prune industry, which, I am told, will assume colossal proportions in your county this season, the output being estimated at twenty to twenty-five million pounds, whereas last year it was only a million and a half to three-quarters pounds. In the State last year the production of prunes was about 2,500,000 pounds, while this year it will be 30,000,000 to 35,000,000 pounds. Further, your dried and glazed fruits are also threatened. I am told that Mr. Barbour, who last year conducted a large business in this latter branch of trade, will this year suspend business, owing to the prospective passage of the Mills bill. The duty on glazed fruits, the manufacture of which in this country is in its infancy, is 25 cents. Mills would put them on the free list and allow these delicious confections to be exported from France, where the industry has been placed on so firm a basis that the production is attended with not near the expense or outlay. Now, we hope that the Mills bill will not pass, because of its manifold danger to our industries, which must be indeed great, if simply the prospect of its passage compels the suspension of a laudable business. Further, when we realize the fact of the possibilities of your production of a million gallons of wine per year; the almond and walnut flourish abundantly, both of which are put on the free list; not to speak of the olive, the development of which is only begun in your valley, in no part of which it cannot be grown to perfection and where the field of cultivation is practically without a limit, yet which is one of the articles put on the free list in this bill. You will now see the injurious effect which the passage of this bill will have on the horticultural interests of Santa Clara county. However, by saying that they have attacked the general interests of this State, I do not mean to be disrespectful, but so general are our interests that I do not think they properly understand them. Moreover, in a new State even the general legislation affects the interests more than in other and older States, where the manufacturing and other industries have been in longer operation and put on a firmer basis. A man in the East should encourage his fellow in California as a producer, for the reason that the more production of this kind, which is not brought into competition with their manufactures, is that the greater the prosperity here, the greater call there is for Eastern goods which cannot be produced in this State. The limit of our demand, as we are not a manufacturing country, is gauged by our ability to purchase, and vice versa.

The fruit industries of this coast are only developing. We have spent time and millions of dollars in learning the business; and just as we are on the eve of reaping the benefit of years of time, we are being attacked by the very persons who should aid us. In some cases the limit has not even been attained. We are only now finding out the capabilities of the soil, and a few years ago we did not know what its possibilities of cultivation were. We are all pronounced on the maintenance of our infant industries, so called in one sense, properly.

Mr. Felton closed his interesting remarks by stating that he was always glad to receive any suggestions from any person or association, and that when properly drawn and pertinent, they might be of assistance to him at Washington.

Chairman McWilliams referred to the fact that the fruit-growers had been grafting and regrafting their trees, and had seen the business develop from its infancy in 30 years, but now it appeared that as soon as they were about to get on the right track, injustice was being done them. He contended that the fruit crop was the poor man's crop; the wives and daughters could participate in the canning, thus aiding in saving expenses. He mentioned the fact that there were three ladies present who represented 80 acres of self-sustaining orchard, who managed the farms themselves and were successful.

John Britton stated that oranges, lemons, prunes, etc., could be shipped from the Mediterranean into New York for between three-quarters to three-eighths cents per pound, whereas the grower here had to pay about 1½ to 1¢. Should the tariff be taken off, the foreign grower would have that advantage over the Californian. The fruit-growers of this county, however, would prefer to see all the industries of the country protected. A division of strength would be disastrous to the country. They would prefer to see the wool, iron and manufactured articles all encouraged. They would stand shoulder to shoulder with all. Protection to American labor and protection to American capital are both needed. Break down one and you injure all. We favor a protection all along the line.

Henry Sears said that the question of taking the tariff off prunes was a serious matter and one which should interest all on the coast. Undoubtedly a blow struck at this industry would be detrimental to all.

E. T. Pettit was pleased to hear that the representatives on this coast were interesting themselves in the matter, and were going to stand by us in the matter of legislation.

William Gardner said he thought we ought to be at least reasonably protected as regards the difference in freights between this country and France. As it stands now the growers in France can ship their fruit here by water at a less cost than we can by freight. I should think that none of the Congressional representatives would object to at least giving us this concession, which would place us on an equality with them, thus preserving our home market. In 60,000,000 of people we could probably get along on that condition, and perhaps sometime extend it abroad. A little protection would make a better market than otherwise.

Organization.

In the absence of W. H. Baugh and Thos. Osborn, members of a committee on constitution, of which O. F. Alley was the other member, G. W. Worthen and Charles Kipp were appointed on the committee. They retired and after consultation reported as follows: Believing that organized effort is better than individual exertion, and that co-operation will be a mutual benefit to the small prune-grower as well as the large, and that by uniting our interests we will be enabled to find a better market and sale for our products. Therefore, for the better carrying out of our ideas and the facilitating of business, we adopt the following constitution and by-laws.

The constitution and by-laws provides that the society shall be known as the Santa Clara Valley Fruit League, that its officers shall be Chairman, Secretary, Treasurer and an Advisory Committee of five members to be elected annually; that meetings shall be held at least once a month; the members shall be all fruit-growers who wish to affiliate with the society and subscribe to the conditions; that the Advisory Committee shall inform themselves from time to time upon the state of the market in regard to supply, demand and ruling prices and such other and further information of benefit to the League; that a general debate on subjects pertaining to and for the good of the League shall be part of the order of business each regular meeting.

Apple Culture.

EDITORS PRESS:—I have just been reading with much satisfaction the essay delivered by O. N. Cadwell, before the Santa Barbara Convention, on "Apple Culture." His views on planting and pruning are especially worthy of notice. Were I to set out an orchard with a view of having it hardy and lasting, I would either plant seeds where I wanted the trees to grow or set out seedlings and graft with choice fruit from healthy-bearing trees. The best orchard I ever saw in Michigan was one where the owner planted the seeds right where the trees were to stand, and when they began to bear, he had all, except some choice varieties grafted, and there was not a sign of a diseased tree in his 20 acre orchard, notwithstanding the trees had been standing over 40 years.

Right here let me say, in reference to natural fruit; some of the finest flavored apples I ever ate were from natural trees, and they were invariably hardy and great bearers. It is a well-known fact that natural fruit makes much better cider than grafted fruit. Sixty years ago my father set out 100 natural trees on one acre in Michigan. After the trees began to bear they were all grafted except a few which bore choice fruit. These were superior in quality and in productiveness to any that were grafted, and to-day are healthy and bear every year large crops, while most of the grafted ones are dead in the top. Standing in front of the old

house where I lived for nearly half a century is a pear tree, which grew from a graft inserted in a thorn root over 40 years ago. This tree is hardy, healthy and bears annual crops of 30 or 40 bushels of pears, while most of the pear trees in the vicinity are dead or nearly so from the blight.

Mr. Cadwell's ideas about pruning, starting the top low down; cutting back the rampant limbs so as to keep the fruit close to the ground, causing the limbs to grow stalky and thus do away with the necessity of propping up the limbs, is sound. I would further recommend that the inside limbs be cut out so as to form a top goblet shape, and I would keep the tree low so as to have the fruit easy of access and away from the birds and the scalding sun. Many trees are ruined by forcing the top to ascend to the high branches where it becomes scalded and unfit to nourish either fruit or limb. J. S. TIBBITS.

Santa Rita.

THE FRUIT UNION.—President P. E. Platt, in an interview in the Record-Union, said: The Union is on a sound basis, and hopes this year to do a very largely increased amount of shipping over any previous year. Agents are now being appointed in all important markets throughout the East. The auction plan has been adopted for the disposal of the fruit in Boston, New York, Philadelphia, Chicago, and may likely be chosen as the proper course in other cities. The Eastern manager will go East in a short time to personally superintend the work of the agents and aid in proper distribution. It is expected that many new markets will be opened. Nothing new can yet be stated with regard to freight rates, but it is hoped that liberal and reasonable concessions will be made by the transportation companies, and that the time required to reach the Atlantic seaboard may be shortened considerably. This latter is a very important matter, and all possible pressure is being brought to bear to bring it about.

THE FIELD.

The First Attempt at Beet-Sugar Making in California.

In his "California Pastoral" Hubert Howe Bancroft gives an amusing account of what was probably the first attempt to cultivate beets for sugar in California. In 1838, one Octavio Custot, who subsequently was known by the surname of El Azucarero, the sugar-maker, came to Monterey on board a vessel. He thought that it would be easy enough to live by his wits among the simple-minded Californians, and accordingly deserted his ship. He traveled to Sonoma, in the course of time, and revealed to Gen. Vallejo, the autocrat of the frontier, the startling intelligence that he could make sugar from beets.

Vallejo was a man of progress, although he had passed all his life in this far-away wilderness. He had heard so many remarkable tales from strangers visiting him, bringing new ideas of things he had never heard of before, that he was ready to believe almost anything. He reasoned, indeed, that there was no reason why sugar should not be made from beets, and perhaps tea from oak leaves, and coffee from manzanita berries.

"Doubtless, all is as you say," remarked Vallejo, "but where are the beets?"

"Grow them," replied Custot.

"I have no seed," said Vallejo.

"Send for some," answered Custot.

Indeed, the cunning Octavio had counted on the lack of facilities all along, and on the easy days of waiting in store for him in a fat country with a beautiful climate and fair women. Vallejo finally sent the fellow to his major domo at Petaluma, giving instructions that four yoke of oxen, eight Indians and a dwelling and provisions should be placed at his disposal. So Octavio stretched himself at ease with his pipe, while the slow-moving oxen plowed 40 acres. Seed was found at Mazatlan, which was pronounced to be of excellent quality when it came to hand. "But," said Octavio, "nothing can be done now; it is too late to plant this season. So nothing remained to be done but to extend to El Azucarero his free and easy living at Petaluma during the summer. When at length the rains came again, the seed was planted and grew thriftily, producing very large red beets. Vallejo came frequently from Sonoma to see how the crop came on, and was much encouraged by the prospective enormous yield of sugar. He felt that his fondest hopes had been realized when, in July, a fine box of sugar arrived at Sonoma, consigned to his wife by Custot. The sugar was pronounced to be of excellent quality, and equal to the best loaf-sugar brought from Peru. Visions of a great industry passed before Vallejo's mind, and he felt that it would be easy enough to have thousands of acres sowed to beets, and to export sugar by the shipload. But presently his hopes were checked; his wife came in from the store-room with the declaration that a dozen loaves of her Peruvian sugar had been stolen. Then the truth flashed upon them—Octavio was the thief. Vallejo hurried to Petaluma and demanded that the process of manufacture be shown to him, but was told that the method would not bear too much light. "True, nor will yourself," replied Vallejo, as he ordered the impostor to be taken to Yerba Buena.

THE STOCK YARD.

The Meat Pool.

In the U. S. Senate, on the 3d instant, the bill for the establishment of a Bureau of Animal Industry and to facilitate the exportation of live stock and their product, was taken up, and Palmer addressed the Senate in favor of the measure, reading various communications to show the animus of the opposition to the bill, which was, he said, "machine work right through." The idea conveyed was that the opposition came from the existing Bureau of Animal Industry.

Vest said if half of that which was stated in the correspondence was true, the Commissioner of Agriculture should be hurled out of official life, disgraced and dishonored, but he (Vest) did not believe the statements. He could not support the bill. He proceeded to speak of what he called the "cattle syndicate," and said the people were helpless and in its power. There were five men and firms in the city of Chicago which regulated the price of cattle every day by their manipulation of market prices. These men owned the cattle-raiser's property and confiscated it as if they possessed the right to take it from his farm without paying him one cent. "Talk," said Vest, "about trusts, talk about pools; the cattle pool of Chicago is the most infamous tyranny that ever existed in the United States."

Plumb had also something to say on the same subject. In his opinion the worst combination in the country was that of the beef and pork packers, having its headquarters in Chicago. There was no trust or combination that had so powerful or baneful an influence as that combination. For years the prices of cattle to producers had been going down. They had gone down, he thought, 50 per cent. In the same time the price of meat to consumers had gone up, and every single dollar of the difference had gone into the pockets of that combination. Under the operations of this trust prices had declined unnecessarily and destructively. It was safe to say that on every steer of three years old and upward raised west of the Mississippi river during the past five years the market value had been by this combination reduced not less than \$10 per head. The damage to the State of Kansas alone during that period had been more than \$40,000,000. This and the wealth of the syndicate had grown proportionately. They had committees here now, having in their pockets money of this stock-ring to get Congress to give them control of the question of cattle in quarantine. This "combine" had allies in the railroad managers. Step by step they had come to a condition where they actually fixed the prices of cattle just as if they were the men who raised them. He believed in giving the Commissioner of Agriculture all the powers proposed to be given to the commission, and would not vote for any measure that would detract from the power and dignity of that department.

Blair spoke briefly in favor of the bill, which then went over.

Range Interests.

A plain question of much discussion is answered to the range cattlemen to-day. The great problem of "how to better the range industry" has been a Gordian knot which the leading brains and best men of the business have been trying to straighten out for more than three years, or ever since the great frolic, the cattlemen's convention of 1884. The Southwest, New Mexico and Arizona have felt the decline in cattle values fully as much as any other section, and in New Mexico much thought has been applied for a remedy.

The thinking cowman of to-day looks over the events of the past two years, puts two and two together, and says: "It is North vs. South," not in the old rebellion spirit, but as a living fact of the cattle business as it now is."

To the north, in Colorado and the maturing range, is seen (to use a stock market expression) the bear element, composed of those who would buy the steers from the breeding section, and the big, or little, brokerage concerns, whose money is made from the commissions received for selling the steers of New Mexico, Arizona and Texas to the aforementioned owners of maturing ranges. All of these people, looking over the record of the transactions (sales of southwest steers to Colorado buyers) have helped in a great measure to reduce the price of range cattle. Their constant cry has been "too high, knock off \$3 a head." These buyers of young steers have had things pretty much their own way for the past three years and have helped the dressed beef men to impoverish the range breeder of the Southwest. Some of the brokers have stood in with the play and have helped to squeeze down the prices paid for steers, even while posing as the wood-be saviors of the southwestern range-men.

Look at the record of the southwest. The California boom developed a heavy demand for beef on the coast, and half a dozen cowmen have stepped into the slaughtering business, and not only opened a market for the product of their own ranges, but have branched out and are now disposing of a large portion of the beef stock of the southwest at good prices. These men do not screw down prices and then charge their fellow-cattlemen a dollar a head for "not

breaking up a trade." These men say, "Sell us your cattle and we will pay you what they are worth." And they are paying from two to three cents a pound on the cars for steers.

An ounce of practice is worth a ton of theory, and the development of the California market has already been worth more money to the cattlemen of New Mexico and Arizona than all the trusts, secret schemes and other locoed, wind-pudding, self-blowing side-shows ever thought of.

The thing has solved itself and the value of cattle enhanced, not by any scheme emanating of brilliant minds, but by the natural course of events. It came by itself and shows the cattlemen that if they stick to the old cow and let time fix up things all will be well. Drop, like a hot iron, the men who say that cattle are too high, and that the better time will get here in three or four years. Don't sacrifice your steers to the men who make \$20 a head for running them a year and a half on Colorado free grass. Try the California trade and the northern market will improve all the sooner.—*New Mexico Stock Grower*.

THE DAIRY.

A Shasta County Butter-Maker's Method.

I have learned by long experience about making what I call good butter, and preserving it nice and sweet after it is made. To keep butter good that is made in the fall is one thing, but to keep that good that is made in summer is quite another. Our best and richest butter is made in May, June and July, when the cows milk strong. The best of butter may easily be kept good till April of the following year, and here is the way I do it: First, it must be good butter when made, all the buttermilk must be worked out. My practice for years has been to thoroughly wash the butter before it is taken out of the churn, and I am confident that the plan is a good one. Salt to suit the taste of those who are to eat it—half an ounce of salt to a pound of butter is about right. Keep out all your saltpeetre, sugar, or other ingredients—it will keep better without them, and, perhaps, too, without salt, but would not be so palatable. Do up the butter each week, on churning, in neat, round rolls of two or three pounds each, just what you have to put down; cover each roll with a clean muslin cloth, large enough to round it twice or more, that it will be completely enveloped, and sink it in a strong brine, as strong as the best salt will make it. Stone vessels are the best. When the rolls are in they may be kept sunk down by means of clean flat stones. When the vessel is full enough and the butter completely covered with the brine, add more salt to insure the strength of the brine. Keep it in your cellar or in your spring-house, and see if it is not worth in winter and spring 100 per cent more than any winter-made butter. In this way I have kept all my winter supply of butter for many years, and have never yet failed. But mark, the butter must be good, well worked, and should, by all means, be wrapped up and sunk under the brine the same day it is churned, not kept lying about for two or three days after churning.—*Cor. Shasta Courier*.

Butter Yield per Cow.

The *Journal* has often talked with its butter-making readers on the subject of culling the dairy herd, and perpetuating the fittest. We believe this is one of the most important things to attend to on a dairy ranch. And not a few of our dairymen are giving their best thought to it. The surest way to proceed in culling a herd is no doubt that practiced by a dairyman in an Eastern State, who recently gave his method and its results to a convention of butter-makers. He said he had been dairying with 40 cows for 20 years, and his cows had averaged 150 pounds of butter per year, and with that he was satisfied. His returns was about \$37.50 per year from each cow. One day he read in the *New York Tribune* the experience of a man who tested his cows separately, and was greatly surprised at the difference he discovered in the amount of butter produce derived. He was so much impressed with the figures given that he resolved to take the trouble to test his own herd. Accordingly he arranged to keep the milk of each cow separate, and churn the product of each by itself, until he could determine the exact results, and see whether it would be best to segregate the cows, and confine himself in future to the offspring of the best. The result of his experiment was astonishing from the first. He found the milk product of his herd varied all the way from 18 to 40 pounds per cow. But this was not all. Some of the lightest milkers produced the most butter. He then commenced raising only the heifers of the best butter-producers for his own use and selling off all the others. And in a short time he found he had increased the average yield of his herd from 150 to 266 pounds a year per cow. An increase of 116 pounds per cow each year, or a money produce of \$62.50 instead of \$37.50. And the improved herd ate no more and took no more care than the old one. There are many dairies in Marin county on which equally startling improvements could be made by culling the herd. Some of our dairymen are already alive to the importance of this point, but by no means all. Many cows are kept in the herd and milked

year after year, which are good for nothing but beef. Others are large milkers, valuable for a city milkman, but not worth their feed on the ranch as butter producers. An expert can almost unerringly pick out the best cows for butter by their marks and appearance, but the surer way is to test their produce, and insist on the Darwinian law, the survival of the fittest.—*Marin County Journal*.

THE IRRIGATOR.

Another Riparian Rights Decision.

The recent decision by the Supreme Court seems to make more certain that it is only riparian law and precedents which our judges can accept. The *Tulare Times* reviews the decision and comments upon its effects as follows:

The decision of the Supreme Court of the State in the case of Hielbron et als. vs. the Fowler Switch Canal Co., strikes us as being most disastrous to the appropriators. Instead of being, as we had hoped, more liberal toward irrigation than former decisions, it is more ultra riparian than the famous decisions of Lux vs. Haggin, rendered four years ago.

The Fowler Switch Canal Co. several years ago appropriated 1500 feet of water from Kings river, built a canal having a capacity of 1500 feet, at a cost of \$110,000, and have, usually, diverted less than 300 feet, but none of the canal-owners, nor the lands watered, are riparian, and no part of the water can get back into the river again. The issue is, therefore, squarely defined between riparian owners and the appropriators who are not riparian owners. The canal company did not and could not plead the statute of limitations so that was eliminated from the case.

The defense the canal company sought to make was, that it does not propose to divert and has not diverted water from Kings river when such diversion would materially injure the riparian owners below, or when it would cause an appreciable diminution of the volume of water flowing in the river, thus relying upon the doctrine that when enough water was left in the river to supply the reasonable wants of all the riparian proprietors, the appropriators might have the rest.

Surely it was not too much to expect of the Supreme Court that it would accord the appropriators the right to use water that the riparian owners did not need, but not so. According to this decision, the only time when an appropriator, who is not a riparian owner also, can take water from a stream is when such a flood exists as would actually damage the riparian owner were the water not taken out. The appropriator can not divert the water even when the river is bank full, nor yet when it overflows its banks, if the riparian owner prefers to have it overflow. He may venture to take water only when he sees the riparian owner's cattle drowning and his buildings floating away. Upon this the court said: "But the rights of the riparian proprietor do not depend upon the quantity of water flowing in the stream, nor can that flow be said to be an extraordinary flood which can be counted upon as certain to occur annually and to continue for months." Further on the court plainly implies that the only water an appropriator may take is that of "casual and unusual freshets." The opinion in this case was written by Jackson Temple and signed by McKinstry, McFarland, Thornton and Sharpstein.

Now, appropriator, look this matter squarely in the face, and where do you stand? The fact of the business is you can have no standing at all in any court in this State. The statute of limitations is your only hope. If you have diverted water for five years, uninterruptedly and adversely, and not a single riparian owner below you has objected during that period, and no one of the riparian owners below you has been under any legal disability during that time that would prevent his objecting, you are safe in your right to divert water, otherwise you have not a shadow of right, and can not acquire it by appropriation. The riparian owners of California have the right to the full flow of the streams of California, "undiminished in quantity and unpolluted in quality by any appropriator, who is not also a riparian owner," to everything except "casual and unusual freshets."

For five years the *Register* has fought this doctrine, believing that it was unsuited to California, unjust and bad law. We are of the same opinion still, but we throw up the sponge. We relied solely upon the principle that "when the reason for the application of a law of judicial decision failed, the law failed," and we had hoped that the accession to the supreme bench of such men as McFarland, Temple and Patterson would result in the overthrow of the ultra riparian law by the application of that principle; but our hopes have been blasted and we give it up. Whatever water is taken out of any stream hereafter by any one not a riparian owner has got to be taken by condemnation and payment, and the problem of the application of the statute of eminent domain has got to be solved.

Still Hopeful.

The *Hanford Sentinel* encourages the writer of the foregoing as follows: "Hold on to your sponge; don't throw it up. You have done heroic work in the past. Let us never give up the ship." There is justice in the background, and this decision will help bring that justice to the front."

THE GARDEN.

An Excellent Lesson on the Gopher-Snake.

EDITORS PRESS:—Will you kindly allow me space in the columns of your widely-circulated periodical to enter my protest against the cruel and wanton destruction of one of the very best friends of the horticulturist and general farmer?

I refer to the killing of gopher-snakes and other varieties of harmless serpents. It is an act of insane folly to destroy them, for they are the most active and efficient allies of the nurseryman, farmer and fruit-raiser in the destruction of those most pernicious pests, the gopher and the squirrel.

They destroy more gophers than all the appliances that man can bring to bear on them in the shape of traps, poisons and gasses. Their whole work is beneficial to man without a single drawback. They do not eat his grain, his alfalfa, his fruit or his fruit-trees, but are most active and persistent foes of those that do. They are his truest allies, as they wage a relentless war upon his enemies, the gophers and the squirrels, whose whole lives are spent in destroying the fruit of man's industry, and that have not a solitary redeeming quality to recommend them.

As school-children are generally very active in killing snakes and have not the slightest idea that there is anything wrong in so doing, I would recommend teachers and others interested in the management of our public schools, to give them some instruction on this subject.

My attention was directed to this topic a few days since by the killing of two gopher-snakes by the boys attending our public school. The teacher took occasion to kindly reprove the boys for their act of wanton cruelty to a most inoffensive reptile, and to point out the folly of destroying that which killed more gophers in a week than they could hope to accomplish in a year. He said:

"None but a friend of the gopher will kill a gopher-snake." He asked them: "What kills so much of our alfalfa?" "Gophers," was the response. "What kills so many trees in our nurseries and orchards?" "Gophers," replied the scholars. "What harm do our gopher-snakes, garter-snakes and red-racers do?" "None at all," was the unanimous answer. "Well now boys, tell me what good they do." "They kill gophers!" shouted the whole school. "Then is it a wise or a foolish thing to kill these most useful and innocent friends of ours?" "A very foolish thing," was the unanimous vote. "Now boys," he said in conclusion, "I want to know how many friends the gopher has in this school. All friends of the gopher will raise their hands." Not a hand went up. "Well then let me see how many friends the gopher-snake has." Every one raised his hand.

He then told them that in future they must be friends of either the gopher or of the gopher-snake, and to remember which side they were on.

I believe much good can be done by the teachers throughout the State, by pursuing a course somewhat similar to the above, contrasting the benefits conferred by the reptiles with the damage done by the rodents, and then enlisting the scholars on the side of the reptiles under the motto: "None but a friend of a gopher will kill a gopher-snake." R. B. W.

Poway, San Diego.

Asparagus-Growing.

EDITORS PRESS:—In your issue of April 14th you allude to Mr. E. Leedham's method of growing asparagus. My experience proves to the contrary.

In Massachusetts, where it is grown with great success for the Boston market, two-year-old plants are put in rows three feet apart, and one foot apart in each row, and from 12 to 18 inches deep, the ridges leveled by hoeing during the season. The ground is fertilized heavily annually, and the third year it is generally cut. As the grass gets older the roots work toward the top, and by setting deep cultivation is easier. If the gentleman had many acres set two inches below the surface, I think he would find it difficult in cultivating or plowing the fertilizer in. I have a small patch set shallow, and every spring or winter I am obliged to spade the manure in, and even then some of the roots are chafed.

To prove to my mind that deep setting is the better plan, a few years ago I put out several rows, as before described, and I can plow it readily; grass grows just as early, and produces equally as much. On February 14th I began cutting on both beds.

In regard to the cutting, the bleached is tender and is good flavor. If one permits it to grow several inches high it is not as tender as when cut just above ground. Many prefer that part, from the fact that the bleached has not been tried. It is my opinion, if it is set deep the expense of cultivation is reduced, the land holds the moisture better and longer, and will produce annually more with proper care than if set two inches below the surface. A few years

ago in Massachusetts acres were planted shallow, as they felt it would start earlier in the spring, and it proved a failure, causing extra expense in cultivation, etc. They were plowed up and deep setting adopted, and it has proved a success. The same result will apply to California soil. N. B. SMITH.

San Buena Ventura.

PISCICULTURE.

The German Carp.

EDITORS PRESS:—The little note in last week's *RURAL*—"A Reminder of the Carp Craze"—recalls to our mind many other such crazes and speculations.

If the parties who labored so hard to introduce this really most valuable food-fish to American waters had been careful to inform every one that the carp is a fish that would not be relished by scarcely any one when cooked and served as we in this country usually cook fish it would have a different standing to-day. Scarcely any one would care to eat it when so cooked. It is not a "pan fish," or, in other words, it is not acceptable fried or broiled, or baked or roasted, as we usually bake or roast fish; but it is a most palatable and nutritious food when cooked and served as it is in Europe. I cannot here give the right formulas for cooking carp, but have read them and eaten carp so cooked and know that it tasted good even to one not familiar with the dishes.

The peoples of Europe have many dishes in common use that are nutritious and wholesome that we cannot eat at all on the first trial, prominent among which may be named sauer kraut, Limburger cheese, etc. Even lager beer, now in such common use all over this country, is relished by but very few on its first acquaintance. Even the costly and high-priced and highly prized "dry" Rhine wines are not highly prized by the American people for their delicious taste, smell or flavor on first acquaintance.

The German carp is simply the base, the foundation for many well-liked dishes. These dishes are highly flavored with many condiments, herbs, and vegetables. And by these means the rank, muddy taste of the fish is covered up, to a great extent, and being so covered up the strong flavor of the fish adds to the high flavor of the mass, in the same way that the rank musk, which all know is highly offensive when pure and fresh, but when largely diluted and mixed with other and more delicate perfumes, is very acceptable, and adds body and lasting qualities to the whole. Then the point is, when you have grown your carp learn how to cook him and you will not be disappointed.

It has been often remarked that "he was a very brave man who ate the first oyster." Yes, he must have been very hungry indeed. The oyster is one of the lowest forms of life, and one in all its forms really disgusting to sight, and there are very few persons who would relish them in any form at the first trial. Yet how soon nearly every one learns to be very fond of them. The same is true of many other things that we and the European and other peoples habitually use, and some of these things are among the most nutritious and valuable of foods. Again, we find that several things that are most delicious and captivating to our tastes are not proper foods, and decidedly unwholesome.

We also reject many food elements that are highly nutritious and wholesome, and easily obtainable from no good reason, only simply because it is the habit or fashion to reject them, and no other good reason whatever. Millions of tons of good, palatable, nutritious, wholesome food is so wasted every year. We eat the most filthy hog and chicken, but reject the cleanly horse, mule and ass. We reject the clean, vegetable-feeding snails, the succulent angle worm, and eat oysters, clams and carion-feeding lobsters, crabs and shrimps, etc. The streams of the Prairie States East were in early days swarming with fish, and two-thirds of the species caught were thrown away or unfit for food. Now most of these, since the people have learned how to cook them, sell readily, and one of them, that used to be considered utterly worthless, is now sought for by many people before any other fish, and one of the only two, now always thrown away in Northern waters, is considered in Southern waters among the very best of fresh-water fishes.

Here in California, where all peoples and races meet, all wholesome foods should find a market. Here we have French to eat horse meat, frogs and snails, etc.; Spaniards and Italians for squids (cuttle fish), garlic, etc.; Germans to eat sauer kraut, Limberger and Switzer cheese, carp, blood puddings and liverwort, etc.; Chinese to eat birds' nests, dried ducks and geese, and many other things disreputable to mention, and hoosiers, suckers, etc., to eat fried hog, mush and milk. Negroes to eat hoe-cake, possum and "coon." In fact, the San Francisco market should furnish all these delicacies of the world's people. Besides we have here old retired whalers who have learned to appreciate steaks from the true or Greenland whale, seals and walruses, and Indians to glean the plains and mountains for seeds, roots and nuts. There is little flesh in water, earth or air but what could be made acceptable, wholesome and nutritious food for man, if properly served, and many vegetables that would help to sustain life, that we never use.

San Francisco.

D. B. WIER.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

San Joaquin County Picnic.

EDITORS PRESS:—The second annual basket picnic of the Patrons of Husbandry of San Joaquin county will be held under the auspices of Lodi Grange at Wardrobe's Grove in Lodi, May 18th. Officers of the day—President, J. D. Huffman; Marshal, S. W. Sollars; speakers of the day—Hon. J. J. Woodman of Michigan, Hon. J. V. Webster of San Luis Obispo county, B. Pilkington of Santa Cruz, Hon. A. L. Chandler of Sutter county, and others. Procession will form in Lodi Grange hall at 10 A. M., and leave the hall at 10:30 A. M. promptly. Larson's tent and floor will be placed in position at the Grove for dancing. Various amusements will be provided and different prizes will be contested for. At 12 M. the Linden and Lodi clubs cross bats for a purse of \$20. Grand ball will be given at Park hall in the evening. J. D. HUFFMAN.

Grange Entertainment.

Elk Grove Grange gave a very pleasant entertainment on the evening of April 24th, which consisted of an address from Hon. Gillis Doty, vocal and instrumental music and recitations, which were highly enjoyed by all present. Elk Grove has some fine musical talent. The recitations listened to were very interesting and creditable to those who took part in the exercises. Occasions of this kind are productive of great good, as they help to develop the young mind, and those who listen go away feeling better and happier for the sweet music and good lessons from the children. If all Granges would occasionally give an entertainment of this kind it would add interest and valuable members to the Grange.

Contra Costa G and B. Association.

The annual meeting of the Contra Costa County Grangers' and Business Association was held at their hall on Wednesday, May 2d, 1888.

The meeting was called to order by the President. Present, J. Strentzel, President; Geo. P. Loucks, Secretary; F. M. Warmcastle, John Larkey, J. W. Jones, A. Boss, Directors. A majority of the stock was represented.

The minutes of the last meeting were read and approved.

The President presented his report as required by the by-laws, and on motion of D. N. Sherburne it was unanimously accepted.

On motion of D. N. Sherburne, seconded by C. S. Whitcomb, it was ordered that the Secretary cast the vote for the present Board of Directors, excepting H. M. Hollenbeck, who is out of the county, and in his place James Kelly be elected.

Whereupon the Secretary cast the vote of the stock represented, to wit: 32 shares, for J. Strentzel, F. M. Warmcastle, G. P. Loucks, John Larkey, J. M. Jones, J. M. Stone, R. O. Baldwin, A. Boss, J. Kelly, who were declared duly elected directors for the ensuing year.

On motion of C. E. Howard, seconded by D. N. Sherburne, a vote of thanks was tendered the Board of Directors for their services during the past year.

There being no further business meeting adjourned *sine die*. G. P. LOUCKS, Sec'y.

The Board of Directors subsequently met and organized by the election of J. Strentzel as President and F. M. Warmcastle as Vice-President; Geo. P. Loucks, Secretary; John Larkey, Treasurer; J. W. Jones, A. Boss and James Kelly, Auditing Committee.—*Contra Costa Gazette*.

The Half-Interest Swindlers.

Simon Hamberg, who so cruelly swindled Parker, the Oregon farmer, out of all he had some time since, had his second trial on the 3d inst. Hamberg made an elaborate defence, asserting that he had acted in good faith, and that Parker was aware of the fact that he was purchasing only a disputed title to the property. This defense was completely shattered by the testimony in rebuttal of his partner, Pilcher, who had pleaded guilty to all the charges against him and now awaits sentence in the county Jail. His testimony was to the effect that the gang had deliberately intended to swindle Parker. The quit-claim deed of the so-called Ellis title which was sold to Parker, Hamberg knew to be worthless. The scheme was to purchase the deeds from Mary Ellis for \$50 a piece and dispose of them to unsuspecting Grangers for thousands. Pilcher concealed nothing in his exposition of the

methods of the unholy partnership. He said that the lots claimed under the Ellis title were the best to deal with, for they cost so little. As his companion in crime told his tale, Hamberg moved restlessly in his seat and whispered excitedly in his counsel's ear. The latter was also somewhat perturbed. On cross-examination Pilcher denied that any inducement had been held out to him to testify. A verdict of guilty as charged was returned within 20 minutes.

List of Grange Picnics.

Sebastopol Grange, at Morris' Grove.....	May 12
Yuba City Grange, at Hock Farm.....	May 15
Magnolia and Grass Valley, at Indian Springs.....	May 25
Bennett Valley Grange.....	May 26
San Joaquin County Granges, at Lodi.....	May 18
Sacramento County Granges, at Beach's Grove.....	May 22
Pescadero, San Mateo County.....	May 25

Secretaries are requested to send in dates of picnics yet to be held as soon as possible.

ARBOR DAY was more generally celebrated by members of the Granges in many States than ever before. In several States the Masters of the State Granges issued an official proclamation offering suggestions for the observance of the day. Thus through organized effort many thousands of trees have been planted along the roadsides, around schoolhouses and about the homes of farmers. A spirit of improvement has been stimulated, a love of the beautiful and ornamental cultivated, and the great work the Grange has in view of upbuilding and improving the condition of the American farmer, in every way been advanced. Outside farmers, noticing these practical applications of Grange teachings, these actions that speak louder than words, are coming more and more to see in it one of their greatest helps toward success.—*Mortimer Whitehead*.

GRANGE DECORATION DAY.—On Saturday, April 28th, North Butte Grange observed what has been established as Decoration Day by the National Grange. Says the Marysville Appeal: "This was the first observance of the day by a Northern California Grange. Rev J. E. Anderson of this city delivered the oration, after which the graves of deceased Patrons of Husbandry were literally strewn with flowers."

PICNICS.—As will be noticed by our list of picnics, there are several good times in store for Patrons and their farming friends within the next two weeks. We hope to hear from picnics that were held during last week. These occasions are always so enjoyable that we trust no one will miss attending them who can.

SACRAMENTO COUNTY GRANGE PICNIC, which was to have taken place at Beach's Grove, on the 3d inst, has been postponed until the 22d. The inclemency of the weather was the cause of postponement.

POSTAL TELEGRAPHY.—It will be remembered that in January and again in March Dr. Norvin Green, President of Western Union Telegraph Co., appeared before the United States Senate Committee in the interest of that great corporation. Dispatches from Washington state he has now been addressing the House Committee on Postoffices and Post Roads as to the Hopkins bill to establish a postal telegraph. Such an enactment would, he said, be a monstrous wrong. If the Government contemplated doing a telegraph business, was there any proper way to do but take the existing property and pay for it? The remarks, he said, were not made with a view to selling the W. U. to the Government. The Government did not need a telegraph. It would not benefit the Government. The W. U. did not want to sell, but its purchase was the only proper basis on which the Government could go into the telegraph business. It should take all the existing property and do the business exclusively.

THE CONTRA COSTA GRANGERS' JOINT PICNIC, which came off, as per program, the 5th inst., proved highly successful and delightful. The weather at Danville was lovely. Prominent persons from various quarters were present. Hon. Nathaniel Jones presided, and addresses were made by Hon. Chas. Wood, W. L. Daniel Flint, President E. B. Smith of the Contra Costa Board of Trade, W. M. Overhiser and Sen. Chandler of Sutter county. Social conversation and an enlivening dance in the Grange hall enhanced the pleasures of the occasion.

A FARMERS' TRUST FORMED IN KANSAS.—Two hundred delegates, most of them from Kansas, met at Topeka on the 1st of May, to discuss plans for organizing an association to regulate prices and dispose of farm products. Ex-Gov. David Butler of Nebraska was elected president; Cleveland Moulton, vice president and J. B. Ferguson of Kansas, secretary. On the 3d—supposedly as the result of this convention—the charter was filed for the Farmers' Federation of the Mississippi Valley. The capital stock is \$20,000,000 of 200,000 shares at \$10 each. The charter is signed by citizens of 14 states and three Territories.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

GOOD RETURN FROM STRAWBERRIES.—*Gridley Herald*, May 3: As evidence of the value of little things we cite our readers to the strawberry patch of Mrs. Levi Smith, one mile north of town. She has been selling an average of \$4 worth a day for nearly three weeks past, and the supply on the vines is sufficient to keep up that rate for at least two weeks longer. There is scarcely one-sixth of an acre planted to vines. Owners of small tracts of land should visit the place and see how easily it is done.

Contra Costa.

A FOWL TURNCOAT.—*Martinez Item*: A woman in town has a chicken that is a curiosity. Until moulting last fall it was jet black, with the exception of a few white feathers about the head. After moulting the feathers grew out white, and it is now as white as snow.

Lake.

TURKEYS ON THE RANGE.—*West Lake Cor. Avalanche*: The poultry business is an important industry in these parts. It must be evident to any one who sees the flocks of fine, large bronze turkeys disporting over the hillsides that it is a paying business. Some ranchers do not feed their fowls the year round, but let them range the hills the same as sheep. In summer, when the vegetation looks dry and dead, their sharp eyes spy the seeds of the early spring flowers, and they may be seen picking busily all day long. As the season advances, the ground is thickly spread with a low plant with long branches covered by whitish, velvety leaves. It is a mystery that dust, so free from moisture, can yield such a luxuriant herb. (Your correspondent has never heard its botanical name; the ranchers call it turkey mullein.) By the time the dry seeds of the spring are gone, it has, hidden away beneath its flat leaves, black, oily seeds as large as hempseed, on which the fowls fatten.... Frank Knox has nearly 50 hen turkeys sitting. There are over 20 eggs under each. Just think what a number of Thanksgiving dinners these represent!.... For over a year a certain gray eagle, as large as "Old Abe" of war fame, has conceived the idea that this range belongs to him, and many a turkey dinner has he enjoyed. Mr. Knox, with some of his neighbors, offers a reward of \$5 for his head.

AGRICULTURAL ASSOCIATION.—*Lakeport Democrat*: By an oversight we neglected to note last week the meeting of the Directors of the 12th Agricultural district. L. G. Simmons was elected president, Jno. R. Cook, secretary; Q. V. P. Day, treasurer. Simmons, Boggs, Burger and Keatinge of Lake, and F. L. Townsend of Mendocino were appointed an Executive Committee to make all necessary arrangements for the next annual fair. No date for the fair has been set as yet, but it is probable that it will be held the last week in September. This will give our farmers, mechanics, and others, ample time to prepare something for exhibition, and it is to be hoped no one will let the opportunity slip without doing something for the credit of the county.

Los Angeles.

SUPERB ROSE TREE.—*Pasadena Union*, April 27: By the side of H. J. Baker's barn, on Orange place, there is a rose tree which Mr. Baker calls the "Pride of Pasadena." At the base the trunk is 10 inches in diameter; a short distance above it branches out into numerous runners, which have grown upward and spread out over an arbor covering a space of nearly 400 square feet. The magnificent plant is in full bloom and bearing three kinds of roses. The Safrano, a beautiful cream-colored rose with a faint tinge of pink; the Marechal Niel, a yellowish rose which is equally beautiful; and the famous La Marque, whose flowers of snowy whiteness are much admired. There must have been on the tree at the time of our visit upward of 2000 roses of the several varieties, and a large number of buds of various sizes. Mrs. Baker said it was in bloom constantly. The tree is 12 years old and was budded by P. M. Green, president of the First National Bank. The runners would have been much longer and covered more ground had it not been unfortunately broken once or twice. At one time the arbor which supports the upper runners gave way, and the whole thing came down with a crash, breaking several of the larger branches. It certainly is a magnificent plant and is highly prized by Mr. and Mrs. Baker.

ABOUT ANAHEIM.—*Gazette*, May 3: J. F. Thacker of the well-known Chicago house of wholesale fruit-packers, is authority for the statement that his firm will build a packing-house at Anaheim.... R. J. Northam has sold his beautiful Vineridge tract of 107 acres near Fullerton to A. F. Batsford of Port Huron, Michigan, Daniel McFarland, Dr. Calcius and Jaro Von Schmidt for \$35,000. Mr. Northam, having disposed of Vineridge, will give his attention to establishing a large walnut orchard near town.... Bees have become a terrible nuisance. In every house, barn or outbuilding where they can find entrance and protection they have quartered themselves. The work of extermination has been going on for some time but with little success. As soon as one swarm is dislodged another takes its place.

Marin.

FLORAL FAIR TO COME.—*San Rafael Journal*: The second annual flower festival for the bene-

fit of the free reading room and circulating library, will take place in Gordon's opera house, May 16th. Although the lady who shouldered so much responsibility last year has moved to the city, she will come back and assist her friends with all her well-known interest and enthusiasm to make the affair one of the most enjoyable ever known in San Rafael. There will be a grand promenade concert and bazaar combined with the flower festival.

A HANDSOME HAWTHORN.—Probably the most elegant flowering tree—you cannot call it a shrub—to be seen in this valley is a hawthorn in Mrs. Barbara Sims' yard on Fifth street. It is about 20 feet high, of lordly proportions, and every branch is a mass of flower clusters. If it could be exhibited in San Francisco, it would draw thousands of floral worshippers.

Modoc.

IMPORTING ASSES.—*Adin Argus*, April 26: Wm. Dodson of Cedarville is now on his return trip from Tennessee, with a carload of the best jacks and jennies he could find in that State. The raising of mules is without doubt the best and most profitable business to be engaged in our county, and this move of Mr. Dodson will strengthen that business wonderfully.

Monterey.

THE CROP PROSPECT in the Salinas Valley, from Soledad to Moss Landing, is as good as it has been for many years. While there is perhaps not as large a growth of straw as in past seasons, yet it all stands erect and will be in splendid condition to harvest. People who have traveled extensively over the State say that the grain looks better in the Salinas Valley than in any other place they have seen. The prevailing cool weather is very favorable to the crops.

Napa.

FAIR ASSOCIATION.—*Napa Register*, May 4: A meeting of those interested in a County Fair was held in the Court House Saturday afternoon. Hon. M. M. Estee was elected Chairman and A. H. Conkling Secretary. The Committee on Subscriptions reported \$10,675 subscribed, and \$750 more promised. A resolution was unanimously adopted to the effect that a committee of three be appointed to look up a suitable place for holding the fair; and that they be authorized to hire a surveyor, at a cost not to exceed \$50. F. L. Coombs, A. J. Raney and F. Brughelli were appointed that committee. The following gentlemen were chosen to act as Directors for a term of two months, when an election will take place: H. W. Crabb, F. W. Loeber, Nathan Coombs, L. L. James, W. J. McCollum, John Even, A. J. Raney, G. M. Francis, M. M. Estee.

Nevada.

FRUIT VERY PROMISING.—*Grass Valley Union*, May 2: The prospect in Nevada county was never more encouraging, and the season is so well advanced that there is little reason to fear damaging frosts. The principal fruit crop will be apples and pears, though all are doing well. Mr. A. B. Driesbach of Indian Springs informs us that he has never seen so fine a showing as the grapevines are making. He has an orchard of several hundred young peach trees, set out two years ago, and these are so loaded with fruit that a large part of it will have to be picked to save the trees from breaking down. Nearly all of the growing peaches are double, and many of them of triple growth. These trees are all remarkably thrifty and have been raised entirely without irrigation. All the orchards of the western part of the county are showing finely, as well as those about Grass Valley and Nevada City.

Placer.

BEES BESET BOSSIE.—*Newcastle News*: The other day Mr. A. G. Abbott's calf was tied with a rope to a post about 100 yards from a beehive. The bees took a notion to swarm, and selected the calf's head on which to settle! The calf protested and the bees immediately declared war. Mrs. Abbott, seeing the unhappy position of the calf, hastened to its assistance. The calf was nearly stung to death.

San Benito.

ALMONDS AND PRUNES.—*Hollister Free Lance*: G. A. Moore drove into town this week with a load of almonds. He was asked about the profits accruing from his 3500 trees, and replied that on an average they netted him \$75 an acre. His prune trees have netted him an average of \$200 an acre. Still there are some men who say there is no money in fruit trees.

San Diego.

NAVEL ORANGES SHIPPED EAST.—*National City Record*, May 3: Yesterday Frank A. Kimball shipped the first carload of Navel oranges ever sent East out of National City. There were 362 boxes of the finest Navels ever wrapped in soft paper, all carefully packed and protected against bruises. S. I. Fox, of Fox Bros., San Diego, accompanied the shipment, principally for the purpose of showing what the fruit is and telling where it came from. He will stop at Kansas City and thence go to Chicago. Another carload of the same fine fruit goes East to-morrow.

San Bernardino.

NAVEL ON SOUR STOCK.—*Valley Echo*: We must acknowledge that a sample of the Navel oranges grown on sour stock, which we tasted at Twogood's warehouse lately, was extra good. How it could be any juicier, sweeter or tenderer, we cannot conceive.

CANNERY COMPANY.—*Riverside Press*, May 5: San Bernardino has been having a canning

fever for some time, but with no practical results until this week, when Evans, Linville & Evans took hold of the matter and organized a company with a capital stock of \$50,000 divided into shares of \$25 each. They had \$10,000 subscribed the first day and \$5000 the second, and consider it assured. The name of the company is to be the San Bernardino Canning, Packing and Cold Storage Co., called for short, the S. B. C. P. and C. S. Co. It is their intention to handle all kinds of fruit and prepare it for market in all the different styles.

San Joaquin.

FINE BARLEY.—Stockton Independent, May 2: Yesterday afternoon Putnam Visser brought to town a sample of barley grown on his ranch, near Waverly, in this county. The barley stood five feet and two inches high, and was well developed. Mr. Visser estimates that the tract of 60 acres from which the sample was taken will yield 60 bushels to the acre. "This sample," said he, "shows what can be done by careful cultivation. The land was summer-fallowed and plowed twice, and the barley is as fine and clean as any you ever saw." Mr. Visser is justly proud of his barley field.

Santa Barbara.

FAIR DATE FIXED.—Santa Barbara Press: The directors of the Nineteenth District Agricultural Society have fixed upon the 11th of September, 1888, for the opening of their annual fair at Agricultural Park, to continue four days.

Santa Cruz.

ACCOMMODATING THE BERRY-GROWERS.—Pajaronian, May 3: Yesterday the berry-growers commenced shipping strawberries from Watsonville depot and made up a carload for San Francisco. When the Railroad Commission made its decision in the case of Edward White vs. S. P. Co., it was to the effect that strawberries must be received for shipment at Watsonville station and at the same rate as from Pajaro. Owing to the hours of freight trains on the Santa Cruz R. R. the decision was of no benefit last season; but the recent change in time has given an evening freight from Watsonville to Pajaro in season to make connection with the north-bound freight at the latter point. As this additional train mainly benefits Watsonville, and as it is a great accommodation to berry-growers, it looks as if the S. P. Co. intends to respect the order of the Railroad Commission. By shipping from Watsonville berry-growers have more time for picking and save the long and rough haul to Pajaro. In opening the depot, in handling freight at Watsonville, in putting on an evening freight train, and in shipping berries from the local depot, the railroad company has righted much of the injustice done our town.

RASPBERRIES.—Last week Capelli & Dondero shipped the first raspberries received in the S. F. market. They brought 80 cents per pound.

Shasta.

COUNTY FAIR.—Redding Democrat, May 2: The Shasta County Agricultural and Mineral Association have decided to hold a fair next September. The exact date will hereafter be advertised. The Association makes the announcement now, so that farmers, stockmen, and all interested; may have plenty of time to prepare a good exhibit of the products, resources, etc., of the county. September is the best month in which to hold the fair, because it gives the farmer and horticulturist the best opportunity to make a fine display of our products, on which mainly rests the success of the exhibition.

Sonoma.

THE ITALIAN COLONY.—An account of a visit to the Italian Swiss colony at Aati, near Cloverdale, appears in the Chronicle of May 7th, from which we make the following extracts: The land is mostly a succession of rolling hills of red land. From the 1500 acres purchased by the colony seven years ago the growth of oak has been nearly all cleared away, and now 700 acres are set out in vines, and 100 or so in fruit trees. The latter comprise cherry, apricot, Crawford peach, Bartlett pear, French and German prune and Italian olive trees. They range in age from one to five years, and are mostly in the rich bottom-land near the Russian river. All show evidence of careful treatment, and are wonderfully thrifty and vigorous. The olives, which are between two and three years old, have been planted along the county road on an elevation, comprising about 18 acres near the railroad station, and which bears the poetic designation of the Mount of Olives. As a rule the fruit trees are just coming into bearing, and the intention is to purchase drying machinery in order to properly market their product. The vineyards are about the same age as the orchards, the vines ranging from one to five years. In their cultivation about 50 men are usually employed. That the work has been well done is apparent from the total absence of all foreign growth, such as weeds, grass, etc., the thrifty appearance of the vines and the strong growth of young fruit upon them. In fact, in all the 700 acres of vineyard it would be difficult to find 50 sickly vines. They are mostly of the Zinfandel and Riesling varieties, though within the last two years several species of grapes from Northern Italy have been set out and appear to be doing all that was expected of them. The work is all done by Italians, who are paid so much a month. The superintendent, Mr. Vecchi, is an experienced and capable vineyardist and horticulturist. The idea of the colony originated with Mr. Sbarboro, who consulted with some friends, by whom the purchase

of the tract was made for \$25,000 seven years ago. The colony notion was, however, soon abandoned, and while the name was retained, a company composed of the purchasers of the property and some of their friends took its place. Since then \$175,000 has been expended in improvements, which, added to the interest on the money at the rate of seven per cent a year, would bring the total of the investment close up to \$300,000. That those who undertook the scheme are satisfied with its results and prospects is evidenced by the fact that they still remain its directors.

SANTA ROSA NURSERIES.—Democrat, April 28: R. W. Bell, well and favorably known in Sonoma and adjoining counties, has purchased the fruit and shade-tree department of the extensive and widely-known Santa Rosa nurseries; consideration, \$13,000. Mr. Bell's purchase embraces 263,000 fruit and 5000 ornamental trees. Luther Burbank, the founder of the nurseries, retains the olive and nut departments, and will attend to the management of his extensive horticultural experiment grounds situated in Santa Rosa and Sebastopol. The foreman and several employees will remain with the new firm; the others will be retained by the old one.

Tulare.

ALFILERILLA.—Delta, April 26: From Sunflower valley, in the southwestern corner of Tulare county, we received this week a sample of alfilerilla, two feet in length, grown wild on the ranch of D. F. Hughes. This wild feed is now being cut for hay, and cattle prefer it to any grown. It will be a surprise to know that feed of this kind is to be found anywhere in the foothills of the Coast Range in a year like this.

Ventura.

SANTA PAULA ITEMS.—Golden State: The new fruit-drier is in course of erection, near Main street, nearly opposite Mr. Easley's residence. It is to have a capacity of 20 tons per day.... Mr. Blanchard is shipping a carload of oranges and lemons each week. We are glad that his large orchard is beginning to yield returns for the large outlay of the past decade.... Certificate of incorporation of the Santa Paula Fruit Packing Co. has been received from the Secretary of State. Capital stock, \$30,000. Directors—C. H. McKevitt, W. H. Bradley, John G. Corey, George W. Faulkner, S. B. Sealey, M. H. Anderson and O. C. Carle.

Yolo.

BEARDLESS BARLEY.—Woodland Mail: This variety was introduced into this State from Mexico about four years ago and should not be confounded with "Bald" or "Nonpareil" barley, which it resembles only in the appearance of the head. It is claimed that this variety is superior to the bearded for several reasons: 1st. The straw is stiff and does not crinkle down when dead-ripe. 2d. It is hard to thresh, therefore will withstand the north wind better. 3d. Stock of all kinds devour the stubble readily after harvest. 4th. The absence of beards makes it the best hay grown. A sample of this grain in the head has been sent to this office by C. V. Burke of Yolo. He has a fine stand of 160 acres of this barley on his place a few miles from Cacheville, grown from seed imported directly from Mexico, the seed costing him over \$800 for the 160 acres.

SPECIMEN VEGETABLE GARDEN.—Capay Cor. Democrat: We have two vegetable gardens, the largest, known as the Aldrich garden, leased to Chinese, contains ten acres, and is now supplying the town and surrounding country with all kinds of vegetables, such as onions, lettuce, peas, carrots, radishes, beets, cauliflower, turnips, potatoes and strawberries. This garden has had new potatoes since March 20th, peas since March 18th, strawberries since March 24th, and the other named vegetables nearly all winter. While our friends on the other side of Rocky mountains were shivering with cold, we were eating green peas, fresh from the vine. They will have string beans in this garden by May 8th. This garden has many more kinds of vegetables which look nice and thrifty, and will begin to yield their crops in due time, such as tomatoes, watermelons, cucumbers, sweet potatoes, various kinds of beans, muskmelons, cabbage, etc. The smaller garden (run by the same parties) known as the Launer garden, is on the west side of town, contains about seven acres, and is planted principally in potatoes, cabbage, corn, sweet potatoes, squash and the like.

Yuba.

IRRIGATED GRAIN.—Appeal, May 4: Frank Lane has turned water from the Excelsior ditches running through the Brady place, at the edge of the foothills, on the road to Smartsville. He has irrigated that portion which he has planted in wheat, which is some 500 acres. When in this city recently Mr. Lane informed some friends that the grain was growing rapidly and looks well since being irrigated.

NEVADA.

STALLION SHOW.—Winnemucca Silver State, May 1: The third annual exhibition of the Paradise Valley Horse Association took place last Friday. The weather was all that could be desired, and the display of stallions was conceded by those who are competent to express an opinion to be the largest and best ever seen in Nevada. Among the most notable animals were E. W. Crutcher's thoroughbred horse "Charlie Laird" and Wm. Weighel's "Cleveland." Among the roadsters O. P. Crawford's "Gov. Irwin" and E. M. Samples' "Star of the West" attracted especial attention. In the

class "Horses of all work," the most noticeable were E. M. Samples' "Prince Charlie," H. C. Stewart's "Crown Prince" and W. Stock's "Bismarck" and "Black Prince." Stock's draft-horse "Paradise Prince" was also awarded the first premium in that class. Harvey Bros' "Dom Pedro" and "Lindsey," and Morey Bros' "Bealee," were among the finest horses on the ground, and John Reid's horse "Edward H" also attracted the attention of connoisseurs. All the above mentioned were awarded premiums. The sweepstakes for horses of all work was awarded to E. M. Samples' "Roan Charlie." The fine horses belonging to F. J. Button, H. J. Pratt, Rezonzone & Forgnone, Ed. Lyng, Mrs. Carrel, Ed. Stock, D. M. Coleman and J. V. McCurdy did not compete for prizes. The one, two and three-year-old colts exhibited were all remarkably fine animals, and excited much favorable comment.

Vacaville Melange.

EDITORS PRESS:—A nice shower, about half an inch, fell Thursday; it was much needed. Haying was commenced by many on the 2d, but had to be postponed on account of rain. The hay crop will be pretty good here, but a little short because of the hot weather in April. One lot of barley hay of 40 tons has been engaged at \$7 per ton, loose in the field.

It is reported that F. Buck has sold 200 tons of peaches, all clings, at 2 cents per pound and 50¢ tons of apricots at 2½ cents per pound to Manse, for the Oakland cannery.

Mr. Manse was at Vacaville a number of days, and engaged several lots of apricots at 1½ to 2½ cents per pound; but few 'cots could be bought here now for less than three cents. One gentleman near Vacaville has engaged his crop of dried 'cots at 11½ cents, he picking out the large ones to ship.

Painting Wagons.

R. H. Small wishes to know how to paint a wagon. This is an easy job if it is a common lumber-wagon. The paint can be bought ready mixed, excepting it will want thinning with oil; and directions for doing that are on the can. The price of the paint will depend on the kind used and where bought. Two coats are necessary, the first to be well dried before the second is put on. After the second, give a coat of varnish. If the wagon is to be striped, it would be well to hire a painter for half a day, as a bad job of striping is worse than none.

Soaking Wagon-wheels in Hot Oil.

A good plan to save blacksmith's bills and wagon-wheels is to soak the wheels in hot linseed oil. This can be done by making a trough or having it made at the tinners, of sheet iron, three inches wide, six inches deep and three feet long, in the shape of a half-moon. It can be made with legs to it, or set on two bricks. Fill it up with oil; set the wheel just high enough to turn clear of the bottom of the trough; build a fire under the trough, and when the oil is hot turn the wheel slowly about every five minutes for half an hour or more. If the tires be just a little loose, it will tighten them so they will run all summer, and be much better and cheaper than setting the tire.

Vacaville, May 6.

Failure of W. T. Coleman & Co.

The most startling event of the week is the assignment of W. T. Coleman & Co., which was announced on Monday evening. The following statement was furnished to the press:

Being unable to immediately realize upon our assets, and in view of the pressing engagements in New York, where the call on us for money is urgent, we have decided, in order to prevent a dissipation of our property, to assign at this end. Our assignees are Messrs. Louis Sloss and L. L. Baker. Our assets are from four to four and a half million dollars; our liabilities about two million dollars. Our indebtedness in California, with the exception of sums of no magnitude, is confined to four banks and two individuals. Until lately we have had hopes of being able to meet everything and place ourselves in excellent shape. Our assets and properties are very large, notably borax properties, in which we have heavy investments. This borax property we value at \$2,000,000, and have had until recently great hope of selling it. In fact, negotiations were in a fair way to be consummated when the Tarff bill, placing borax on the free list, tended to defeat our efforts in this direction. We are, therefore, reluctantly compelled to assign, and Mr. Coleman confidently feels that our resources are sufficient, with proper administration, to more than meet all our engagements.

Matters relating to the failure have been common talk since the above statement was prepared, but we do not see that any further information has been elicited. The failure is seriously regretted, and it is hoped that the work which the firm has pushed so energetically may be soon resumed.

FORESTRY.—The announcement is made that Thomas H. Douglas succeeds H. Rowland Lee as head forester of the State Board of Forestry. Mr. Douglas is a young man of experience, having been associated with the well-known tree-grower of Waukegan, Illinois, Robert Douglas. Mr. Douglas will find a fine field for forestry work in this State, and he has our best wishes for his success in it.

VINE PESTS.—We have received from J. H. Wheeler, Chief Executive Viticultural officer, an interesting statement giving remedies for vine pests which are just now troublesome. It will appear in our next issue.

News in Brief.

THE recent fire in San Diego caused damage to the extent of \$200,000.

ONE firm in San Jose sold over two tons of strawberries last Saturday.

THE Los Angeles Cracker Co.'s factory was burned last week; loss, \$50,000.

THE auction sale of foothill lands at Lincoln, Placer county, realized \$23,000.

INCREASING population has forced Redding to use additional power to supply water to the city.

COAL has been found in the Buttes, near Sutter City. It is a lignite much like that mined at Ione.

THE City Council of San Diego has fixed the tax levy at 89 cents on a valuation of \$18,000,000.

THE Folsom prison has sold \$89,950 worth of granite curbing and coping since sales to the public were resumed.

A NOTED baseball player was killed at Indianapolis lately by the ball from the pitcher's hand, hitting him in the temple while striking.

THE Marysville Woolen Mills are still six months behind with their orders, finding it impossible to keep pace with the demand of their goods.

THE old San Fernando mission is to be preserved. The old church is to be repaired, and the many curiosities will be taken care of properly.

IT is said that oil-fields more extensive even than those of the Caspian have been discovered in the Mackenzie River valley, close up to the Arctic circle.

THE salient point of the preface to General Boulanger's book is his advocacy of the right of the army to have a voice in the question of peace or war.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING MAY 1, 1888.

382,131.—HORSESHOE—J. E. Bingham, Walla Walla, W. T.

382,072.—NAIL OR RIVER FOR BOOTS OR SHOES—A. G. Cavalli, S. F.

382,142.—PIPE-RIVETING MACHINE—Geo. Cumming, S. F.

382,038.—PRINTER'S RULE CASE—M. C. Harris, San Jose, Cal.

382,002.—TRACE ATTACHMENT—W. J. Howard, Mariposa, Cal.

381,951.—FIRE KINDLER—Jas. Randall, S. F.

382,065.—STATION INDICATOR—Mary J. Watson, Sacramento.

18,286.—DESIGN SIDEWALK DEAD-LIGHT FRAME—P. H. Jackson, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Cattle Sales to Come.

Readers will not forget the sale of Shorthorn cattle from the well-known breeding farms of R. M. Dunlap and J. S. Latimer & Son, which will be held on the State Fair grounds in Sacramento on Thursday, May 17th. The cattle are expected to be on the grounds a week or more before the sale. Catalogues are out and can be had by addressing Dunlap & Latimer, Sacramento. An advertisement of the sale in another column names families, etc. This sale should be largely attended.

On the day following Friday, May 18th, Kilip & Co. will hold in Sacramento a sale of high-grade Shorthorn heifers by Bill & Burnham and W. P. Higinbotham, well known Kansas breeders. A reading notice elsewhere gives fuller particulars. We are told that this is a fine lot of young stock. The breeders are certainly A1.

Horse Sales.

The fifth annual sale of J. B. Haggin's thoroughbred carriage, driving and work horses took place in this city, May 3d. The sale was most successful and showed the increased demand for this class of horses, especially coming from such a responsible breeding farm as the Rancho del Paso. Kilip & Co. auctioned off the stock at a rapid rate. The high prices the horses sold at was very encouraging to the breeders. The total amount of the sales footed up the handsome sum of \$14,975. The lower price received for any one horse was \$100, while the highest was over \$400, but the majority sold in the neighborhood of \$200 each.

The monthly horse market held in Hollister, May 5th, was a great success. Seventy-one horses were registered, of which 38 were sold. The buyers were principally from San Francisco.

DEATH OF J. B. WOOSTER.—Many of our readers who knew Mr. Wooster as a dairy commission merchant (either as associated with Mr. Shattuck, or more recently under his individual name), will be grieved to hear of his death, which occurred in this city May 7th. He was highly esteemed, and during his funeral on Thursday the Front street stores were closed out of respect to his memory.

Little Boy Blue.

The little toy dog is covered with dust,
But sturdy and staunch he stands,
And the little toy soldier is red with rust,
And his musket molds in his hands.
Time was when the little toy dog was new
And the soldier was passing fair,
And that was the time when our Little Boy Blue
Kissed them and put them there.

"Now don't you go 'till I come," he said,
"And don't you make any noise!"
So toddling off to his trundle bed
He dreamt of the pretty toys.
And as he was dreaming, an angel song
Awakened our Little Boy Blue—
Oh, the years are many, the years are long,
But the little toy friends are true.

Aye, faithful to Little Boy Blue they stand
Each in the same old place,
Awaiting the touch of a little hand,
The smile of a little face,
And they wonder, as waiting these long years
through,
In the dust of that little chair,
What has become of our Little Boy Blue
Since he kissed them and put them there.

—Eugene Field in America.

The Sarcasm of Destiny.

Farmer Jones closed the door of the small brown farmhouse with a loud bang, and hurried out into the darkness and storm, muttering to himself: "Well, I have done my duty by the Colonel's wife, at any rate; couldn't turn 'em out just now and"—but the wind whisked away his words, and just as he gained his own door the storm broke heavily upon the earth.

For an hour the tempest raged, still Farmer Jones read on, occasionally stopping to stir the fire and remark to the silver-haired old lady opposite "that such a storm he had not seen for nigh on to 40 years."

The lady dropped her knitting, and gazing into the weather-beaten face of her husband inquired timidly, "You didn't turn 'em out, John, did you?"

"Well, no; not exactly that, wife, he answered, helping himself to a large, mellow apple from a dish near by, and slowly paring it with his jack-knife, letting the long golden paring fall at his feet; "not that, wife, but it will come to that in the end; can't be helped no way, for since the Colonel is dead, there is no one to lift the mortgage, and it's all Harold can do to get on alone."

"But I gave 'em two years," he continued, as if in answer to his conscience.

"Mercy!" interrupted the little woman, as in the lull of the storm a loud knock was heard at the door, "who can be out such a wild night as this? Do hurry, John, and unlock the door."

"Who! it's Joey Reed. What is the matter, boy?" asked the astonished farmer, as the light fell full in Joey's face.

With a toss of the snowflakes on his coat, the boy answered:

"Oh, nothing, sir," seating himself by the fire, "only I overheard your talk this evening, and came over to see you. Yes, I am quite well," in answer to Mrs. Jones's inquiry, as she drew nearer the fire, and in her kind womanly way inquired if he wasn't very cold, and if he was well.

"Fingers cold?" asked the farmer, wondering what the boy was out for.

"Some," answered Joey, spreading his hands out, and going on quite rapidly: "You see, Aunt Alice is nearly broken-hearted about leaving the farm, and the girls will have to leave school; and if Harold works ever so hard he can only keep the interest up, besides getting a living, and there's nothing to save from. I heard Aunt Alice say so myself, and I just put on my coat and slipped out, and over here to see, sir, if you will give me time, and I will try and pay it up."

Grandma Jones had plied her shining needles fast and faster as the boy went on; she now let them fall into her lap, and laying her hand softly on the farmer's arm, said slowly, "You will give him a chance, father, won't you? Poor boy! he don't look much as if he was used to hard work."

"I am not," answered Joey, "but I think I can do some kinds, and I would like to try if he will let me, Mrs. Jones."

"How old are you?" asked Farmer Jones, with a quick look into the boy's face; "and what do you think you can do to lift a five-hundred-dollar mortgage?"

"Seventeen come June,"

"Seventeen, eh! You are not as strong as a boy of ten ought to be," and he knit his shaggy brows.

"But I am stronger than I look, sir, and if you will only try me I am sure I can earn the money some way in five years' time."

"Seen my woodpile; want to try your hand at that?" and he fixed his keen blue eyes on Joey, who to his surprise replied quickly:

"Yes, sir, thank you; when may I begin, and how many cords have you?"

Taken somewhat aback by Joey's ready answer, he replied: "Ten cords, and I will give you one dollar a cord. Begin when you are mind to; is it a bargain?"

"Yes, sir, and—if you please, will you give me a writing about the mortgage?"

An amused smile played for a minute about the farmer's lips, then drawing himself up:

"Oh, of course, boy, of course. I always make it a point to do as I agree, and he reached pen and ink from the table, and, after a few rapid strokes of the pen, pushed the paper toward Joey, who read it over, folded it up and put it carefully in his old wallet.

"How could you!" exclaimed his wife, as with a 'good evening,' the door closed on Joey.

"Well now, Martha, it's no use talking, I thought if he wanted to try, why, I would just let him begin on the woodpile; but I declare for't, if he does anything I am mistaken."

"But he will, though," said she; "didn't you notice the proud look in his face when I spoke of his father?"

"Well, yes, and so he was a good man, only he didn't know enough to keep his money; signed with Reed and lost the hull on it; died and left that youngster without a red cent. Tell you what, wife, I'll watch that boy, and if he is made of the stuff you think he is, why, I'll give him a lift; can't take our money along with us."

And farmer Jones resumed his paper, and his wife her knitting, inwardly wondering at the change that had suddenly come over her husband. For it was well known far and near he was a hard man, and no one was more sensible of it than his quiet, patient wife Martha.

CHAPTER II.

It was a cozy sitting-room Joey entered a few minutes later; a small table near the fire, beside which Aunt Alice, a fair-faced, brown-haired woman, was sitting, busily engaged with a basket of mending; on the opposite side was Harold, a sturdy young man of three and twenty, piling blocks for the little girl in his lap, whose ringing laugh now sounded clear and sweet, as the pile on the table toppled over and fell with a crash on the floor.

"Did you see it?" she called to Joey as he came in.

"No! but I wish I had. What was it, Rose?"

"It's the 'Tower of the Seven Knights,' sister Ellen says, and it was top heavy, Joey," shaking her curls and sliding down from Harold's lap, and going over to him.

"I have been over to see Farmer Jones," he replied to Aunt Alice's question as he lifted Rose.

"Over to see Farmer Jones!" exclaimed Ellen, throwing down her book. "Why, you never go there; thought you did not like him."

"So did I," put in Harold, "and I," echoed Aunt Alice.

"Well, you see, aunty," with a nervous glance at Harold, "I heard you speaking about the mortgage, and I thought it was high time I was helping to pay it; and the long and short of it is, Farmer Jones agreed to give five years' time and let me try to pay it. Don't laugh, Aunt Alice; you have not kept me at school so long for nothing, and besides I have a job of wood-cutting for Farmer Jones, and I mean to teach this winter. You're committee, Harold; won't you let me try?"

But Harold had to swallow something hard and dry in his throat before he could answer, while Ellen danced around the room, exclaiming:

"I will be real good and help Joey teach, if you will, Hal."

"Me, too!" chimed in Rose, patting his cheek.

"Well, girls, we will see what mother thinks of Joey's plan. I am glad you thought of it, Joey," and he took the paper from him.

"Here, mother, it's plain English enough," and he handed it to her.

"And five years' time to pay it off. How did you manage the old fellow, Joey?"

"I don't know. Guess it was his wife that did it. See here, girls, she sent you some nice apples," and emptying his pockets he left the room.

"Bless the boy," murmured Aunt Alice, as she heard him go up the old stairs.

The girls followed soon, leaving Harold and his mother to talk over Joey's success and decide about the school, which was in his favor.

"I will let him try," Harold had said, "for it is his doings, keeping the house over our heads five years longer."

"Yes," answered Aunt Alice, with a sigh, "how he is helping us. I remember how, when brother died, I did not see my way clear to bring Joey home. It seemed such a care, and now he is very willing to help. Yes, but for his doing we might have been left with small hope of paying the debt or saving our home. As it is, with his help, the way seems very much brighter."

CHAPTER III.

Morning dawned and found Joey, saw in hand, before Farmer Jones' door.

The wind had gone down. The bright sun peered over the mountain tops, lighting up hill and valley, and making all so beautiful that Joey almost forgot his work, as leaning against the long pile of wood, his eyes wandered adown the valley, resting first on the river, gleaming like silver in the morning light; then on to the snow-covered housetops, the towering mount-

ains; above all, the clear, blue sky, which gave promise of another lovely winter's day.

Farmer Jones was looking also upon the morning scene, and as from the window his eyes fell on the boy, he turned, lifted his cap, and began brushing away the snow, and very soon the noise of his saw was heard.

"He is at it already," exclaimed the farmer to his wife, as he turned away.

"Who? At what?"

"Why, the boy to cut wood, and he will get enough of it, too, I reckon; it's as hard as a rock—mean stuff for a boy like him," seating himself at the breakfast table and helping himself to a steaming roll.

"Cleared off nice," remarked Mrs. Jones.

"Yes; the sun shines. Guess I will be off over to the village for my new sleds. If you need anything, call that youngster in; and now I'm off, seeing I've eaten all the rolls myself," he remarked, thinking to himself, "that saw has spoiled Martha's breakfast. Don't see how women folks can be so soft-hearted when poor folks is around. 'Taint my way."

CHAPTER IV.

Five years have come and gone since our story began. It is summer now, everything is fresh and green. The birds sing merrily in the old elm by the small brown farm-house, from the open windows of which come the busy hum of voices, mingled with laughter, and now and then a song. The family are preparing for a visitor, who is to come on the morrow—even Joey, himself, who has been gone three years. Aunt Alice is busy in the pantry making pies, snowy bread and golden cake, for she expects a hungry boy. Ellen, now a tall, slight girl of seventeen—stands by the open window, clipping off the dried leaves from her favorite heliotrope, and humming a new air which she can hardly wait until her work is finished to practice. Still singing she leaves the window, and begins to dust and arrange the furniture to its best advantage, then opens the door just as a loaded wagon stops in front of the house. A boy jumps down, runs up the gravel walk, and with a "Good morning, miss!" asks if the Widow Reed lives here.

"Yes," answered Ellen, "will you walk in?"

"No, miss!" and he gave her a letter.

"Will you give this to the lady? I will wait here until you return," and he stepped inside the vine-covered veranda while Ellen went in search of her mother and gave her the letter.

"There must be some mistake, Ellen; I don't know this writing. Run and get my glasses, dear, and give the boy a chair."

"Yes, mamma," and off she darted.

Imagine their surprise on opening the letter to find a check for \$100, with a note running thus:

Will Widow Reed please accept this piano for her daughter Ellen, and let her begin lessons at once, and oblige

AN OLD FRIEND.

With exclamations of surprise and delight they hastened to inquire of the boy "Who sent it?" "Where he got it?" etc. But to their questions he gave no satisfactory answer, notwithstanding there was a roguish twinkle in his dark eyes, as he unloaded and helped Harold to set it up in the little parlor.

"If you could only give us some clew so we might try to thank him," Aunt Alice had said, as he drove off. "It's no use, he don't know," answered Harold, about the tenth time reading the note. "I have no idea who sent it."

"I would like to try it," said Ellen. "Sure enough, here's your music. Now give us a song," and soon the room was filled with melody. But Aunt Alice in the midst of their song, burst into a merry laugh as Rose, minus her hat and breathless almost, appeared in the doorway, dropping her basket of flowers, and looking from one to another in childish wonder. Then clapping her hands in glee, she bounded in shouting, "Hurrah! Oh, goody! goody!"

"Hush! Rose," exclaimed Aunt Alice, as Farmer Jones, hearing the music, "stopped in a minute to see what's going on," he said. For of late he had been a frequent visitor. And Ellen, with flushed cheeks and beaming eyes, showed him her present and the letter, and gave him a song. He seemed pleased, and remarked as he arose to go:

"Guess I will bring Martha over to see it, eh?"

"Yes, do," they all answered.

"When is the boy coming?" he asked.

"In the morning," answered Aunt Alice.

"Will you bring your wife over to tea tomorrow?" she asked, following him to the door.

"I must be off now, girls," said Harold, "so you may hurry and finish your work if you want a row on the river at sunset."

"Oh, dear! I can't hurry one bit," said Rose. "I am so glad, Ellen; and oh, he sent it, Ellen; he is so good."

"He! Who?" asked they both in chorus.

"Don't you know? Why, Farmer Jones, of course," answered Rose, with a toss of her yellow curls, "cause I met him as I was coming home, and he asked me if I had seen Ellen's piano." And she ran off to tell Aunt Alice.

And from that the secret came out. It was a happy group that welcomed Joey home the next morning. Even Aunt Alice could find time to spend an hour in the garden listening as he praised the neat white fence which Harold was just finishing, admiring her flowers, the new bird-house, the row of nice young trees in front; and then Ellen and Rose took him over the farm and down to the river, and back in time for dinner. Then the new piano was admired, and music followed, until later the table was spread for tea under the shade of the great

elm in the yard. And Rose hastened away, returning soon followed by Farmer Jones and wife, who greeted Joey heartily and joined them at the tea table—a bright, happy party.

"And so it's all paid, my boy," said Farmer Jones, as after tea was over Joey handed him a roll of bills. "Wife and I have kept track of you, and have seen how from cutting wood you went to teaching school, and finally into that store, working and studying all your odd time, till now the last cent is paid, and the farm free. And now, my boy, we are getting to be old folks, Martha and me, nigh on to 80; 'taint likely we will live long, and I can't say but what I have learned a lesson from you. And now Martha and I want to have you go to college as our boy, eh? Will that suit you? There, there, don't thank us, but accept our offer if you would please the whole family."

And they all laughed.

"Come Ellen, give us a song."

That evening the moon looked brightly down on Farmer Jones and his wife, as arm in arm they slowly crossed the field back to their own pleasant home. And its bright beams lingered on the sweet face of Aunt Alice, and the manly form of Joey as they sat in the doorway, listening, while from within came a soft prelude, and soon the voices of Harold and Ellen, mingled with the sweet, childish notes of little Rose, were heard.

A Prospector's Address to the Rocky Mountains.

(Written for the PRESS.)

O mighty range of peaks and glens!
Thy native muse inspires my pen;
I lay to rest the pick and pan
That I thy gorgeous scenes may scan.
The hidden vaults of glittering ore
That thou hast stood as sentinel o'er,
Since earth from out of chaos came,
Is not the spark that lights my flame;
The grandeur that mine eyes behold
Is more than all thy wealth of gold.
Though future generations may
Reveal thy trust to light of day,
And pierce thy heart for Mammon's pride,
Thy greater glories shall abide
With thee for aye, and none shall dare
Despoil thy contour high in air.
They cannot rob thee of the spell
That in thy towering crowns doth dwell,
Nor mar th' enrapturing scenes displayed
In placid pond or grassy glade,
Environed by thy cliffs and crags,
Where longing, loving memory lags.
No bard that once beheld thy grace
Could stand unawed before thy face.
The verdant vales below thee lie,
Thy snowy crowns doth pierce the sky;
Ere morning's sun has kissed the plain,
Thy crests present a golden chain.
The forests wild that gird thy sides,
The bounding game that in them hides,
The crystal waters laughing near—
All tend thy lover's heart to cheer.
When threatening clouds are hovering low,
Thy head above thy foot below,
The pealing thunders, lightning's flame,
May spend their force on thee in vain.
As some proud soul in human form,
Whose breast is bared to every storm
Of life, the sun's effulgent beam
Still shines above the mists serene.
When time was young, the earthquake's shock
That made thy very bosom rock,
And rent the granite fields in twain,
Exalted thee above the plane
And made thee all that thou hast been—
An artist's love! a poet's theme!
So may the spirit racked with care
Be come at last more sweet and fair—
Too pure to be by pen portrayed,
Too high to be on canvas laid,
O proud and peaceful monarchs, stand!
Emblem of life to mortal man!
In you a lesson each may read,
That brave and earnest men succeed;
Though tempests rave, there are heights sublime
Where scintillant suns shall ever shine.

Glendale, M. T. HENRY W. BROWN.

SUPPRESSING BRUTALITY.—Gen. Gonzalez, formerly President of the Mexican Republic, and now Governor of Guanajuato, has taken a bold and decisive step in decreeing the suppression of bull-fighting in that State. He declares that it is demoralizing, that educational interests and manufacturing enterprises suffer from the use of so much money in this barbarous sport, and that the habits of public order and economy are destroyed by it. Accordingly he orders the summary prohibition of bull-fighting in his State.

HOW FINGER NAILS GROW.—The growth of the nails is more rapid in children than in adults and slowest in the aged. It goes on more rapidly in summer than in winter, so that the same nail that is renewed in 132 days in winter requires only 116 in summer. The increase for the nails of the right hand is more rapid than for the left; it also differs for the different fingers and in order corresponding with the length of the finger. It is most rapid for the middle finger, nearly equal for two either side, slower for the little finger and slower for the thumb.

TRADES IN HIGH LIFE.—The late M. Carnot, father of the President of France, had two sons, both of whom, in view of the great uncertainty of conditions of life in that country, were taught trades, by which, in case of emergency, they might earn a living. The younger brother learned the locksmith's trade; the one now President of the French Republic is a carpenter.

YOUNG FOLKS' COLUMN.

"How the Biter was Bit."

(Written for the RURAL PRESS by I. H.)

There was going to be a festival in the Pine Hill schoolhouse, and great preparations were being made in all the houses in the neighborhood. The boys and girls were busy learning the pieces they were to speak and the songs they were to sing, while the mother and older sisters were equally busy baking pies and cakes, roasting chickens and turkeys, and making ready other good things for the supper.

Perhaps no one was more delightfully excited over the coming event than Jack Fortune and his sister Polly. Entertainments of any kind were rare in the country district where they lived, and even when a concert, or a circus, or an exhibition of magic enlivened the quiet little village, the Fortunes generally staid at home. There was little money to spare for amusements in a house where for many years there had been a constant struggle to pay off a heavy debt for the land they lived upon, and the children had early been taught lessons of self-denial. All the greater was their enjoyment of the rare occasions when they were allowed a little liberty. Of late everything had been going well with them; the last crop had been the finest known for years; hogs had brought a good price; even the ducks and hens had been doing their duty nobly, so when it was proposed to hold a festival in the schoolhouse to raise money to buy an organ, Mr. and Mrs. Fortune were very glad to do their part. And now the day had come, and Polly's new dress and Jack's new suit were ready, and each of them had a bright new half dollar to spend. Admission was free, but the supper was to cost 25 cents, and there were ice cream and candy and other extras besides.

Over Jack's happiness, however, there was one little shadow; his best friend, Tom Owens, had fallen out with him a few days before, and all on account of certain arrangements for the evening of the festival.

Just how it happened that Jack and Tom should be such firm friends it would be difficult to say; for Jack was a generous, warm-hearted little fellow, a favorite with everybody, while Tom was selfish and ill-tempered, liked by very few of his schoolmates except Jack. The trouble had arisen in this way: Their teacher, Miss Mason, was soon to be married, and as she was very much beloved by all her scholars, they had subscribed a small sum of money to make her a present. The present, half a dozen silver teaspoons, was to be given to her at the close of the literary exercises at the festival, and Jack Fortune had been chosen to make the presentation. The matter had been decided by vote, and Tom had been the other candidate. The fact that Jack had received 18 votes out of 20 had irritated and enraged Tom to such an extent that he had not spoken to Jack since, much to the grief of the boy who felt that he had done nothing wrong and did not deserve such treatment.

However, even Tom's displeasure was forgotten now in the eager anticipation of the evening's enjoyment. The family were seated at breakfast when Sallie, the oldest daughter, suddenly exclaimed:

"Jack, you're surely not going to the festival to-night with that head."

"Well," said Jack, looking up from his plate of cakes, "as I don't happen to have another, I guess I'll have to."

"Why, you look like something caught out of the woods. Mother, make him have his hair cut; it's away down over his ears!"

"Yes," said Mrs. Fortune, "it is dreadfully long. I didn't notice it before. Father, you must cut it for him before night."

"All right," said the father. "After dinner, Jack; I haven't time now." And he went away to his work. But dinner that day was a very informal meal; everybody had too much to do to care to keep regular hours. Jack was given a cold lunch about 11 o'clock and sent off on an errand, and being detained unexpectedly, he got home a little after three, to find that all the family had gone except little Polly. Mrs. Fortune and the older girls had to help to get the schoolhouse ready and set the supper-table. Mr. Fortune had driven them over in the spring-wagon and would not be back, and Jack and Polly were to do the chores, lock up the house and go over in the cart. In the hurry and confusion, no one had thought about "that head."

The first sight of Jack recalled it to Polly, who was herself exceedingly neat, and who was constantly trying to make her brother more careful of his personal appearance.

"Oh, dear," she exclaimed, "you didn't get your hair cut. What will everybody say when you go up to make your speech with that—"

"Now look here, Polly," interrupted Jack, "if you say 'that head' again, I'll take it off and throw it at you. You all talk as if a fellow had a box full of heads to wear at different places. I'm sorry my hair isn't cut, but I'm going to have a good time to-night all the same."

"Don't you think I could cut it, Jack?" asked Polly, a little uncertainly.

"You? Why you'd make me look as if the rats had got hold of me last night. No, thank you, I'll go just as I am. The only fellow that

knows how to cut hair round here is Tom Owens, and he's too mad with me now to do anything for me."

Polly thought for a little while in silence. Then she said: "Tell you what, Jack, I'll run over to the Owens' and see if Tom won't come and cut your hair. We can offer to pay him; we can give him two bits, and then I can pay for your supper and you can treat me to ice-cream."

"But that wouldn't be fair," said Jack, "it isn't your head."

"No, but it hurts me worse to have you look that way than it does you. So I'm going."

The distance to Tom's house was not so great, and in less than an hour Polly returned in high spirits. Tom would come as soon as he had finished the chores and dressed himself; she had given him the two bits to make sure. She was to get ready at once and go to the schoolhouse with Mrs. Owens and the girls, and Tom and Jack could go together later.

"I'm so glad," said Polly. "I want you to look nice; be sure to put on your new necktie. I'll get it out for you before I go."

In good season Tom made his appearance; he seemed to be in a particularly good temper, laughed and joked, and once he astonished Jack by suddenly clapping his hands on his knees and exclaiming: "By jingo! I'm in luck to-night! I'm just going to have the best fun of anybody in these diggins!"

The two boys went upstairs where Tom pinned one of Mrs. Fortune's aprons round Jack's neck, seated him in front of the glass and began his work.

"That side looks real nice, now, don't it," he said, when about half of Jack's long locks had been clipped, and he stood off at a little distance to admire the result.

"First rate," said Jack, as he looked at his reflection in the glass. "First rate."

Tom stepped to the window. "Gracious!" he exclaimed. "There's my mare trying to break loose; wait a minute!" He snatched up his coat and vest, which he had taken off, and ran down stairs.

Without a suspicion of the trick that was being played on him, Jack went to the window and opened it. He was just in time to see Tom untie the mare and jump into the saddle. "Tom! Tom! What's the matter? Where are you going?" he called in alarm.

"Ha! ha! ha! I've fixed you for to-night, I guess," shouted Tom, as he rode off with a gallop, while Jack screamed after him in vain: "Oh, Tom, don't go and leave me this way! Tom! Tom! I'll give you anything I've got, Tom!"

And then the poor boy seeing that all his entreaties were useless threw himself on the floor and burst out crying. No wonder; it was a cruel disappointment, for he knew that now it was impossible for him to go to the festival. Presently he sprang up and seized the scissors. He would cut the rest of his hair himself; but at the first glance in the looking-glass he gave way again to despair. Tom had done the work on one side of the unfortunate head so nicely that he could never make the other side look the same.

"Oh, why didn't I let it alone and go just as I was," he groaned. "Oh, Polly, Polly, what made you bring that hateful wicked boy here to serve me so!"

Meanwhile, Polly at the schoolhouse was making herself useful, and as one wagon after another drove up she began to watch for Tom and Jack; she could not be quite happy until she should see "that head" and be sure that it was all right. Presently Tom appeared alone, and she ran to him at once to inquire for her brother.

"Oh, I didn't wait for him," said Tom, carelessly; "you don't think he'll get lost on the way, do you?"

"Did you cut his hair, Tom?" asked Polly, anxiously.

"You bet!" said Tom with a loud laugh as he walked away.

Something in his manner made the little girl uneasy; but she could do nothing more. Surely Jack would soon come and then all would be well. Tom sauntered about the schoolroom where the seats were now beginning to fill up. He had refused to take any part in the exercises of the evening. His fun was to be in seeing the annoyance of other people and the disturbance of the program occasioned by Jack's absence.

Why was it that one and another of the girls to whom he spoke turned away and whispered to some one else and giggled as if very much amused? There could be nothing wrong in his appearance; he looked down at his neatly fitting suit, gave a pull to his vest, then put up his hand to smooth the ends of his necktie. His necktie! He had left it and his collar, too, on the bed in Jack's room, where he had taken them off because he felt too warm. Now, Tom, happened to have an exceedingly long and bony neck, and if there was any boy in the school who would present a ridiculous appearance dressed in his Sunday suit with neither collar nor cravat, that boy was Tom Owens.

A vivid consciousness that he was caught in his own trap came over him as he sneaked out of the schoolroom, not knowing whether to go home, or to try to find some one to lend him a silk handkerchief to tie round his neck. If he could do that, and pretend that he had a sore throat, he might still be able to get some enjoyment out of the evening. He hung about the ante-room hoping that he might chance to see some one who would help him, and there

Polly found him, half an hour later, when she came in with a very anxious face.

"Oh, Tom," she said, "what can have happened to Jack? It's almost time to begin, and he hasn't come."

"No, and he won't come to-night, you may bet your life on that," answered Tom, glad to vent his ill-temper on some one.

"Why won't he come?" Polly exclaimed in terror. "Oh, Tom, what have you done to him?" And then, with hardly a moment's pause, she sprang forward with a cry of delight, "Jack—Harry! Oh, where did you come from?"

But to explain Jack's appearance on the scene we must go back a little. Hardly had he dried his eyes, ashamed of having "cried like a baby" for any reason whatever, when he heard the sound of a horse's feet. Could Tom have relented and come back? He snatched up his hat and ran out.

"Hello!" called a merry voice, and answering, "Harry, oh, Harry!" Jack rushed down the garden-path and threw open the gate. It was his brother who was working for a blacksmith in a neighboring town, but whom no one had expected home to-night.

"Folks all gone?" asked Harry. "I had a great mind not to stop, but concluded I'd better. I'm sort of dusty; now we can go together. Sakes alive, Jack! What's the matter with your head?" and he laughed till his sides ached.

"Harry, please don't; please don't laugh at me," pleaded poor Jack, ready to cry again. "I'll tell you all about it; it was Tom Owens," and the pitiful tale was told.

"The mean, low-lived rascal," exclaimed Harry, "I'll be even with him as sure as I'm alive. But never you mind, Jack, I'll fix you alright in about ten minutes if you'll get the scissors and a comb."

"Can you? O Harry!" Jack's rapture was too great for further expression.

"Jim Jones and I have cut each other's hair for six months," said Harry, "and I guess I can make a good job of it. You go up to the girls' room and see if you can't find a bottle of hair oil or something while I put up my horse."

Harry was soon at work on the poor, unfortunate head, and whatever a city barber might have thought of his performance, it was highly satisfactory to Jack. While he clipped away he told his own story. "Mr. Benson was away this morning when a man came in with a very particular piece of work. Jim Jones thought we couldn't do it; but I wasn't going to see him carry it off to the other shop, so I said I'd try. I had just got it done when the boss came in, and he was awfully pleased, I tell you. When noontime came he told me the folks had been teasing him to come over to this festival and give something toward the organ. 'I guess you'd enjoy it more than I would,' he said, 'and see your folks besides, so you can take the horse and ride over and spend two and a half for me, and as much more as you like for yourself; so here I am, and a good job for you, too, Jack. Have you got any money?'" he added.

"Two bits," said Jack. "I gave Tom two bits to cut my hair."

"And he took it? Why, he's no better than a thief. But don't you fret, he'll give it back to you before he's much older or my name isn't Harry Fortune; and I'll get you to help me spend the boss's two and a half besides. This family can eat all the ice-cream they want, for once, free of expense."

Jack ran up to his room to finish dressing. What was that lying on the bed? He picked it up and then he laughed both loud and long. "Harry," he called out, "what do you think? Tom has gone to the festival without any collar or necktie. He left them here."

"A nice-looking bird he'll be," said Harry, "something like a crane. Served him right. I'm precious glad of it." So was Jack, for a moment. Then a battle was fought and a victory gained as noble as those you read of in your history. He took a collar-box from the table, laid Tom's collar and tie carefully in it and carried it downstairs. "I'm going to take them to him, Harry," he said. "I was so awfully miserable before you came, and I'm so glad now I can't bear to have anybody unhappy."

Harry might not have been equal to such an act himself, but he knew how to appreciate it in another, and he made no objection. So it was that when little Polly called out the names of her two brothers, and Tom Owens hastily turned round, he saw first Jack's smiling face and neatly trimmed hair, and towering above the tall, muscular figure of the young blacksmith.

For once in his life he blushed a burning crimson as Jack handed him the little box, saying simply "I'm glad I'm in time, Tom, there's your collar and your tie."

Just then a strong hand rested on his shoulder, and a voice quite pleasant and friendly to outward seeming whispered "Fork out the two-bits, sonny."

Tom fumbled in his pocket. "Take it," he said, sulkily, "I never meant to spend it."

"Oh no," said Harry, "of course not; but Jack does, so it is best to give it up. That is all I have to say to you just now. Later I may have a little bit of advice to give you." And when Jack was not by to hear, Harry found an opportunity to say to Tom, "That was a mean, rascally trick you played on a boy smaller than yourself. If he hadn't begged off for you I'd thrash you till you couldn't stand up. As it is I don't mean to forget it, and if ever you try

that kind of thing again I'll pay you out with interest, and don't you forget it."

The festival was a grand success; everybody was happy, everybody except Tom; but among all the glad young hearts there present I think there was none happier, and none that better deserved to be happy, than Jack Fortune's.

Danville, Cal.

DOMESTIC ECONOMY.

Canning Salmon, Etc.

EDITORS PRESS:—Will some of your readers please inform me through your columns as to the best way of canning salmon, also for canning corn?—A. E. B., Red Bluff.

CINNAMON ROLLS.—Take a piece of pie crust, roll it out, cut it into narrow strips, sprinkle with cinnamon, roll it up tight, put in a buttered pan and bake until brown.

CREAM PANCAKES.—Take the yolks of two eggs, mix them with half a pint of good cream and two ounces of sugar; fry as thin as possible in lard, grate sugar over them, and serve hot.

BEEF LOAF.—Two pounds of raw lean beef, one cup of rolled crackers, half teaspoon of salt, two eggs; chop all together, form into a long loaf, cover the top with small pieces of butter and bake one hour.

STEWED VEAL.—Lay a knuckle of veal in a saucepan with two blades of mace, an onion, a small whole pepper and some salt, with two quarts of water; cover it close, and let it simmer for two hours.

DOUGHNUTS.—One cup of sugar, one cup of sweet milk, two tablespoonfuls each of butter and lard, three eggs, three teaspoonfuls of baking powder, flour enough to roll wet. Cut into shape, and fry in boiling lard.

APPLE DUMPLING.—One quart of flour, one tablespoonful of lard, two teaspoonfuls of baking powder wet with milk; roll out an inch thick, and place on it eight apples sliced thin; put in pudding bag and boil one hour.

ROLY-POLY.—Roll out about two pounds of paste, cover it with any jam or marmalade you like, roll it over and tie it loosely in a cloth, well tying each end; boil one hour and serve, or cut in slices and serve with sauce over it.

SQUASH CAKES.—Sieve 2½ cups of cooked squash; add a pint of milk, two eggs, a teaspoonful of sugar, a pint of flour, two teaspoonfuls of baking powder and a little salt. Beat together until smooth and fry brown in butter.

GRAHAM BISCUIT.—Three cups of graham flour, one cup of wheat flour, two tablespoonfuls melted butter, one teaspoon of soda, two tablespoonfuls brown sugar, two teaspoons cream tartar, one-half saltspoon of salt, milk enough to mix and make into biscuit; bake in a moderate oven.

OMELET OF CHEESE.—Grate some fine cheese and beat it up in a dish with some eggs and a cup of thick cream or sweet milk, season it with pepper and salt, according to the saltiness of the cheese; have ready a frying-pan of hot butter, into which pour the above mixture and fry as an omelet.

TO SERVE COLD MEAT.—Cut or chop any kind of meat, season with salt and pepper and place in a mold. Boil the bones and bits of meat with an onion or two cut fine. When boiled enough, strain, dissolve one spoonful of gelatine, and add to it. Pour over the meat, and set away until the next day.

ALWAYS RELIABLE PIE CRUST.—Weigh five ounces of fresh lard, half a pound of flour, take a pinch of salt, and not quite half a teaspoonful of very cold water. Put the salt into the flour, rub the lard thoroughly into it, and mix it quickly with the cold water into a dough, and roll out. This quantity makes upper and under crust for one large pie.

RAISED GRIDDLE CAKES.—Take a quart of sweet milk, warm it enough to melt a large tablespoonful of butter, add two teaspoonfuls of salt and flour to make a pretty stiff batter. Dissolve one-third of a cake of compressed yeast in tepid water and stir it into the batter. Cover closely and keep in a warm place until morning, when fry on a griddle. If found to be too stiff, thin it with a little tepid milk.

CORN MEAL WAFFLES.—It is during the spring that the waffle-iron is generally brought out from its temporary seclusion. If, however, the iron happens to be a new one, don't count on it to supply you with respectable waffles the first or even the second time. The chances are that only the chickens will profit by these bakings. We do not know of anything except use that will keep a new iron from sticking. It should be first boiled in water with potato parings and hay, and then greased and set in the oven to burn off. Repeat this operation several times, and then experiment some time when you have another dessert to fall back on. Don't spare the grease, but use plenty of butter or sweet drippings, and have it smoking hot. Very nice waffles are made from one cup each of cornmeal and flour through which has been sifted one heaping teaspoonful of baking powder; add two tablespoonfuls of sugar and a teaspoonful of salt; the beaten yolks of three eggs, and 1½ cups of milk; then the beaten whites, and lastly a tablespoonful of melted butter. If sour milk or cream is used instead of sweet milk, substitute a half teaspoonful of soda for the baking powder.

The Week.

Since our last, showers have fallen in most parts of the State, varying in amounts from a sprinkle up to half an inch of water—the latter, however, being reported only from one point on the coast. About a third of an inch is the heaviest report from interior valley points. The shower has been generally welcome, for it was not heavy enough to hurt any mown hay, but the dispensation was too light to be much more than refreshing, helping somewhat grain on summer-fallow which still has subterranean moisture to draw from, but producing scarcely any visible effect upon late-sown grain which has no reserves and has about run its course, in many cases not even reaching a hay point. Our grain yield in all parts of the State, except on irrigated land, must be counted very small this year, and the subject of bag prices will be of very little interest to those who will have nothing to put in bags.

Fruit prices are still high and growers are selling rapidly. In well-cultivated orchards and on trees which have been well thinned there will be good-sized fruit, but probably trees otherwise treated will yield but medium or small specimens, except where irrigation

water is available. This year's shortage is, of course, worse, because of the under average rain of last year. The State will be in fine condition for a good soaking next fall.

Whims and Crotchets.

It is really worth one's while to be sick occasionally just to find out how many excellent remedies there are in the world. The readiness with which everybody offers advice to the sick or tells of some sure cure certainly gives a very edifying and pleasing glimpse into the goodness of the human heart.

Well, society is quite sickly, has a great many bad spells, and it is really amusing to see the number and variety of political doctors that are anxious to dose it with their nostrums. Every one has his hobby and is sure if society would take his medicine it would get well and live a long and useful life. We have men who propose to banish hard times by the abundant issue of paper money, others who would usher in the millennium by abolishing private ownership in lands; and still others who would quicken evolution and bring in the Lost Paradise by abolishing private ownership in everything. They scout the idea that they are political charlatans who give the people stones for bread and promises for votes. They assume the more showy name of socialistic reformers, venders of ancient nostrums under new names. But none of them go to the root of the matter. Acutely alive that something is wrong, they would remedy the ills of society by giving it a new coat of paint, or in other words they would put a conscience into it fringed with good manners by arbitrary legislation. That is, they would drive the devil out with a pitchfork. But all these agitators overlook the fact that all laws, customs and habits are the outcome of social conditions, and that if we would make the fruit good, regeneration must take place in the vitalities of the tree. Any other effort to heal the woes and ills of society would be as abortive as the man who tried to lift himself by tugging at his boot-straps.

The efforts of the earnest reformer should be addressed to three things: To relieve the wants and miseries of the destitute and reform depraved lives; to assist the overplus of the population in all the great crowded centers to escape where there is more room; and to teach prudence to the ignorant masses whose sole aim seems to be to multiply wretchedness and increase the generations of poverty and want. Now, whoever finds work for men starving for the want of it, by enlarging his business, starting in a new industry, cultivating wild lands or in some other way gives employment to the idle is a better reformer than noisy quacks and mountebanks who shriek their crotchets and nostrums on stump or platform in bad, bad grammar and worse logic.

That there is great need of practical help is apparent to every man and woman who is not so wholly centered in self as to be oblivious of what is around them. We have a great many very good people who are very anxious to save the wild men of the antipodes and are in a great fume and stew about protecting horses and dogs who never seem to cast a thought to the millions of our fellow-creatures who live in the slums and narrow, stenchful alleys of our cities, a life to which the naked freedom of the savage is happiness. They are dreadfully worried over the squalor and wretchedness of the poor in Peking or Cairo, but heedlessly pass the poor half-clad woman who shivers in the cold wind as she tries to sell papers at the Oakland wharf, and the lame and blind whose only means of existence is selling pencils or apples on the street. There can be no doubt that in every great center there is a deal of preventable evil, the full extent of which is known only to the few who have patiently studied the problem, but from the men with whims and crotchets who never touch the burdens of society with the tip of their fingers, Good Lord deliver us.

The Flowers at San Jose.

The floral fair at San Jose last week was, by all accounts, a wonder, a delight, and a success. The ladies of Santa Clara, with fine taste, judgment, energy, and persistent industry combined, achieved results, the like of which, we are assured, was never seen before—not even in San Jose.

On entering Horticultural hall the general effect of the warm, rich masses of color was pleasing in the extreme. Directly in the center a silver cross rose from a mound of rocks and roses; to right and left were floral models of the Conservatory of Music and the Stanford University, and beyond these down the length of the hall flowers followed flowers in groups of harmonized or contrasted colors, until they merged in the forest of pines that adorned the stage. While each design was in itself of great artistic merit, the supreme genius was that which disposed them so effectively as a grand whole.

One of the most noticeable designs was a model of the proposed Conservatory of Music—to aid whose building fund the festival was set on foot. This miniature temple, five by three feet and three feet high, and standing on a table 12 by 16 feet, was composed entirely of flowers. The foundation of the edifice was deep red, made of Giant of Battle roses. Above these rose walls, woven of dainty yellow Celine Forester and white Chromatella, a roof of Homer rosebuds and a spire of yellow marigolds completing the structure. The building stood in the midst of highly ornamented grounds, upon an elevation covered with deep green moss to resemble grass. Musical instruments fashioned from flowers brightened this mossy mound, and around the whole ran a brilliant border containing 50 varieties of roses. The words "Conservatory of Music," in white, pink and red rosebuds, appeared in front of the entrance. The conservatory was lighted from within, bringing out the effect of the stained-glass windows.

On the Berryessa table was a terraced garden of roses crowned with lilies, and roses fashioned into forms of lyre and harp were conspicuous among baskets of varied flowers.

The garden of Romeo and Juliet was filled with forget-me-nots, begonias, yellow jessamines, ferns, and palms; and trailing ivy and orange blossoms fell from the balcony, against which leaned a handsome ladder of white and moss-roses.

Peculiarly attractive and interesting was the table on which H. A. Brainard had arranged 84 species of California wild-flowers, all gathered within five miles of the city of San Jose.

One of the most elaborate exhibits represented the studio of an artist. The central piece was an easel of evergreens supporting a large picture, framed. The frame was made of marigolds and the landscape of masses of sprays. On another easel, the frame of the picture was of La France roses and the subject a basket of Cloth of Gold roses. Several handsome plaques adorned the walls, every part of them, frame and subject, being made up of flowers. One was a fruit-piece of oranges and bananas, another a spray of roses; several handsome rugs made of roses lay about the room.

The four walls of the "Drawing Room" were adorned with Lady Banksia roses, sprays of Indian fern, spruce, pine and redwood evergreen, while the frieze was built out with pampas-grass, wheat, barley and oats intertwined with sprays of evergreen and ivy. The room was completely furnished with sofas, chairs, tables, portieres, rugs, curtains, etc., all made of lovely exotics, ferns and grasses.

The chapel of the Leland Stanford, Jr., University, as it will appear when finished, was beautifully represented in flowers by the ladies of Mountain View.

A liberty bell of pure white roses with the clapper of contrasting red was one of the most striking of the decorations. So well were the roses that form it blended together that it seemed like one huge flower of perfect form.

One of the most unique and (considering the object of the fair) appropriate designs consisted of four bars of "Home, Sweet Home," written in the most exquisite roses—red, pink, cream and white. The large table, 8x16 feet, covered with moss, represented the open pages of a book, upon the leaves of which the music was written.

Among the other prominent booths, the Fairy Grotto, the Queen's Palace, the Vendome Parlor and the Winter Palace would receive extended notice, were not our limits this week too narrow to do them justice.

The evening entertainments were well patronized, and the March of the Titled Roses, amid showers of rose leaves, by 50 ladies and gentlemen in fancy costumes, as well as the drill and tableaux by two score "fairies" were brilliant and admirable.

The visit of General Fremont with his wife and daughter, which took place on Wednesday, called forth great enthusiasm; the Pathfinder and the ladies who accompanied him receiving a most cordial and touching welcome.

The entire fair was under the direction of Mrs. E. O. Smith, who was most ably assisted by Mrs. T. Kirk, president of committee of 100; Miss Percy Harris, secretary; Mrs. Searle, Mrs. Dr. A. J. Cory, Mrs. M. Gay, Mrs. F. M. Terry, and the many other ladies in charge of the booths, to all of whom the press of San Jose awards the meed of praise unqualified and unstinted.

Low Freights on Wheat.

The *Herald of Trade* of this city prints an interesting statement giving the following table of comparison of prices per cental for No. 1 white shipping wheat in this city, prices per quarter for just shipped and the rate of freights, iron vessel, per long ton, to the United Kingdom at the close of the month of April of each year for 11 years:

Year.	Spot.	Just Shipped.	Freight.
	s. d.	s. d.	s. d.
1878.....	\$2.00	55.	50.
1879.....	1.60	44.	45.
1880.....	1.90	53.	45.
1881.....	1.40	46.	85.
1882.....	1.65	48.	65.
1883.....	1.82½	47.	45.
1884.....	1.57½	40.	35.
1885.....	1.55	40.	36.3
1886.....	1.32½	35.	39.6
1887.....	1.75	38.	22.6
1888.....	1.36½	33.9	25.

It is truly remarked in connection with this interesting showing that the decided reduction the last few years in charters made the wheat industry in this State possible, for with a range to and above 40s. would, without a corresponding advance in the price of wheat in Liverpool, have sent prices for No. 1 shipping wheat to such low figures in this market as to have netted a loss to farmers. That which first led to a fall in charters was the demand for faster ocean service, and this called into existence lines of steamers having very large carrying capacity. With their more general adaption for the shorter routes that did not consume over a month in transit, sailers were forced into more distant service, which naturally caused an over-supply of the latter, necessitating a corresponding lower rate of freight.

One of the most encouraging features of this course of affairs is that even at the low rates which have prevailed, the ocean carriage business has been profitable to owners. The *London Economist* and also the *Statist* are authority for the statement that English ship-owners had an income last year of over \$100,000,000 from their investments. This in excess of losses by the element or from other causes, goes far to convince the skeptic that the ocean carrying service will not be excessively high, for so long as a good income can be derived from investments in ships, so long will they be built and kept in service.

But the low rates of freight to distant markets are only one of several factors which have kept our wheat industry alive in face of severe competition. Other factors are the greatly cheapened cost of harvesting through the introduction of improved machinery, and the low rates of interest at which growers have been able to secure money upon wheat stored in warehouse. Farmers have also been benefited to a certain extent by the over-reaching combination of dealers who have found themselves in the corner rather than the wheat.

To one who has watched the course of wheat in California for ten years, the present situation is a startling departure from the condition of affairs at the beginning of that period. Then there were extortionate ocean freights, exorbitant rates of interest and all combinations and conspiracies profiting the conspirators and crushing the farmer. Verily the world does move!

THERE are 75,000 tons of wheat stored at and about Vallejo.

On the Original Habitat of *Icerya purchasi*.

[Written for the RURAL PRESS by PROF. C. V. RILEY.]

In view of the international interest attached to the subject of this note, and to the fact that I made a brief communication upon it before the British Association at its late meeting in Manchester, some final conclusions upon it may be of interest to your readers.

My search for the original habitat of *Icerya purchasi* has led to much interesting correspondence with naturalists in different countries, and a number of side veins have been struck and followed up with important results. At the time of my communication to the PACIFIC RURAL PRESS of June 11, 1887 (reprinted in Bulletin 15 of the Division of Entomology), I was rather inclined to the opinion that *purchasi* might be a synonym of *sacchari* and that the original home of the species would turn out to be the Islands of Bourbon and Mauritius. The correspondence there published with Messrs. Trimen of Cape Town, Crawford of Adelaide, Kirk of Wellington and Baron Von Mueller of Melbourne, developed nothing to alter this impression, but rather confirmed it; and I was particularly anxious to get some exact information from the islands in the Indian ocean. The gentlemen whom I have so far addressed have been either too busy to attend to the matter or they have turned it over to others from whom I have not yet heard. In other ways, however, I have arrived at a definite conclusion contrary to the surmise of last June with regard to the identity of these two insects, and this conclusion was formed first from a study of Signoret's types in Paris and subsequently by a bit of roundabout correspondence which is of sufficient interest to be treated at some little length. I was very sorry to find, when in Paris last October, that my old friend, Dr. Signoret, was extremely sick and unable to give any attention to affairs, and, as he was at his country place, I had some difficulty in making an examination of his types; but, finally, through the courtesy of M. Fairmaire, I succeeded in making a study of them, and, although the specimens were for the most part pinned and dried and in poor condition for comparison, yet enough perfect material remained to make me quite positive that *sacchari* was distinct from *purchasi*. In the meantime, during my visit to Europe, another specimen of the old original lot sent by Dr. Icery of Mauritius to Signoret in Paris in 1874, or thereabouts, and which was the one sent by Signoret to Maskell in New Zealand in 1878, was received from Mr. Maskell and immediately forwarded across the Atlantic by Mr. Howard and later was brought back to Washington where it now remains probably the most traveled insect in any collection. This specimen also was in poor condition.

My second verification of the conclusion of non-identity was arrived at as follows: Mr. J. Horne, Director of the Botanic Gardens at Port Louis, Mauritius, replying to my communication, asking for particulars and specimens concerning the "Pou blanc" in Mauritius informed me that the insect was there also known as the "Pou anglais," and was supposed to have been described by an English entomologist many years ago as *Dorthisia seychellarum*. Reference to all accessible works failed to give me a clue to any such species of *Dorthisia*, and application was made to Mr. J. W. Douglas of England, who has monographed the genus, for information concerning the use of this name. Through his kindness I learned that the insect was briefly described by Westwood in the *Gardener's Chronicle* for Dec. 22, 1885. On consulting this article I found the insect figured both from a dorsal and a ventral aspect with also an enlarged representation of the antenna of the female. I saw at a glance that the insect was the same as that described by Signoret as *Icerya sacchari*, and that it was no *Dorthisia*. The "Pou blanc" is therefore *Icerya Seychellarum* (Westwood). The specific name was given to this insect by Westwood from the fact that the insect was received upon the leaf of a palm from the Seychelles islands.

The third verification was made in a roundabout way almost at home. Learning from Mauritius that Col. Nicholas Pike, United States Consul at that island many years ago, had, while in Mauritius, paid some attention to this insect, I wrote to Col. Pike who at present resides in Brooklyn, N. Y., and was much grati-

fied at receiving a long and interesting communication from him. Among other facts he stated that some 20 years since he deposited with a lot of other natural history objects a few specimens of the "Pou blanc" with Professor Louis Agassiz at Cambridge. I then wrote to Dr. Hagen who was at once able to place his hand upon the specimens mentioned by Col. Pike, and who most courteously forwarded three of them—all in admirable preservation, as they had been saved in alcohol. These correspond with Signoret's description and with Signoret's and Maskell's specimens and with Westwood's figures and description.

We are still, it will be observed, as far off as ever from any absolute knowledge as to the

history of insect outbreaks will appreciate this point.

The Recently Introduced Parasite of *Icerya*.

The notice in the PACIFIC RURAL PRESS of April 21st, entitled "Australian Parasites of the Fluted Scale," while essentially correct, calls for some remarks. The parasite in question was first reared by Mr. Frazer S. Crawford of the Surveyor-General's office in Adelaide, South Australia, from the fluted scale, in small numbers only. Specimens were sent nearly a year ago both to myself in Washington and to Miss Omerod in England. Owing to the fragmentary condition of the specimens received, the true generic position of the parasite has not yet been determined. During the past winter Mr.

reason that our *Icerya* has several times mentioned in print under the erroneous name of *Orthesia* or *Dorthisia*, in South Africa and in Australia as well as once or twice in this country. C. V. RILEY.
Washington, D. C., April 30, 1888.

A Monument to Audubon.

The Linnæan Society of New York asks contributions to assist erecting a monument to mark the resting place of John James Audubon in Trinity cemetery, New York City. The movement originated with the Academy of Sciences of that city and, we are told, has been met with much favor. The presenting of the enterprise for the favor and support of the public, has been confided to the committee appointed from the Linnæan Society of New York, who now issue their appeal.

We are largely indebted to Audubon for the present lofty standard of American natural history, his name has given inspiration to many, and the grandeur of his achievements in this department of science has produced a line of successors of which America is, and may well be, proud. Genius knows no national bounds, great men are cosmopolitan; in honoring Audubon, the American-Frenchman, the hunter-naturalist, the artist-ornithologist, the indefatigable and ardent lover of nature and depicter of her manifold beauties, we feel that all the world will heartily commend the project and rejoice at its successful conclusion.

The engraving on this page represents the proposed monument, which it will be seen calls to mind the leading features of Audubon's life-work. We have thought that there might be many on this coast who would like to share in the effort to signify the popular appreciation of the distinguished naturalist and his work. Contributions may be sent to L. S. Foster, Chairman of the Committee, care of Linnæan Society of New York, 11 West Twenty-ninth street, New York city. We are assured that a prompt acknowledgment of receipt of contributions will be made.

Sericulture.

The Ladies' Silk-Culture Society held a meeting on Thursday of last week at the rooms of the State Board of Horticulture. Dr. W. P. Gibbons, Prof. Hilgard, Wm. M. Noyes, Mrs. T. H. Hittell, Mrs. H. B. Williams, Mrs. L. E. Pratt, Mrs. S. D. Mayer and Mrs. O. M. Washburn were present.

PRES. GIBBONS stated that in accordance with the wishes of the society, as expressed at the March meeting, less than \$200 had been expended for trees during the past month. About 300 two-year-old mulberry trees and 1000 Japanese yearlings had been purchased at a cost of \$131.75, and planted at the Piedmont station, where there are now 11,000 trees and cuttings in the orchard.

OF 8000 eggs received from Japan, about 6000 have been hatched at the station, as well as 2000 eggs of the society left over from last year. About 2000 Japanese eggs will be culled out for seed.

DR. GIBBONS thinks it a good idea to wet the leaves while hatching, as silkworms seem to like water. He has treated worms in this manner and they flourished, contrary to the theory that dry leaves are required. He reported that \$2516.32 remain in the treasury to last the Society until July.

MONSTROUS ROSES.—The Stockton Mail says Herbert Baldwin, a well-known bookseller of that city, has a rosebush that produces flowers of extraordinary size. None of them are less than six inches in diameter, while the largest is nine inches, measured straight across. The flower is very deep. The petals are on a corresponding scale, the largest being about two inches long. They are similar in hue and texture to those of the red velvet rose, a bush of that variety having been used in the series of graftings which were made in experimenting. There were five graftings in all, and then seeds were planted from the last growth. The bush which produces the giants is one of the seedlings.

FLORAL FAIR IN SAN DIEGO.—The ladies of San Diego under the management of the Woman's Home Association, have a flower festival this week. The proceeds will be used toward the erection of a Woman's Home, on a five-acre lot, donated to them in the City Park.

DESIGN OF PROPOSED MONUMENT TO AUDUBON.

original habitat of *Icerya purchasi* outside of Australia, so that I am rather confirmed in my first conclusion that it is an Australian species, though I shall not be surprised if, in the course of the next few months, specimens turn up from Mauritius. There is a possibility that both the insects occur in that island, but, all things considered, it is much more likely that *purchasi* was introduced from Australia to the Cape of Good Hope, to New Zealand and to California. The reasons which lead to these conclusions are as follows:

1st. We do not know that *purchasi* occurs in Mauritius, Reunion or any of the neighboring islands, while we do know that it occurs in several parts of Australia.

2d. The insect made its first appearance in South Africa, New Zealand and California upon plants that are peculiarly and distinctively Australian.

3d. Although it may seem paradoxical, the very fact that the species does not appear to be very abundant or injurious in South Australia, is rather an argument for than against its being an indigene there. Any one who has studied

Crawford discovered that the same parasite also infests a very large Coccid belonging to Maskell's genus *Coelostoma*, even more abundantly than it does the *Icerya*. He has hence been able to rear the parasite in considerable numbers, and, at a suggestion from the office here, sent living specimens to Mr. Coquillett, and also, as he notified me lately, to Mr. Klee and Mr. Maskell of New Zealand.

Of the lot received by Mr. Klee, and by him sent to Mr. Koebele in Alameda, the latter reports that they were dead on receipt; while Mr. Coquillett writes that of those received by him direct from Mr. Crawford he was able to rear living parasites which were at once confined with *Icerya* for the purpose of endeavoring to establish the species in California. The success of this experiment is more than probable, and, if so, California will owe Mr. Crawford a debt of gratitude.

The correction of the statement that the second insect host of this parasite is an *Orthesia* is important, as *Coelostoma* is more closely allied to *Icerya* than is *Orthesia*, and as the statement is liable to create some confusion for the

ARBORICULTURE.

Shade Trees for California.

The public is indebted to the Sacramento Improvement Association for drawing out the observations of several experienced tree-growers of the capital city as to the adaptations of certain trees for planting in this State. Of course what is best for Sacramento is not necessarily best for some other parts of the State, but the remarks, which we shall reprint below from the report in the *Record-Union*, have a wide bearing.

The State Gardener's Views.

David Meldrum, the State Gardener, who has charge of the beautiful grounds around the State Capitol building, said he had been requested to prepare a list of trees suitable for street and avenue planting. He favored ornamental evergreens. Of the evergreens the magnolia grandiflora was a very fine ornamental tree. The Italian holly had a very bright foliage, was a beautiful tree and had a fine shape. The Portugal laurel was most beautiful for street planting; it had a beautiful foliage, long chains of white flowers, pleasing to the eye, and very fragrant. The araucaria excelsa was one of the finest ornamental evergreen trees in California. It is a native of Norfolk island, Australasia. There are two other varieties of the araucaria, the Bidwillii and the imbricata, that are also handsome ornamental trees and would do well in the Sacramento climate. The Grevillea robusta is a most beautiful sidewalk tree. It grows rapidly, is palm-like in shape, and is one of the handsomest lawn trees that grows. It grows to a height of 50 or 60 feet, and is quite hardy. The American arbor vitae is a fine tree, there being some excellent specimens of this species in Capitol Park. The Siberian arbor vitae is also a fine tree. The Sequoia sempervirens, redwood, a native of California, the "big tree," is excellent for sidewalk planting and much admired by Eastern visitors. The Lawson cypress and the Monterey cypress are both excellent trees.

Regarding deciduous trees for lawn or sidewalk planting, my observation is that there are a half dozen or more varieties that are suitable. The white elm (*Ulmus Americana*) and the cork elm, are both good. The Oregon maple is a fine tree, as is also the Norway maple. The latter grows well in Sonoma county. The tulip tree is a fine grower, has a smooth bark, and bears most beautiful flowers, and for an ornamental tree has few superiors. The Eastern yellow poplar and sugar maple do not do very well here. I would not recommend those or any other species that I am not acquainted with. The cost of these trees varies all the way from 50 cents to \$10 each.

Views of a Practical Florist.

F. A. Ebel, the well-known florist and nurseryman, was next called upon. He said in selecting deciduous shade trees he would by all means recommend the cork elm, as it makes the best and most symmetrical tree, is entirely free of insects and requires less care than any other large-growing tree. The horse-chestnut is a fine growing tree and no pruning is required. Then the European linden (*Tilia grandiflora*) requires, perhaps, a little more care in the beginning, but which amply repays by its beautiful foliage and fragrant blossoms in the early summer. The Norway, silver-leaved, sugar and variegated maple is also fine for shade trees. The tulip tree (not much known in this part of the country) is a beautiful, even-shaped tree, and requires no trimming whatever. Its beautiful flowers are produced on the tip end of the branches and resemble the tulip, from which the tree derives its name. I saw 50 or more of these trees, all of the same height, surrounding a small lake in central Germany (Hesse Cassel) and never have seen a prettier sight. Then we have the ash, beech, birch, China umbrella and other trees well adapted for this section.

Of evergreen trees he would recommend the magnolia grandiflora, familiar to everybody. Grevillea robusta, pepper tree, several species of acacias, also laurels, pittosporum, palms, pichardiana filamentosa, chamærops excelsa, phoenix canariensis and dactylifera, all of which, with proper planting and a little care in the start, will make a showy sight, especially if deciduous trees are planted alternately with the evergreen. In his opinion the deciduous tree, during the winter, when it is without foliage, is still a protector to the more delicate evergreen thus planted with it. The trees so planted should have plenty of room, and by the time the evergreen is large enough, the deciduous trees may be disposed of altogether.

As for mode of planting, a large hole should be dug for all trees; the top, or better soil, should be thrown into the bottom of the hole, and, if necessary, should be filled entirely with new soil. The cost of doing so will amply repay in the growth of the trees. With evergreen trees persons should take good care that trees are not stunted or pot-bound, as it will take a long time for them to get over it; in fact, healthy trees should always be selected, and the best way to accomplish this, none but an experienced person should be trusted with selecting them.

It is rather a difficult matter for me to speak of, as to give any rule or regulation for pruning is almost impossible. Different trees will need

different treatment, and if people in general will employ none but skilled hands to do it, there is very little danger that a tree will be ruined by pruning. The greatest trouble is that most people are the best pleased with the man who cuts off the most branches, they not knowing themselves what is right in regard to pruning trees. A close observer will find throughout the city that the most trees are spoiled by too much pruning. For example, a cork elm should be trimmed and shaped in the first and second years after planting. When that is done properly, the tree will take care of itself better. A person that knows nothing about pruning will spoil more in one hour than the tree will make good in five or ten years.

Mr. Williamson's Views.

Robert Williamson, the well-known nurseryman, and a member of W. R. Strong & Co., next added his views. He said he had been highly entertained with the remarks of those that preceded him. Their views were excellent, their selections admirable and their suggestions good. He said of all deciduous trees, however, he thought the cork elm the finest. It was a strong grower, symmetrical and uniform in its habits. The American elm was not uniform in its habits; one would be weeping, another upright and another straggling. He grew the cork elm from cuttings, and got uniform trees in every instance. The silver maple he regarded as a very fine tree. It had a uniform habit, and that was the beauty of a street or avenue, to have it all look alike. This committee, of course, cannot dictate what kind of trees shall be planted, and there will be as many varieties as tastes in the same block. What we should endeavor to do is to

Educate the People

Up to the fact that the best should be adopted, and then all on the same street plant that and none other. The Carolina poplar would do well in the lower or southern portions of the city. The handsomest tree in the city to-day is the China umbrella trees in Add C. Hinkson's yard, at Twenty-third and H streets. There is no trimming to be done; all you have to do is to get it up. The prettiest avenue I ever saw was one shaded with umbrella trees. If the tree is ten feet high, then it is ten feet across; if 20 feet high, then 20 feet across, and a perfect umbrella. It has a dense green foliage. If you want to make selections of evergreen trees, you must take the character of the soil into consideration. The excelsa araucaria wants a moist climate, but the Bidwillii will do well in this section. The Monterey cypress is a good tree, is cheap and can be obtained almost anywhere. The Monterey pine is another cheap tree, and will grow almost anywhere. The Grevillea robusta won't stand a cold snap or heavy wind. The sugar maple is a slow grower and is a failure here. The tulip tree grows slowly here, and not so luxuriantly as in Germany. The magnolia grandiflora may stand at the head of the list, as Mr. Meldrum says, but it is a slow grower and a very expensive tree. A tree from two to four feet high costs all the way from \$1 to \$2.50.

There is a tree that has been suggested to me by Mr. Gillet of Florida, and that is the wild orange. It is a beautiful tree, a rapid grower, hardy, and will stand more frost than the sweet orange, the fruit hanging on the tree for several months after it is ripe. The small boy will let them alone, for if he tastes one once he will never do so again. The fruit is large, and finer looking, if anything, than the cultivated varieties. Those who want a good cheap tree can do no better than plant cork, maples or palms. The California palm is the best, because it is hardy and a rapid grower. The suggestion of Mr. Ebel to alternate the deciduous trees with evergreens, is an excellent one.

The Florida orange, in my opinion, is the best tree we can possibly get. We can club together, get some of these colonies to go in with us, and get out a carload of 5000 or 6000 trees. I would like to see our streets set out with wild orange trees. In Jacksonville and other cities in Florida they have no other shade or ornamental trees, and the sight is truly beautiful, and if we had it here the sight would simply paralyze the Eastern visitor. They require no more, in fact not so much water, as other trees.

The blackwood acacia is a fine tree, as are also some of the pepper varieties, and they will do well in the eastern suburbs.

Mr. Williamson was asked how large the wild orange tree grew, and he replied those on the public streets in Jacksonville were 40 and 50 feet in height, of fine symmetry, never required any pruning, and no care. Their foliage is a dark green. The speaker gave some general views on tree-planting and pruning. He said Sacramento had a number of wood-butchers going around town hacking trees to pieces. They added nothing to the beauty of the trees, and did much to injure them.

A Weather Expert's Opinion.

Samuel Gerrish, a gentleman who has always taken a great interest in the cultivation of semi-tropical plants, was next called upon. He said: "The beauty of any city that makes pretensions to a semi-tropical climate is in its verdure in the winter season. If the trees that will grow equally well in a more northern climate are largely planted, they will present an uninviting aspect to tourists from cold climates. Therefore it is better for us to plant those trees that retain their green foliage during the entire year. If one were to be taken to the State

Capitol building and look over the city, he would see very little verdure on the trees. It presents a true winter aspect—trees with naked branches everywhere. It is true these trees are fine in summer, but in the coldest climate they are the same. If we boast of a semi-tropical climate, let us show travelers that we also grow semi-tropical trees.

"The habit of tree-trimmers and gardeners of treating semi-tropical evergreen trees as they would hardy deciduous trees is suicidal, for many of them have been killed by this method. Orange, eucalyptus, olive and all trees of their tender nature should be pruned in the spring, and not in the fall, to suffer from the cold and set back if not ruined. The olive tree is not a slow grower, as compared to the orange, is very hardy, and for a shade tree in the city is beyond question desirable, as it will root well and stand the winds. The magnolia grandiflora is also one of the very best. These three varieties are suitable for a moist, sandy or any kind of soil, but require water. The fan palm tree (*Chamærops excelsa*) is the most hardy of all palms; never had a leaf touched by frost in this city; grows rapidly, attains a height of 40 feet, and is elegant for a sidewalk tree. There are many others that would add to the beauty of the city. The pepper tree does well if planted where it can root in a stiff, dry soil, but is no tree for our wet seasons here, as it will not root, and blows down in any high wind.

"The 30 varieties of eucalyptus should furnish many specimens of this beautiful tree to decorate our streets. Let us by all means study this question and urge all our citizens to adopt the methods of our Southern brethren, and make our city smile in winter."

MYSTERIOUS FATALITIES.

What is it That is Killing so many Prominent Men?

The death of Kaiser Wilhelm, ex-Gov. Hoffman, Banker J. W. Drexel, Lieut.-Gov. Dorsheimer, Dr. Carpenter, Chief-Justice Waite and Genl. B. H. Brewster, in quick succession, and all from the same cause, a though having different names, is startling.

March and April are fatal months, not only for consumptives but also for many diseases more disguised but none the less fatal.

Gov. Hoffman had heart disease, Gov. Dorsheimer, apparently a strong, well, robust man, over six feet high, sickens and dies in four days of pneumonia.

Chief-Justice Waite meets the same fate and he was apparently the personification of vigor.

Drexel, the Philadelphia banker, and Brewster, ex-Atty. Genl., were suddenly cut off in the midst of great usefulness, by Bright's disease, and Dr. Carpenter, the well-known New York physician, suddenly died of Kidney disease, never having suspected that he was at all troubled therewith!

This reminds us of the case of Dr. Frank Hawthorn, of New Orleans. He was lecturing before the Louisiana university on the peculiarly deceptive character of Kidney disease and the methods of microscopical and chemical tests.

After having shown specimen after specimen of diseased fluids, and made very clear the point that kidney disease may exist without the knowledge or suspicion of the patient or practitioner, with gracious self-confidence he remarked, "Now, gentlemen, let me show you the healthy water of a strong, well man."

He applies the test!

He staggers!

"Gentlemen, I have made a terrible discovery! 'he gasps,' I myself have the fatal Bright's disease!"

In less than a year this specialist of the commonest and most fatal of diseases was dead. He was a victim of advanced Kidney disease, the presence of which in himself he had never suspected!

L. B. PRICE, M. D., a gentleman and physician of the highest standing of Hanover C. H., Va., four years ago, after trying every other remedy for Bright's disease, including famus mineral waters, cured himself by Warner's Safe Cure, and March 24, 1888, wrote: "I have never had the slightest symptoms of my old and fearful trouble."

MR. JOHN DOHERTY, of Concord, N. H., was given up with Bright's disease by the best physicians in 1879. He was in a dreadful state. After using and being cured in 1881 by Warner's Safe Cure, in 1887, he wrote: "I am better than ever."

JOHN CULLEMAN, Esq., 100 Gregory St., New Haven, Conn., was first taken sick in 1873, gradually run down until he had pronounced Bright's disease, rheumatism and all the other deceptive signs of kidney disease. The best physicians in New Haven could do nothing for him. He then began using Warner's Safe Cure, 200 bottles of which he and his family have used and he is cured.

W. T. CRAWFORD, proprietor St. Charles Hotel, Richmond Va., and well known all through the South, several years ago was in the death-agony from kidney disease, convulsions and Bright's disease. The best Philadelphia specialists in such diseases pronounced him practically dead and incurable. Everything else failing, he took Warner's Safe Cure abundantly and regularly, until fully restored to health, and now he says: "At a lapse of many years I am as sound as a dollar, with no symptoms of my old trouble. I owe my life to Warner's Safe Cure."

Kidney disease is the most deceptive, the most universal, the most fatal disease.

If the most learned men cannot know without the use of microscopical and chemical tests that they have kidney disease, how much more liable is the layman to be, unknown to himself, in the very jaws of death, who does not feel as well as formerly, but who does not think anything specially ails him, and whose physician may assure him that he will soon be "all right."

In these days, people recognize that it is wiser to prevent disease than to await its arrival to cure it. When you know that you may be in the greatest peril and not have any idea of the fact from any defined set of ill-feelings, the wisest course to pursue is to follow the counsel and experience above outlined, and thoroughly renovate the system, cleanse the blood, tone the nerves and insure your own life against these common mysterious fatalities.

Lands For Sale and To Let.

Miramonte Colony

— IN THE —

GREAT ARTESIAN BELT,
KERN COUNTY.

This tract comprises 2640 acres, all level land and ready for the plow.

In this colony is the

Greatest Artesian Well in the
World,

And a perpetual water-right goes with the land bought. Tracts of 20 acres will be sold for \$500—only one-third cash; balance, one-third in two years, and one-third in three years, with ordinary interest.

Apply at once for best selection to

C. H. STREET & CO.,

Successors to Immigration Association of California,

“PLANO” TWINE BINDER

IS FAMED FOR ITS

Lightness, Durability, Simplicity and Capacity.

Price 5 feet.....\$200

Price, 6 1/2 feet.....\$210

The Light-Running All Steel “Plano” Twine Binder, 5 1/2 & 6 1/2 ft. Cut.

WE HAVE A CERTAINTY ON THESE POINTS OF SUPERIORITY:

There is not even one experiment about it.

The wear is very slight and is easily taken up.

It does not get out of order, for it is well made.

It is an economizer of twine, and does not strain the band.

The size of bundle is most easily regulated.

Tightness of bundle is most easily regulated.

It binds either long or short grain with equal ease and certainty.

Each bundle is completely separated, even in tangled grain.

It is perfectly automatic and needs no attention, except proper oiling.

PALM VALLEY!

TROPICAL WONDERLAND!

EARLIEST FRUIT LAND IN THE WORLD.

EARLIEST VEGETABLE LAND IN THE WORLD.

FINEST WINTER CLIMATE IN THE WORLD.

DO YOU WANT to buy a fine tract of land at a low figure, that will double in value in three months, and that will produce a crop in six months that will more than pay for the land?

DO YOU WANT a tract of land that will produce ripe grapes six weeks in advance of any other section of California now cultivated?

DO YOU WANT a tract of land that will raise watermelons that will ripen seven weeks earlier than they will in any other section in the State, and that will sell for a dollar apiece in Los Angeles, Riverside, San Diego, San Bernardino, San Francisco, or any other Pacific Coast town or city?

DO YOU WANT a tract of land where there is practically no frost?
DO YOU WANT a tract of land where no hard wind strong enough to blow fruit from the trees is ever known?

DO YOU WANT a portion of the tropical valley of the State?
DO YOU WANT to quadruple your money on short notice? There is a chance for you to do it.

THE PALM VALLEY LAND COMPANY

Has secured 2000 acres of this choice land; has subdivided it into 5 and 10-acre lots, which they are now selling at \$175 per acre, with a PERPETUAL WATER RIGHT, sufficient to irrigate the land.

The lands were placed on the market with the announcement that as soon as each hundred acres were sold, the price would be advanced \$25 per acre, and that this rule would be followed up to the selling of 500 acres. One hundred and seventy-five acres have now been sold on this basis, starting at \$150 per acre. The price is now \$175 per acre. The price will be advanced to \$200 per acre as soon as the second 100 acres is sold.

The Company has a Stone-walled Irrigating Canal, over ten miles in length, completed.

They are building a railroad from Seven Palms, a station on the main line of the Southern Pacific Railroad, to PALMDALE, the town site owned by the Company.

They are planting 160 acres to an orange grove, of Navel oranges, and many other improvements are now in progress, that will make this one of the most attractive Colonies in the State. No safer place for the investment of capital, and no more delightful place to live in the winter can be found.

PALM VALLEY is sure to become the greatest sanitarium in the world.

THERE IS NO FROST, NO FOG, NO HARD WINDS.

There is here all that can be desired to make Palm Valley one of the most attractive places in Sunny Southland. Maps, circulars and further information by calling on or addressing

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE! FERTILIZE!
NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KERRIS—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.

BERKELEY, Nov. 20, 1886.

Dr. J. KERRIS, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

The Effect of Parasites on the San Jose Scale.

B. M. LeLong, Secretary State Board of Horticulture, has received the following letter from A. Scott Chapman, State Horticultural Commissioner of Los Angeles. Mr. J. W. Wolf-skill and Mr. Alex. Crow of Los Angeles having noticed the progress of the San Jose scale, at Los Angeles, were for a time at a loss to account for its seeming disappearance, a close examination revealed the fact that they were being killed by a minute parasite. Last week Mr. Crow and myself visited a place on Jefferson street, in the southern part of the city, where the pear trees were last year very badly infested, some of them having died, now they are looking green and thrifty, and much of the new growth is two feet long. It is hard to find a living specimen of the scale, and many of the dead scales show little holes in them where the parasites have hatched. Mr. Crow says that the parasite is the same as the one that works on the willow scale.

CYPRESS WOOD.—It is demonstrated by actual experiment that cypress is admirably adapted to the building from top to bottom, inside and outside. It is a wood that stays where it is put, makes close joints, finishes handsomely, and works as well in every respect as white pine, though perhaps not quite as easily. For siding, cypress should be selected so that there shall not be rough spots in the grain. A careful throwing out of the rougher pieces will obviate a bad appearance that might be caused by a careless carpenter.

Cattle at Auction.

We have at Sacramento, Cal., 52 head of strictly choice, unregistered Shorthorn heifers, all one year old, nearly all solid red, weigh about 800 pounds. They were all bred on our own farms for several generations, and are practically pure bred. For individual merits see the heifers; they speak for themselves. These heifers will be sold at public sale on Friday, May 18th, at the fair grounds at Sacramento, to the highest bidder for cash. Cattle on the grounds for examination. This will be a rare chance for our cattle men to sort up their herds for any purpose.

WM. P. HIGENBOTHAM,

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., Room 3.

METEOROLOGICAL REVIEW.—We have received from Sergeant James A. Barwick, of the U. S. Signal Service, a copy of the Annual Meteorological Review, with notes on the resources of California for 1887, compiled by him for the State Board of Agriculture. With the many tables of temperature and rainfall, and Elwood Cooper's treatise on olive culture—which is included—it makes a volume of 230 pages. In the letter submitting it to the Secretary of the State Agricultural Society, the Sergeant says he has endeavored to keep out of his work "flowery descriptions of every little hamlet," and to give a general idea of the resources of each county represented. It is a very timely and valuable publication.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office.

S. H. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, May 9, 1888.

Continued activity has been the characterizing feature of the week in all farm products, but particularly in fruits and vegetables. The weather the past week was of a more favorable character for both growing and maturing crops of fruit and grain. The failure of W. T. Coleman & Co. for about \$2,500,000, with a strong probability that the assets will not reach over \$1,000,000, although given out at over \$4,500,000, has a depressing temporary influence on fruits, etc., for canners use. Both English and Eastern wheat markets have ruled strong. To-day's cables are as follows:

LIVERPOOL, May 9.—Wheat—Very inactive. California spot lots, 6s 6½ to 6s 9½d; off coast, 34s; just shipped, 34s 6d; nearly due, 34s 3d. cargoes off coast, steady; on passage, inactive; French country markets, firm; wheat and flour in Paris, quiet; wheat on passage to Continent, 434,000 qrs; wheat and flour on passage to U. K., 1,191,000 qrs.

Foreign Review.

LONDON, May 7.—The *Mark Lane Express*, in its review of the British grain trade, says: Native wheat is firm. There is a fractional advance in provincial markets. The rates for country flour are maintained. Barley, oats, beans and peas are scarce and prices favor sellers. Prices of foreign wheat in London are against sellers. Russian wheat declined 6d. White wheats are firmer. Corn is in demand at ½d per cwt. advance. Linseed on spot declined 1s. At to-day's market wheat was inactive. Flour was steady. No corn was offered on spot; mixed American, to arrive, is quoted at 25s 9d ex ship.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Date.	Cash.	May.	June.	July.	Aug.
3.....	97½	98½	99½	99½	99½
4.....	98½	99½	100½	100½	100½
5.....	99½	100½	101½	101½	101½
6.....	100½	101½	102½	102½	102½
7.....	101½	102½	103½	103½	103½
8.....	102½	103½	104½	104½	104½

The closing prices for wheat have been as follows, at Chicago:

Date.	Cash.	May.	June.	July.	Aug.
3.....	82	81½	82½	83½	83½
4.....	81½	81	82	83	83½
5.....	81½	81	82	83	83½
6.....	81½	81	82	83	83½
7.....	81½	81	82	83	83½
8.....	81½	81	82	83	83½

NEW YORK, May 9.—Wheat—98c for cash, 95½c for May, 94½c for June, 95½c for July, 94½c for August and 94½c for Sept. 1st.

CHICAGO, May 9.—The closing quotations of wheat are: June, 85½c; July, 86½c. Corn—May, 56½c; July, 55½c.

California Products at Chicago.

CHICAGO, May 5.—The supply of foreign oranges is about exhausted, and there are but very few coming in. The stock of California fruit is liberal, while consignments are arriving constantly. Choice medium-sized fruit sell moderately and rule steady, but the very large fruit is not cared for, and common small oranges are dull. The market is easy at the following prices for California fruit: 140, 176 and 200 to the box, \$3.25 and \$3.50; odd sizes, \$3 and \$3.25; seedlings, \$2.25 and \$3; Navels, fancy, \$5.50; common, \$3.50 and \$4.25.

The California dried fruit supply is considerably smaller than some time ago. There are still a good many plums and prunes left, but there are moderate offerings of other descriptions. The latter sell freely, while the first named are slow. We quote: Apricots, sun-dried, ½ lb, 10½c@11½c; bleached prime do, 13c; do, choice, 14½c@15c; do, fancy, 15c@16c; evaporated, choice to fancy, 14½c@16c; peaches, sun-dried, ½ lb, 11c@12c; do, evaporated, unpeeled, 13c@15c; do, peeled, 20c@22c; plums, unpeeled, ½ lb, 6c@9c; do, pitted, 10½c@11c; prunes, small, ½ lb, 6½c@8c; fancy large, 10c@12c; raisins, loose Muscatels, 2-crown, ½ box, \$1.35@1.45; do, 3-crown, ½ box, \$1.50@1.65; do, London layers, ½ box, \$2.25@2.40.

Hops are steady and meet with a fair demand, and as stocks are very moderate there prevails for choice grades a firm market. Common qualities are quiet and tame. Pacific Coast, choice, 13c@14c ½ lb; common to prime, 11c@12½c.

New California potatoes are coming in freely and sell at \$2@2.25 per sack.

New cabbages from California rule slow, the heads being too large. They bring \$2 per cwt.

Gloomy Wheat Estimates.

NEW YORK, May 5.—The *Herald* prints a great many dispatches from the wheat regions, and in a summary estimates that there will be a deficit in the crop anywhere from 50,000,000 to 80,000,000 bushels. The decrease in California is estimated at 50 per cent.

Miscellaneous.

NEW YORK, May 7.—There has been no movement of moment in hops, but prices are quoted as steady. State new are selling at from 9c@13c; Pacific, 8c@12c; German, 10c@22c.

Raisins maintain their position. The sales are moderate in extent, but the movement is active enough for the light supply. Three-crown best are quoted at \$2.05.

Local Markets.

BAGS—The market is slow and weak for Calcuttas at 6½c@7c for June-July delivery.

BARLEY—The market held strong at full prices up to Tuesday when a lower range set in for options, but holders of actual barley would not sell at the lower bids. Futures dropped on Call about 5c. To-day's sales are reported as follows:

Morning Session: Buyer 1888—200 tons, \$1.02½; 300, \$1.02½; 400, \$1.02½; 500, \$1.02½; 600, \$1.03; 100, \$1.03½; 100, \$1.03½; 100, \$1.03½. Seller 1888, new—1000 tons, 92½c; Afternoon Session: Buyer season—100 tons, 88c. Buyer 1888—100 tons, \$1.04; 300, \$1.05; 100, \$1.04½; 300,

\$1.04½, 300, \$1.04½; 600, \$1.04½; 100, \$1.04½ per cwt.

BUTTER—The market is very strong. There is a decided change in opinion regarding the future. The impression is that the season will be short, and consequently there will be a light pack. In this market buyers are paying full quotations.

CHEESE—The market at the lower quotations is steadier. The demand is increasing.

EGGS—The tone of the market is stronger, with the tendency upward under a good demand and decreasing stocks.

FLOUR—The market is strong at full quotations.

WHEAT—Parcels of the better grades are hard to get in straight parcels. Holders are indifferent sellers. In futures, trading on Call the past week was light. The fluctuations were unattractive. At to-day's Call the sales reported are as follows:

Morning Session: Buyer season—100 tons, \$1.43½; 500, \$1.43½. Buyer 1888—200 tons, \$1.59½; 300, \$1.59½. Afternoon Session: Buyer season—100 tons, \$1.44; 300, \$1.43½. Buyer 1888—600 tons, \$1.61½, 400, \$1.61; 100, \$1.60½; 800, \$1.60½; 100, \$1.60½ per cwt.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to May 7 '87.	July 1 '87 to May 5 '88.
Flour, qr. sks.....	3,820,360	3,218,900
Wheat, cts.....	11,600,669	7,909,745
Barley, cts.....	2,093,376	2,047,803
Oats, cts.....	126,034	147,600

Potatoes, sks.....	137,702	81,581

Cereals.

In giving the market on flour the New York Produce Exchange Reporter gives the following: English shippers are as a rule unable to fill their orders, their limits not permitting them, they allude to the large imports into the United Kingdom and express some surprise that their chief markets, Liverpool, London and Glasgow, have been so well maintained under the very large home and foreign supplies. The future of their markets very largely depends upon the shipments from this coast, and they promise to fall off in June and July. Eighty-five per cent of the surplus of the last moderate crop of wheat will be converted into flour before the middle of June, and with the growing crop fully 18 days later than the average of the last 10 years, we shall be compelled to draw on the reserves, and these are quite certain to be exhausted before the close of the cereal year, hence the lateness of the season is becoming more and more important daily. It seems to us that the public as a rule do not realize the gravity of the situation. With warm weather and copious rains all over the winter wheat States from time to time during May, our apprehensions for the growing crop would in some measure be lessened, though there is a large area under winter wheat in Ohio, Indiana and Illinois, that rains in May will do no good, while a very considerable area would be benefited by heavy rains and warm weather. The mean temperature in these States the past two weeks has been far too low for the wheat plant to develop, hence a late harvest is inevitable.

In a later report the Reporter says: The past 3 days we have been surfeited with crop reports from the winter wheat States, a large majority of them unfavorable to the crop and we cannot doubt that the injury to the plant has been serious; the lack of rain and the low, mean temperature have prevented the development of the plant in the chief winter wheat-producing States, and in many localities the plant has been killed, so that we are compelled to reduce our estimate of the probable yield to 69 per cent of an average yield west of Pennsylvania, but east and south of Ohio the crop promises better than last year, but the area last referred to produces a small per centage of the crop of winter wheat. Correspondents referring to the invisible supply, say: It is one-quarter to two-thirds of the quantity held last year. Large purchases have been made at the Northwest this week for the winter wheat States. The Minneapolis *Daily Market Record* of April 24, says: About one-quarter of the seeding has been done in Minnesota, but it will be general throughout Minnesota and Dakota the last of the current week. Reserves in farmers' hands and in elevators are much lower than usual, and a larger acreage of oats, barley and flax will be sown in Minnesota, Dakota, Iowa and Nebraska, and wheat acreage will be decidedly decreased. Prime reports the winter wheat crop has run down in every State in the winter wheat-belt the last 10 days. Toward the close the longs evinced a desire to realize, and with rains at the Southwest a weaker feeling has been reported at the chief Western markets.

J. E. Beerbohm's London *Evening Corn Trade List*, of April 13, says: The extraordinary lateness and extreme coldness of the present spring in Europe, is giving rise to serious apprehensions among pessimists that it will, as "R. W." forecasts, be followed by a cold summer, in which direction, indeed, all past experience leads. Weather prophets go back to 1879 to find an equally cold and backward spring, and argue that as in 1879 so in 1888 will the summer be unfavorable, and short crops will be the result. In 1879, when the springtime was both cold and wet, thus differing from the present season, which has not been wet; the crop of wheat was perhaps the smallest within living memory, and the apprehension that 1888 may possibly be like unto 1879, premature and far-fetched as the comparison is, has doubtless, in conjunction with the prospect in America, unless the outlook improves, of a shortage of about 5,000,000 qrs. in the crop in that country, helped to stiffen the hands of wheat holders.

The London *Miller* reckons the wheat supplies and requirements of the United Kingdom for the months of April, May and June as follows, farmers' deliveries being taken the same as last year, and estimated Russian shipments covering 8 weeks from the Black sea and 4 weeks from the Baltic:

	Qrs.
Total supplies.....	5,048,549
Requirements.....	6,375,000
Deficiency.....	1,316,451

In plain words, our graineries by the end of June bid fair to be practically exhausted of foreign wheat reserves.

Oregon advices report the crops improved by rains both in that State and Washington, but notwithstanding this the wheat outturn is not expected to be more than 80 per cent of last year's yield. The movements to market of the surplus from the 1887 crop is slower, owing to the better prices abroad, at the East and in this city, causing holders to ask more money.

In this State advices report that the cool weather of the past week has been of great benefit to the growing plant. Many fields of barley, wheat and also of oats are being cut for hay, to be summer-fallowed. The plant in nearly all sections is reported not to be high to what the average season brings it, but then the cool weather, unless there are hot winds before maturing, will cause the grain to fill out well.

The stock of wheat in the State, notwithstanding the light export demand, is melting away under a steady home demand, chiefly for milling. The high price ruling for bran and middlings causes millers to convert larger quantities of wheat into flour than they otherwise would.

The past week witnessed a dull and inactive market for wheat, so far as the shipping demand is concerned, but some sales were made to parties who sold futures on Call. There is very little strictly No. 1 white wheat to be had, while milling grades are equally as scarce. The bulk held is off grades.

There can be no doubt but this year's barley crop will not be more than 75 per cent of last year's, while the consumption is not only fully 25 per cent more, but steadily increasing. The stock in this city is not large, considering the heavy receipts and the large quantity required to meet Call Board sales, while the supply in farmers' hands and in interior warehouses is small, owing to the large consumption. From all information at hand, it is safe to state that fully 20 per cent of the fields of barley that would have given a fair average crop have been cut for hay. Sales the past week of both feed and brewing grades have been fair, trading having to a certain extent been restricted by the firmness of holders and the limited offering of the better grades. Last year the bulk of the Oregon barley was damaged by rain; this year the crop promises to be bright.

In oats, the past week witnessed fair trading at steady prices. Stocks are not large, neither is the supply to draw from. Choice grades are scarce and only obtainable by bidding well up.

Corn has held strong throughout the week. Choice grades are scarce and held at full prices. The demand has been only fair.

Rye is firm and in fair demand at full quotations.

Feedstuff.

For ground feed, the market is very strong, with a good demand for the season ruling. Bran and middlings are unchanged, but the better grades of ground barley and feedmeal are firmer.

Hay is reported to be quite general. More fields of grain are being cut for hay, but notwithstanding this, the outturn will hardly equal last year. A large proportion of the hay will be short, owing to the plant being stunted by season of the dry weather. The market holds very strong at full prices. The consumption demand continues quite free.

Vegetables.

The market for garden truck is quite active, with the more backward kinds beginning to put in an appearance. Beans are weaker. Asparagus is generally firmer. Peas are subject to daily fluctuations, with canners cleaning up the market when prices go sufficiently low. Summer squash is in better supply, as are cucumbers, but tomatoes are in light receipt. Cabbages are easy, with fewer going forward to Chicago and other points east of the Rocky mountains.

New potatoes are steadily improving in size and quality. Poor are hard to sell, but large and the better matured are wanted. Shipments to Missouri river distribution points are continued quite free. The crop in this State and Oregon promises to be large.

In onions, the market is firm for the better and more choice selected. Cut onions and new onions favor buyers.

Fruits.

J. Durney of Alameda shipped the first currants of the season to this market. They sold at \$1.50 per drawer. Daily shipments will soon be in order from many different points.

Gooseberries continue slow under free receipts.

Apricots are coming in more freely but they do not find much table custom owing to the high prices asked. The crop in the State will not be more than two-thirds of last year's. For future delivery contract prices named range from 2½ to 3c, but at the close the failure of W. T. Coleman caused more offish feeling, which will doubtless prove temporary, for "cots" are considered too much of a luxury to allow canners to pass them by, besides this driers will take them quite freely.

Strawberries come in freely; prices fluctuate from day to day. The crop this year will be very large, as will the crop of all other kinds of berries.

In answer to the writer's request to send information regarding crops, prices, etc., the following has been received from Watsonville:

Cherries will be an average crop. Apricots—Royals will be a fair crop, but of Moorpark there is a total failure. These are the only varieties raised here to any extent. Peaches will be a full crop and of fine size. Of plums and prunes there will be a good crop; apples and pears a fair crop. We hear of 3c being paid in some sections for apricots but then no buyers have been in this locality. A good many tons of fine "cots" could be brought in the neighborhood of Green Valley and Corralitos, five or six miles north of Watsonville.

It is very hard to get prices paid by cannery men and their agents. One of the late sales given is the entire crop of an orchard at 2c per pound for pears, plums, peaches and apricots, so as to get the latter. The buyer thinks he got a good bargain and the writer believes it also.

In dried fruits there is nothing new to report. Stocks, both here and at the East, are with a light but steady call ruling. Bright colored are wanted.

In raisins the stock is about exhausted. Prices are stiffening.

Live-Stock.

Bullocks continue easy under a fair selling pressure. Feed in the valley ranges is growing scarce, causing many herds to be driven back into the mountain ranges. Mutton sheep are easy with more offering for sale. After this month about all the large bands will be back in the mountain ranges, when better prices are looked for. Lambs and calves are without essential change. Desirable sized hogs are wanted, and if in good condition they will fetch full top figures. Milch cows are slow. In horses, there is a good inquiry for general utility animals, single footers, driving animals and matched teams. Prices are about as heretofore quoted in this department.

The market for dressed meat is quotable as follows by slaughterers to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed and one-half from the price of grass-fed, that is, animals running at large).

HOGS—On foot, grass-fed, 6½c@6¾c ½ lb.; dressed, 9½c@10c ½ lb.; soft, 6c@6½c ½ lb.; dressed, 8½c@9c ½ lb. Stock hogs, 3½c@5c ½ lb.

BEEF—Stall-fed, 8c@8½c ½ lb.; grass-fed, extra, 7½c@8c ½ lb.; first quality, 7c@7½c ½ lb.; second quality, 6½c@7c ½ lb.; third quality, 5c@6c ½ lb.

VEAL—Choice, 9c@10c ½ lb.; fair to good, 7c@8c ½ lb.

MUTTON—Wethers, 6c@6½c ½ lb.; ewes, 5c@6c ½ lb.; lamb-spring, 8c@9c ½ lb.

Miscellaneous.

Wool continues inactive, owing to buyers holding off. In England, prices to-day are higher than in this country for the same grades of wool. The opinion gains ground that manufacturers have formed a kind of trust to keep prices for American wools down, so as to equalize the cost of wools, owing to the necessity of having to import certain grades, or, in other words, they pay more for foreign wools, besides paying the duty, than for American wools, so their manufacture goods will not cost so much.

In hops, there is nothing new to report. Choice grades are hard to get. Eastern advices report the crop outlook both at the East and abroad as very favorable.

Beans are slow, but firm.

Sugars will, it is claimed, be higher soon.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	417,107	233,210
In port, disengaged.....	56,597	118,851
In port, engaged.....	10,361	3,862
Totals.....	484,065	355,923

To obtain the carrying capacity, add 60 per cent to the tonnage.

Tonnage on the way to Oregon, 15,077; tonnage at Portland, Oregon, loading and to load, 19,114.

Total tonnage, 34,191.

Fruits and Vegetables.

Consumption Surely Cured.
To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

FLOUR MILL
—WITH—
Immense Water Power FOR SALE

At Merced Falls, Merced County, located on Merced River; size of Mill, 35x70; two stories in front and four stories in rear; latest improved roller machinery; new capacity; 100 barrels per day; power to increase to any capacity desired; title to water and land perfect; 60 acres of land, comprising the town site of Merced Falls; reputation of flour is A1; commands all mountain trade; fine wheat country surrounding; no failures ever known; grain warehouse 80x80; four dwelling houses; 28 shares of Merced Falls Woolen Factory go with purchase. Price, \$60,000. Address

WIDE AWAKE
SUNDAY SCHOOLS

Are not satisfied with singing "as it happens," but take pains by classes and rehearsals, to prepare their young singers for solos and choruses, for Sunday and for festival singing. For such Schools, Ditson & Co. provide the best music by the best of composers.
CHILDREN'S DIADDEM, 30 cents, \$3 per dozen, Abbey & Munger. The newest book, full of very sweet songs, and well fitted to succeed their other successful books.
VOICES OF PRAISE, 40 cents, \$4.20 per dozen Rev. Charles L. Hutchins. A handsome book of great merit and highly recommended. Dignified, yet brilliant hymns and tunes.
NEW SPIRITUAL SONGS, 35 cents, \$3.60 per dozen. Rev. E. A. Hoffman and J. H. Tenney. More than 50,000 sold. New edition, condensed and improved.
SONG WORSHIP, 35 cents, \$3.60 per dozen. L. O. Emerson and W. F. Sherwin, both distinguished "Sunday School Composers."
SINGING ON THE WAY, 35 cents, \$3.60 per dozen. Jewett & Holbrook.
SONGS OF PROMISE, 35 cents, \$3.60 per dozen. Hoffman and Tenney.
Why not send for specimen copies (mailed for retail price), or for specimen pages (free)?
